PRICE AND COST COMPETITIVENESS

ECFIN/C-1

Third quarter 2002

Quarterly data on price and cost competitiveness of the European Union and its Member States

PRICE AND COST COMPETITIVENESS

The format of the series “**price and cost competitiveness of the euro area and the individual Member States of the European Union**” has been modified. In order to improve our assessment of the competitiveness of the euro area and individual Member States, the database has been disentangled from the assessment part. This allows for a timely presentation of the Database on price and cost competitiveness for the euro area, for each Member State, as well as for five other industrial countries (United States, Japan, Norway, Australia, and Canada¹). The second component offers an analytical rather than a purely descriptive assessment of the main features of the euro area and the individual member States’ price and cost competitiveness. This assessment will be made twice a year, while the quarterly update of the database is maintained.

The **nominal effective exchange rate (NEER)** of a country (or currency area) aims to track changes in the value of that country’s currency relative to the currencies of its principal trading partners. It is calculated as a weighted average of the bilateral exchange rates with those currencies.

Changes in cost and price competitiveness depend not only on exchange rate movements but also on cost and price trends. The **real effective exchange rate (REER)** aims to assess a country (or currency area’s) price or cost competitiveness relative to its principal competitors in international markets. It corresponds to the NEER deflated by selected relative price or cost deflators.

Countries in the euro area share a single currency and there is no longer any exchange rate between them. For these countries, the terms “nominal effective exchange rate” and “real effective exchange rate” have been replaced by the terms “**trade-weighted currency index**” and “**relative price and cost indicators**” but the underlying concepts and their calculation remains the same. The trade-weighted currency indices for individual countries using the euro may diverge because they have different trading patterns. In addition, the relative price and cost indicators may evolve differently due to diverging price and cost trends.

A comprehensive assessment of developments in cost and price competitiveness should ideally draw on various measures of the real effective exchange rate. Most international trade is in manufactured goods and some widely used measures focus on **unit labour costs in the manufacturing industry (ULCM)**. However, in-house labour costs account for only a limited share of total costs in the manufacturing industry. The sector purchases a growing amount of inputs from the rest of the economy, including financial services, marketing, accounting etc. In addition, an increasing amount of services are traded internationally. Therefore, some prefer to consider developments based on **unit labour costs in the whole economy (ULCE)**. Moreover, capital costs account for a sizeable fraction of total costs. Price measures such as the **GDP-deflator (PGDP)** include the return on capital. On the other hand, the measures based on ULCE and PGDP cover many sectors whose output is neither directly nor indirectly traded. The report also displays real exchange rates based on the deflator of private consumption, and the deflator of exports of goods and services (PX).

This series is also available on the Internet. Our Web site² permits the downloading of standard statistics to your PC or Macintosh. Moreover, differently defined nominal and real exchange rates are available upon request. A technical annex provides further details.

| IC | 24 industrial countries |

PART 1

MAIN DEVELOPMENTS

DEVELOPMENTS IN THE COST COMPETITIVENESS OF THE EUROPEAN UNION, THE UNITED STATES AND JAPAN

MAIN FEATURES

The euro against major international currencies:

- Over the third quarter of 2002, the euro appreciated by 7% against the US dollar, 1% against the Japanese yen and the pound sterling, and stayed stable against the Swiss franc.
- All in all, the nominal effective exchange rate of the euro against the currencies of 12 industrialised countries appreciated by about 4% compared to the second quarter and stood, at the end of September 2002, about 4% below its inception-level (monthly data). Over the third quarter, the dollar depreciated by 3% in effective terms, while the nominal effective exchange rate of the Japanese yen appreciated by about 4%.

Relative cost and price indicators: international developments

- The appreciation of the euro exchange rate led to a slight deterioration of the cost competitiveness (based on ULCE) of euro area producers (against 12 industrialised countries) of about 4% in the third quarter of 2002. Nevertheless, the euro still displays a total gain of around 10% since its launch, and is about 12% below its long-term average.
- Due to the depreciation of the US dollar against the euro, the real effective exchange rate of the USD depreciated by 7% over the third quarter vis-à-vis the euro area, but is still 20% above its long-term average. On the contrary, the depreciation of the yen led to an improvement of the price and cost competitiveness of Japan that now stands below its long-term average.

