TOTAL EUR 12	
1993/94	163 913
1992/93	197 676
Average 1988/89-1992/93	177 360

The harvest in 1993/94 was appreciably lower than in 1992/93 (17% less), whereas in relation to the average of the last five wine years the reduction was less significant (-6.6%). This drop affected all the Member States: it was more marked in Portugal (-37.3%), Germany (-26%) and Spain (-22%). In terms of types of products, and compared again to 1992/93, the decline in production particularly affected table wines (-20%) and was only limited in the case of quality wines psr (-7.8%).

## II. Utilisation (other than "intervention" distillation)

Total utilisation (EUR-12) in 1993/94, which is made up of human consumption, industrial uses (including production of grape juice and wine-based brandy), losses and the net balance of exports to non-member countries (but not including "intervention" distillation) came to 159 899 000 hl, ie. 4 000 000 hl less than in 1992/93. This decline was due to lower grape-juice production and to a reduction in the quantity of wine distilled for wine-based brandy production with a registered designation of origin.

### 1. Human Consumption (1 000 hl)

WINE YEAR	TOTAL	QUALITY WINE PSR	TABLE WINE	OTHER
-----------	-------	------------------	------------	-------

1988/89	135 899	44 536	82 130	9 233
1989/90	127 374	44 966	73 487	8 921
1990/91	132 582	49 014	75 057	8 511
1991/92	127 554	45 550	73 710	8 294
1992/93	129 016	49 271	71 443	8 302

AVERAGE				
1988/89- 92/93	130 485	46 667	75 165	8 652
1993/94	128 633	50 503	71 466	6 664

In 1993/94, consumption (EUR-12) was 128.6 million hl, much the same as in the previous wine year but 2% lower than the average for 1988/89 to 1992/93. In some non-producer countries, human consumption is increasing slowly but steadily. This is true for Denmark and the Netherlands. By contrast, human consumption has been falling in the main producer countries for several years. Nonetheless, it is important to distinguish between quality wines *psr* and table wine, because of the upward trend in consumption of the first type of wine (50 503 000 hl in 1993/94, up 8.2% in relation to the average over the last five years), whereas consumption of table wine is falling (71 466 000 hl, down 5% over the same period). This evolution is explained partly by the recognition given to new names (which moves table wines into the category of wines with a registered designation of origin) and partly by the fact that consumers are increasingly tending to prefer wines in the category of registered designations of origin, i.e. "appellation d'origine".

## **2. Industrial utilisation**

Industrial uses include quantities intended for use in making brandy with a registered designation of origin, i.e. 6.711 million hl of wines in the category "Other", and for the manufacture of juices (4.932 million hl), vermouths (2.184 million hl) and vinegar (1.059 million hl).

Overall, these industrial uses absorbed 14.886 million hl, a figure in line with the average for the period 1988/89-1992/93.

## **3. Distillation under Community rules**

Distillation under Community rules involved 21.2 million hl, consisting of 18.2 million hl for obligatory distillation (including 9.6 million hl for preventive distillation) and 3 million hl for market-support distillation, i.e. 12 million hl less than in 1992/93.

The break-down of quantities for distillation is as follows:

ITALY:	13 950 000 hl (12 150 000 hl obligatory distillation, 1 800 000 hl support distillation)
SPAIN:	3 400 000 hl (3 000 000 hl and 400 000 hl)
FRANCE:	2 950 000 hl (2 550 000 hl and 400 000 hl)
GREECE:	900 000 hl (500 000 hl and 400 000 hl).

## **4. Imports and exports**

Most trade in wines is intra-Community (70% of total trade). In wine year 1993/94, Community exports to non-member countries accounted for 12.3 million hl, i.e. 17.7% more than in the previous year, while imports from non-member countries went up by only 6%, to 3.5 million hl. The main exporting countries were Italy (4 million hl), France (3.1 million hl) and Spain (2.4 million hl). The main importing countries were Germany (1.4 million hl) and the United Kingdom (1.3 million hl).

The share of Community trade in world trade is approximately 73.6%.

### III. Stocks

Stocks fell appreciably with the help of distillation, lower production and a net increase in exports.

Total stocks at the end of the wine year came to 108.5 million hl, a drop of 14.75 million hl. Stocks of EUR-12 table wine went down by 20% to 38.5 million hl, which represents 6 months of normal utilization; stocks of quality wines prs went from 73.4 million hl to 68.9 million hl.

### IV. Conclusions

The 1993/94 wine year was marked by lower production, a stabilization of human consumption and a noticeable revival of exports. However, none of this alleviated the problems of market management due to the structural disequilibrium which the wine sector has suffered from for several years. Despite the favourable economic climate, more than 21 million hl had to be distilled owing to the large accumulated stocks.

Lasting control of production as well as quality assurance and the promotion of wine products remain the top priorities to be pursued.

The draft Regulation reforming the common organization of the market which has been presented to the Council by the Commission is based on the principle of directing Community expenditure towards adjusting supply to match demand instead of financing the disposal of surpluses, by means of multi-annual regional adjustment programmes for the wine-growing sector. This would entail, amongst other things, a simplification of the distillation regime, a policy of enhancing quality and the promotion of wine itself.