Relative cost and price indicators: intra-EMU developments

- Over the *last two years*, the Netherlands, Spain, and Portugal saw a deterioration in cost competitiveness relative to EMU partners. In these countries, cost and price pressures are related to their strong cyclical position and partly to a catching-up process. In contrast, moderate wage increases or weaker cyclical positions led to an improvement in intra-EMU cost competitiveness in France, Germany and Austria.
- In a *longer term perspective*, intra-EMU cost competitiveness is better than its 1987-01 average in Austria and considerably better in Finland, but this large deviation is related to the economic shocks that occurred in the early 90s, including the collapse of trade with the former Soviet Union. The current position in Portugal, Greece, Spain and the Netherlands is considerably worse than their long-term average.

Relative cost and price indicators: Member States outside the euro area

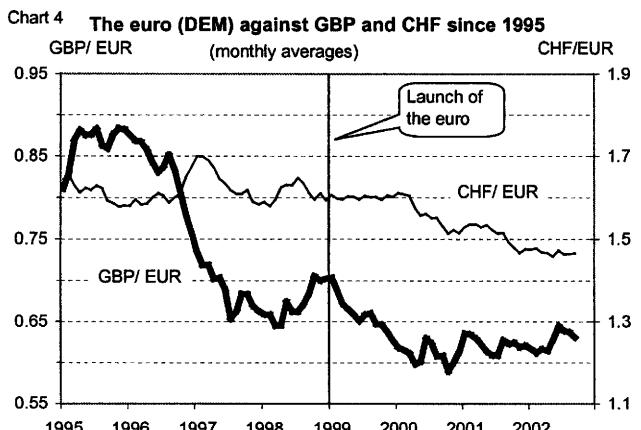

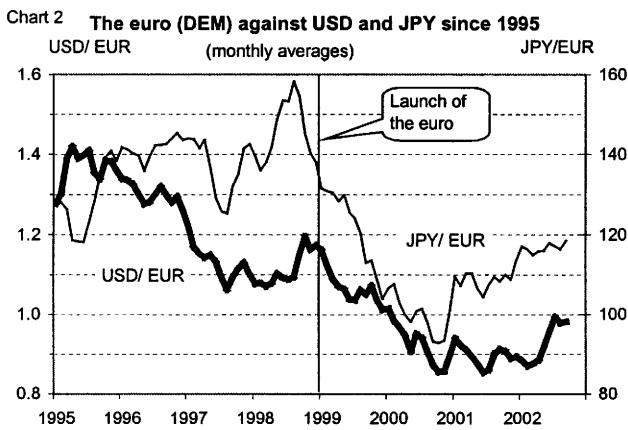

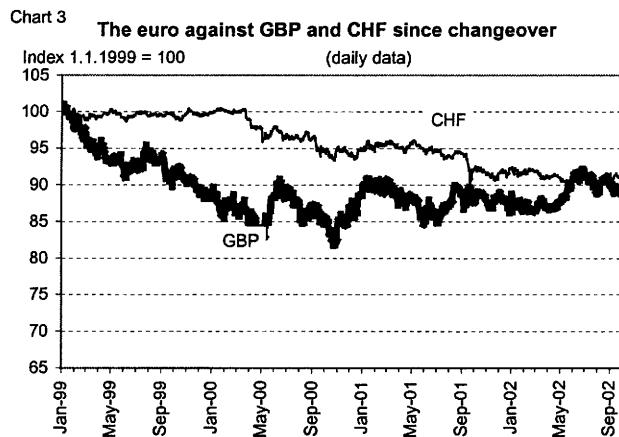

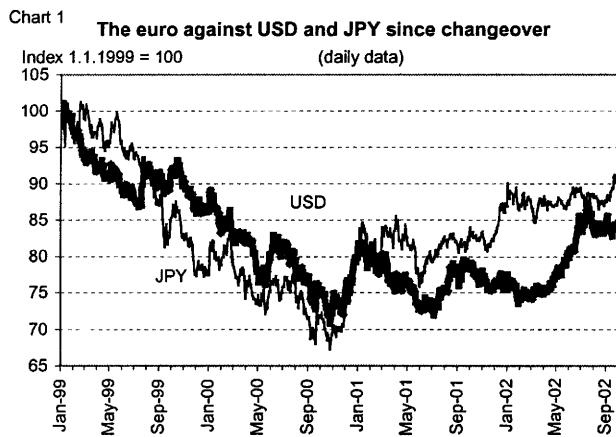

- Over the last two years, the Danish price and cost competitiveness experienced a small deterioration against the euro area (as wages are less moderate than in the euro area) that led to a position about 6% above its 1987-01 average. Even if Sweden experienced a small deterioration of price and cost competitiveness over the last year, it is still in a favourable position as it stands some 10% below its historical level.
- Despite an improvement over the last two years, manufacturing cost competitiveness in the UK remains about 27% below its 1987-01 average relative to the euro area.

DATABASE ON PRICE AND COST COMPETITIVENESS

QUARTERLY REPORT - THIRD QUARTER 2002

I. INTERNATIONAL DEVELOPMENTS

1. BILATERAL EXCHANGE RATES OF THE EURO

Note: EUR rates before 1999 calculated on the basis of DEM rates.

Note: EUR rates before 1999 calculated on the basis of DEM rates.

TABLE 1: EVOLUTION OF THE MAIN BILATERAL EXCHANGE RATES

| | During the third quarter of 2002 (monthly averages) | | | Relative to the previous quarter (quarterly averages) | | |
|---------|--|-------------------|----------|--|------------------|----------|
| | Average Jun-02 | Average Sep-02 | % change | Average Q2-02 | Average Q3-02 | % change |
| USD/EUR | 0.955 | 0.981 | 2.7% | 0.919 | 0.984 | 7.0% |
| JPY/EUR | 117.8 | 118.4 | 0.5% | 116.5 | 117.3 | 0.7% |
| GBP/EUR | 0.6440 | 0.6306 | -2.1% | 0.6286 | 0.6352 | 1.1% |
| CHF/EUR | 1.472 | 1.465 | -0.5% | 1.465 | 1.464 | -0.1% |

II. DEVELOPMENTS WITHIN THE EUROPEAN UNION

Within the euro area, diverging movements in costs and prices may change the relative cost competitiveness positions of euro area Member States. Table 5 and Chart 10 show three measures of the real effective exchange rate of individual Member States against EUR12. The different measures do not always give a uniform picture of the movement over time in the real effective exchange rate of a given country against its partners and, as such, the indicators of cost and price competitiveness need to be interpreted carefully.

In some cases, deviating price and cost trends among euro area Member States could lead to a build-up of competitive imbalances which might ultimately hamper economic growth and cause unemployment in individual Member States. In other cases, however, longer-term changes in relative prices and costs may be justified by changes in economic fundamentals related e.g. to a catching-up in the level of economic development, changes in non-price competitiveness factors, or changes in underlying savings and investment patterns. Moreover, differences in cyclical positions may cause movements in relative costs and prices in the short term. An in-depth assessment of movements in real exchange rates therefore requires a comprehensive analysis of the economic situation in each country seen in a longer term perspective. This report merely provides a descriptive overview of movements in intra-euro area cost and price competitiveness indicators.

TABLE 5: RELATIVE COST AND PRICE INDICATORS OF INDIVIDUAL COUNTRIES RELATIVE TO THE EURO AREA (EUR12)

| | Over the last year (Q3-02 / Q3-01) | | | Over the last two years (Q3-02 / Q3-00) | | | Relative to 1987-2001 average (Q3-02 / Average 87-01) | | |
|------------------------------------|---------------------------------------|------|------|--|------|------|--|-------|------|

| Spain | 0.4 | 1.4 | 1.0 | 1.7 | 3.5 | 2.5 | 3.3 | 11.2 | 2.9 |
| France | -0.9 | -0.5 | -0.8 | -1.4 | -2.3 | -1.9 | 0.1 | -5.9 | -3.1 |
| Ireland | 3.7 | 2.1 | 2.6 | 6.6 | 1.4 | 5.2 | 5.6 | -22.5 | 15.3 |
| Italy | 0.2 | -0.5 | 0.4 | 0.1 | -1.2 | 0.6 | -4.2 | 0.0 | 1.2 |
| Netherlands | 2.4 | 1.3 | 1.1 | 5.9 | 6.1 | 4.3 | 11.5 | 7.5 | 7.1 |
| Austria | -1.3 | -1.6 | -0.2 | -1.7 | -3.0 | -0.7 | -1.1 | -9.1 | -0.5 |
| Portugal | 0.9 | -0.5 | 0.9 | 3.6 | -0.4 | 3.3 | 15.1 | 4.6 | 16.4 |
| Finland | -0.9 | -0.8 | -0.7 | 2.0 | 3.5 | -1.4 | -9.8 | -17.2 | -6.6 |
| Non-euro area Member States | | | | | | | | | |
| % Change | ULCE | ULCM | PGDP | ULCE | ULCM | PGDP | ULCE | ULCM | PGDP |
| Denmark | 0.0 | -0.7 | 0.5 | 1.4 | -3.2 | 0.7 | 6.8 | 2.2 | 6.1 |
| Sweden | 1.8 | 1.6 | 2.3 | -8.5 | -8.7 | -9.0 | -3.1 | -13.2 | -9.6 |
| UK | -2.3 | -2.2 | -2.1 | -2.3 | -3.0 | -3.1 | 23.0 | 26.9 | 18.0 |

Note: relative ULCE and ULCM for Italy relative to any period before 1998 are distorted by the 1998 tax reform which shifted taxation from labour costs to value added but did not significantly change competitiveness.

A minus means an improvement in cost competitiveness.

Chart 10 : Price and cost indicators for individual countries relative to EUR12

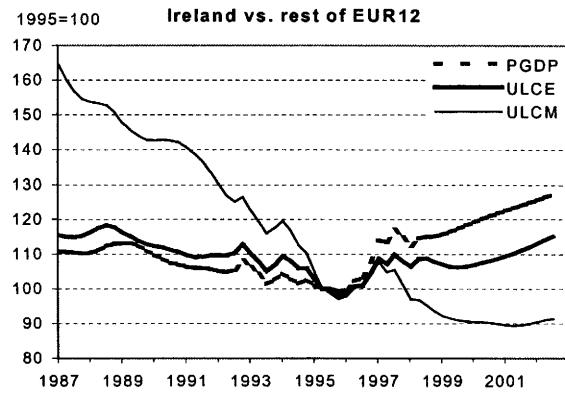

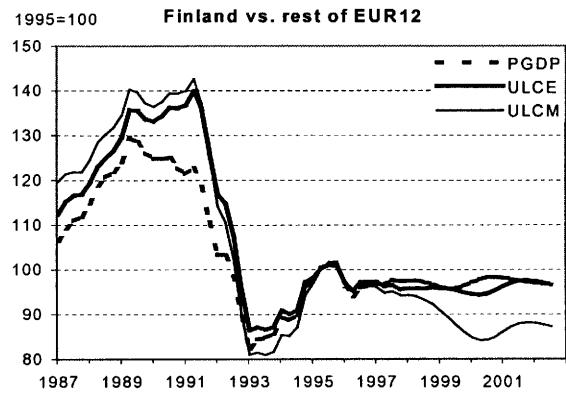

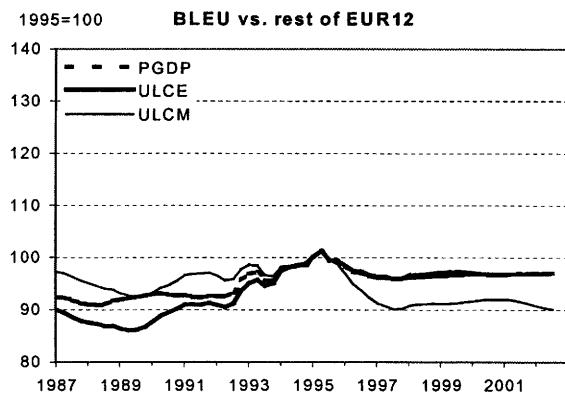

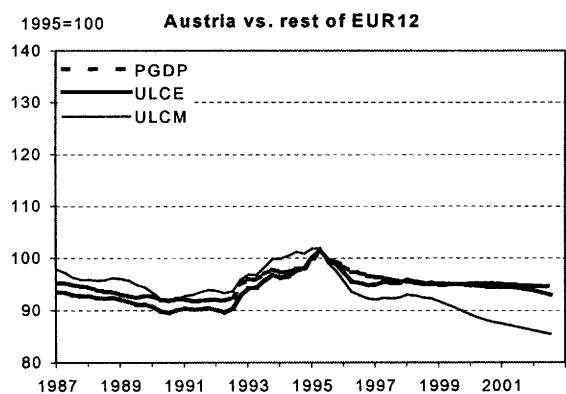

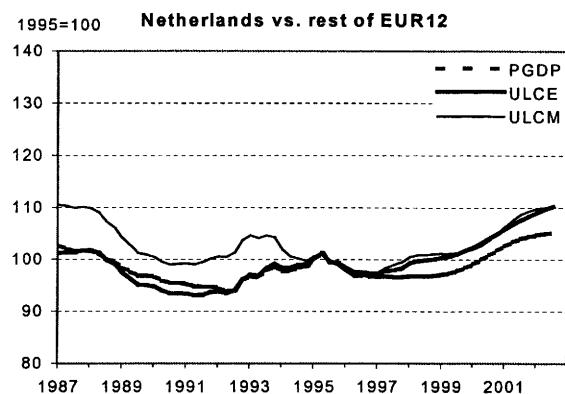

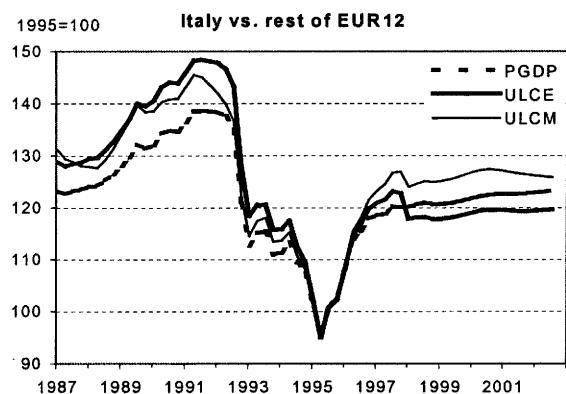

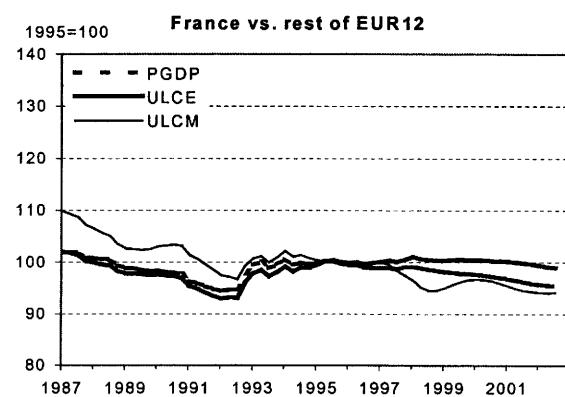

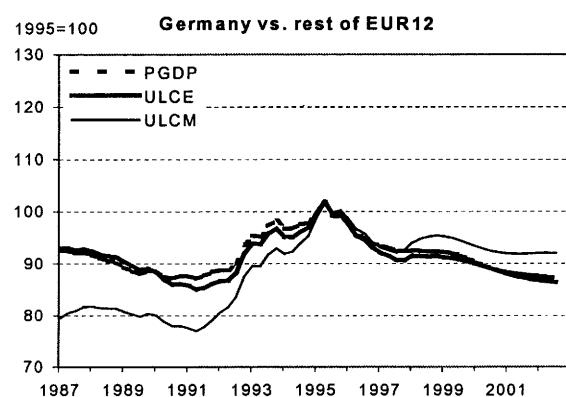

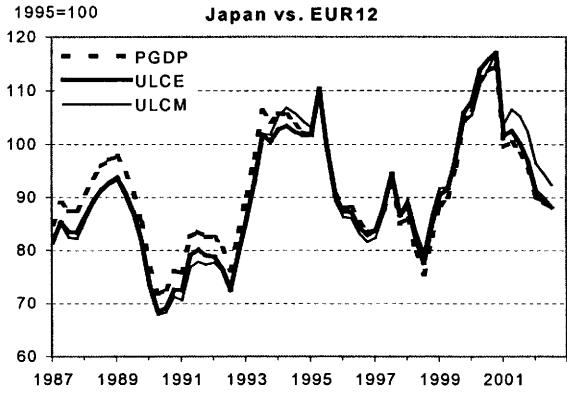

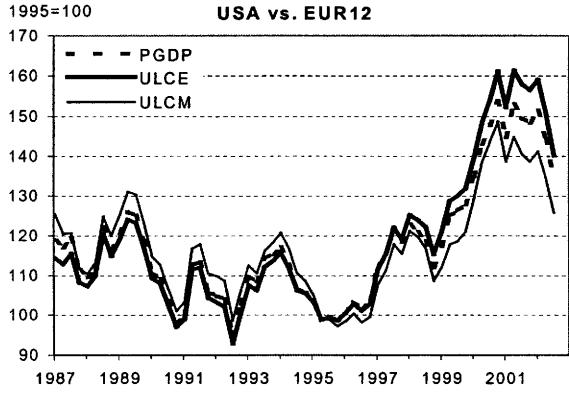

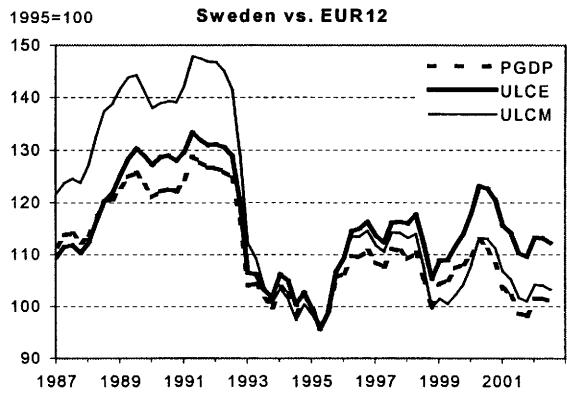

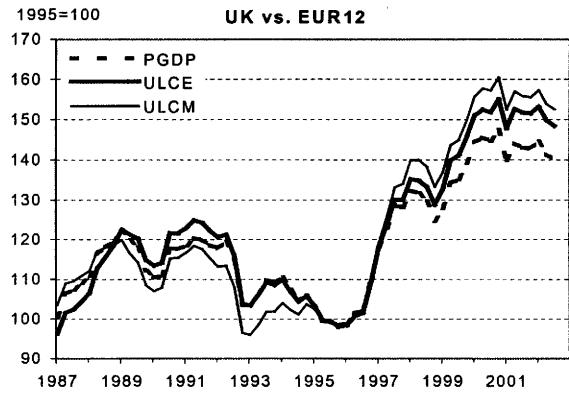

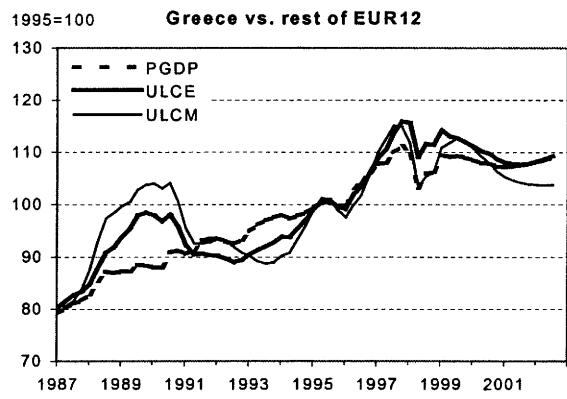

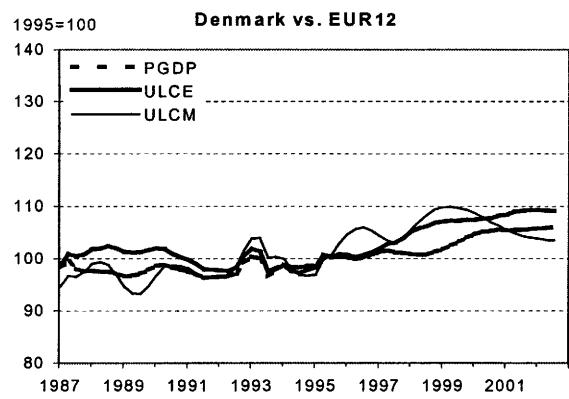

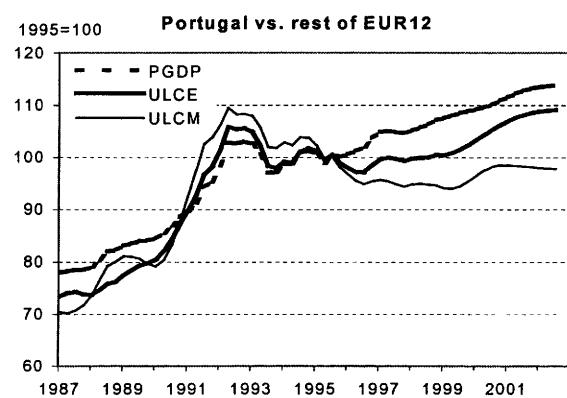

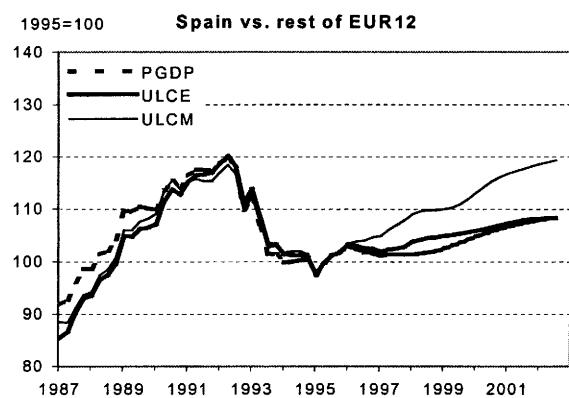

Chart 10 contd.: Price and cost indicators for individual countries relative to EUR12

PART 2

TABLES AND GRAPHS BY COUNTRY

PART 2:

TABLES AND GRAPHS BY COUNTRY

The tables and graphs on **Pages 1 to 40** present nominal and real effective exchange rates of the currencies of the European Union Member States and five other industrial countries. Aggregate measures for the European Union as a whole (EU) and the group of countries participating in the Economic and Monetary Union (EUR12) are presented as well. Each country (or country group) is compared with 24 industrial countries (the 15 EU countries, Norway, Australia, Canada, Japan, the United States, Mexico, New Zealand, Turkey and Switzerland), with the European Union and with the euro area.

The tables on **Pages 41 to 51** present bilateral exchange rates of the US dollar against the currencies of the 24 industrial countries; and nominal and real effective exchange rates of the EU currencies, the US dollar and Japanese yen (as well as aggregate measures for EU and EUR12). Each cross-national table of real effective exchange rates is based on a single price or cost deflator. Price and cost indices in national currency are presented as well. These tables aim to facilitate a comparison of developments in the different industrial countries. The final table shows the latest double export weight matrices that were used to calculate effective exchange rates.¹

Abbreviations: IC = 24 Industrial Countries
EU = 15 Member States of the European Union
EUR12 = Countries in the euro area
PCP = Deflator of private consumption
PGDP = Gross Domestic Product Deflator
PX = Price Deflator Exports of Goods and Services
ULCE = Nominal Unit Labour Cost in total Economy
ULCM = Nominal Unit Labour Cost in Manufacturing industry

Germany – euro (before 1999: DEM)

Abbreviations: IC = 24 Industrial Countries
EU = 15 Member States of the European Union
EUR12 = Countries in the euro area
PCP = Deflator of private consumption
PGDP = Gross Domestic Product Deflator
PX = Price Deflator Exports of Goods and Services
ULCE = Nominal Unit Labour Cost in total Economy
ULCM = Nominal Unit Labour Cost in Manufacturing industry

Italy – euro (before 1999: ITL)

Abbreviations: IC = 24 Industrial Countries
EU = 15 Member States of the European Union
EUR12 = Countries in the euro area
PCP = Deflator of private consumption
PGDP = Gross Domestic Product Deflator
PX = Price Deflator Exports of Goods and Services
ULCE = Nominal Unit Labour Cost in total Economy
ULCM = Nominal Unit Labour Cost in Manufacturing industry

Table A1: Bilateral exchange rate of the US dollar against the EU currencies
 (Price of one US dollar in terms of the currencies of each of the countries/currency areas indicated)

TECHNICAL ANNEX

INTRODUCTION

The quarterly report on price and cost competitiveness presents recent changes in the nominal and real effective exchange rates of the euro area (EUR12), of the 15 individual EU Member States, as well as of the United States, Japan, Norway, Australia, and Canada (part 2). Aggregate measures for the European Union (EU) are presented as well.

The nominal effective exchange rate (NEER) (or, equivalently, the "Trade-weighted currency index") describes changes in the average value of a currency with reference to a given base period and a given group of reference countries. It is calculated as a weighted geometric average of the bilateral exchange rates against the currencies of competing countries. In this report, three alternative groups of competitor countries are considered: a group of 24 industrial countries (IC), the 15 Member states of the European Union (EU) and the countries in the euro area (EUR12).

The real effective exchange rate (REER) (or, equivalently, the "Relative price and cost indicators") is calculated as the sum of the nominal rate and a trade-weighted price or cost deflator. The REER attempts to show the movement in the prices or costs of production of domestically produced goods relative to the prices or costs of goods produced by competitor countries, when expressed in a common currency.

Double export weights are used to calculate NEERs and REERs, reflecting not only competition in the home markets of the various competitors, but also competition in export markets elsewhere.

DG ECFIN's system for the calculation of effective exchange rates permits the user to make individual choices of competitor countries, reference period, method to calculate trade weights and, in the case of real effective exchange rates, price or cost deflators. This technical annex describes the standard measures used in this series of Quarterly Reports. Differently defined nominal and real exchange rates can be provided to interested persons or organisations upon request. Please fax your request to the European Commission, Directorate-General for Economic and Financial Affairs (DG ECFIN-C-1), fax n° +32-2-299.35.05.

METHOD

1. Choice of reference period

The choice of the reference period in assessing developments in nominal and real effective exchange rates is necessarily arbitrary and should not be seen as implying that exchange rates prevailing in this reference period were in equilibrium. For technical reasons, the reference year has been changed from 1994 to 1995.

2. Calculation and application of trade weights (that transform the bilateral exchange rates into effective exchange rates)

The trade weights used are double export weights. This implies that the bilateral exchange rates between the currency of a given country and the currencies of its competitor countries are weighted according to both:

- (1) the competitors' share in the total supply of competing goods (including the supply by domestic producers) in each market separately; and

- (2) the relative share of each market in the total exports of the given country.

Moving weight matrices are used in order to capture the influence of changing trade patterns over time. The weight matrix of year t-1 are used to calculate the change in the effective exchange rate between the year t and t-1. If no weights are available for the year t-1, the weights of the latest year available are used.

3. Price and cost deflators (to transform the nominal effective exchange rates into real effective rates)

Five real effective exchange rates (each based on a different deflator) have been calculated in order to provide a comprehensive assessment of a country's price and cost competitiveness. The following deflators have been used:

- (1) the deflator of private consumption (PCP);
- (2) the GDP deflator (PGDP);
- (3) the price deflator of exports of goods and services (PX);
- (4) Unit Labour Costs in Economy as a whole (ULCE); and
- (5) Unit Labour Costs in Manufacturing (ULCM).

4. German unification

The data used in the quarterly reports on price and cost competitiveness have been adjusted¹ to reflect the shift in the average level of unit labour costs, thereby better capturing the deterioration in average German cost competitiveness associated with unification. An estimate had to be made for the level shift in unit labour costs in the manufacturing sector. On the basis of data for value-added and employment in the manufacturing sector in subsequent years the productivity gap was found to be smaller in this sector. Average unit labour costs in manufacturing have been adjusted by 1.3 per cent from 1991 onwards.

5. Italy

In January 1998 a tax reform was introduced, bringing in a new tax on firms (IRAP) specifically on value added. This tax reform abolished also some social contributions which caused the reduction to the non-wage labour costs as well as the total labour costs in 1998. In January 1999 another law was introduced which caused further reductions in social security contributions.

6. Adjustment in the computation of the euro effective exchange rate indices following the adoption of the euro by Greece

Up until 31 December 2000 the effective exchange rates (EER) indices of the euro were calculated against IC including Greece as a trading partner. As from 1 January 2001, following the adoption of the euro by Greece, the euro EER series have been modified to reflect the enlargement of the euro area. The new series now treat Greece as a euro area country prior to January 2001. The new weights were applied for the whole of the period over which the euro indices are calculated². In this

¹ For more details, see the box on German unification and cost competitiveness box published in the first quarter 2000 report

² Similarly, euro area-wide deflators used for this purpose include Greek cost or price developments, again prior to Greece's adoption of the single currency.

context, a “theoretical” euro exchange rate has been computed in which the Greek drachma is treated as an EMU legacy currency.

7. Adjustment in the computation of the annual data in part 2 of the databank on price and cost competitiveness

Up to this issue annual data displayed in part 2 of the price and cost competitiveness were calculated from quarterly data (geometric averages). However, as some of the quarterly data (e.g. unit labour costs) are calculated from annual data by applying a cubic-spline method, the re-constructed annual data slightly diverged from the “true” annual data. For consistency, this problem has been resolved and from now onwards, our databank provides now “true” annual data.

DATA SOURCES

1. Nominal bilateral exchange rates and deflators

Exchange rate data for the current year are the official daily rates recorded at 14.15 hours by the ECB. Monthly data are calculated as the arithmetic mean of the daily rates. Quarterly and yearly data are geometric means of these monthly figures. Historical data are provided by the IFS (IMF) database. For the period before 1999, a weighted average of the currencies of the Member States now participating in the euro area is used as a proxy for the euro.

Annual data for the deflators (including Commission forecasts for the current year) come from DG ECFIN’s AMECO database. As the calculation of real effective exchange rates requires a full data set, missing data have been estimated. The annual data have been transformed into quarterly data by applying a straight-forward spline method.

2. Weight matrices

The moving double export weight matrices are derived from trade matrices with domestic production for the home market on the diagonal. The source of data on bilateral exports is the DoT (IMF) database. The source of data on domestic production (defined as GDP - exports) is national accounts' data from AMECO. Table H in Part 2 of the report reproduces the most recent weight matrices used in calculating effective exchange rates.

COUNTRY COVERAGE

1. Competitors

The report presents nominal and real effective exchange rates relative to a group of 24 industrial countries (IC), relative to the European Union as a whole (EU) and relative to the countries in the euro area (EUR12). IC consists of the 15 EU Member States plus United States, Canada, Japan, Switzerland, Norway, Australia, New Zealand, Mexico, and Turkey.

2. Markets

Besides the countries considered as competitors, the following markets are distinguished: other Europe (including the Central and Eastern European Countries and the countries that used to be part of the USSR), other Asia/Oceania, other Western hemisphere, Africa, the Middle East and the rest of the World (including North Korea and Cuba). The conventions used in DoT/IFS (IMF) are followed strictly with two exceptions: (1) the industrial countries are not treated as a separate category; (2) the former East and West Germany are considered as a single entity: Germany.
