Foreword

GENERAL GOVERNMENT DATA show the public finance time series contained in the DG II macroeconomic database. This printed edition is produced twice a year following the completion of the DG II economic forecasts. Each issue contains detailed quantitative information on the government receipts and expenditure account, government gross debt and on the contribution of the flow variables to the change in the gross debt ratio.

For the period up to 1995, the figures in the DG II database originate from the national accounts established by the Member States' statistical offices and by Eurostat. When more recent information is made available to the Commission, DG II updates the database by including the newly available figures after a thorough assessment of the quality and comparability of the new figures. Data for the years 1996 and 1997 are DG II economic forecasts (Autumn 1996). These forecasts also follow the national accounts framework and utmost care is taken to ensure consistency with the corresponding time series.

NOTES

THE GENERAL GOVERNMENT RECEIPTS AND EXPENDITURE ACCOUNT - CONSOLIDATED

(Part I : Country tables)

RECEIPTS

1. **INDIRECT TAXES:** taxes linked to production and imports, compulsory payments levied by general government or by the institutions of the European Communities (including agriculture and ECSC levies) and taxes on producer units with respect to the production and imports of goods and services or the use of production factors.
2. **DIRECT TAXES:** current taxes on income and wealth, compulsory payments levied by general government and by the rest of the world on income and wealth.
3. **SOCIAL SECURITY CONTRIBUTIONS:** actual social contribution , including payments made by insured persons or their employers, either directly or through a collection agency and imputed social contributions representing the counterpart of social benefits paid directly by employers to their employees or former employees (not linked to employee actual contribution).
4. **OTHER CURRENT RECEIPTS:** net property and entrepreneurial income: this item covers actual interest received, income from land, dividends paid by corporate enterprises to general government, accident insurance claims, amounts paid by insurance enterprises in settlement of injuries or damages; gross operating surplus, miscellaneous current transfers and consumption of fixed capital. Current transfers from the rest of the world are excluded.
5. **TOTAL CURRENT RECEIPTS:** total of lines 1,2,3 and 4.
Total does not include current transfers from the rest of the world.

EXPENDITURE

6. **TOTAL CURRENT TRANSFERS:** total of lines 6.7 and 8.
- 6a. *Current transfers to enterprises* : production and import subsidies that general government or the institutions of the EC make as a matter of economic and social policy to resident units producing or importing goods and market services.
- 6b. *Current transfer to households (including private non profit institutions)* : social benefits including all current transfers to households via the intervention of a third party (general government, social security) to relieve households of the financial burden created by the appearance of certain risks or needs; current transfers to private non-profit institutions including all voluntary contributions and membership subscriptions.
- 6c. *Net current transfers to the rest of the world* : all transfers (except grants or other capital transfers) paid by general government to the rest of the world (including EC institutions) MINUS all transfers received by the general government from the rest of the world (including EC institutions).
- 6d. *Other current transfers* : all current transfers other than those mentioned above, such as net accident insurance premium.

7. ACTUAL INTEREST PAYMENTS: remuneration on certain financial assets (deposits, bills, bonds, credits) held by other sectors.
8. GOVERNMENT CONSUMPTION : Total of compensation of employees (line 8a), purchases of goods and services (lines 8b) and consumption of fixed capital.
 - 8a. *Compensation of employees* : all payments in cash and in kind made by employers. These payments cover gross wages and salaries, employers' actual social contributions and imputed social contributions.
 - 8b. *Current purchase of goods and services* : in net terms (minus sales of goods and services) and excluding consumption of fixed capital.
9. TOTAL CURRENT EXPENDITURE: total of lines 6,7 and 8. This line includes current transfers to the rest of the world in net terms (see line 6c).
10. GROSS SAVING : balance of current resources and expenditure.
11. NET CAPITAL TRANSFERS PAID: investment grants, unrequited transfers by general government or by the rest of the world to finance in whole or in part specific items of gross fixed capital formation minus capital taxes, compulsory payments at irregular intervals on capital or wealth; other non specified capital transfers.
12. FINAL CAPITAL EXPENDITURE: including
 - gross fixed capital formation representing the value of durable goods intended for non-military purposes which are acquired to be used for a period of more than a year;
 - net purchases of land and intangible assets;
 - changes in stock, covering goods put in strategic or emergency stocks or held by market regulatory agencies, in so far as these are classified in the general government sector.
13. TOTAL EXPENDITURE: total of current expenditure, net capital transfers and final capital expenditure.

BALANCE

14. NET LENDING (+) OR NET BORROWING (-) shows the net amount of resources which the sector places at the disposal of other sectors or which other sectors provide to the sector; it corresponds to the difference between lines 5 and the total of lines 9, 11 and 12.

THE GENERAL GOVERNMENT GROSS DEBT

15. General government consolidated gross debt is defined by article 1 (5) of Council Regulation (EC) N 3605/93 of 22 November 1993:

" Government debt means the total gross debt at nominal value outstanding at the end of the year of the sector of general government (S60), with the exception of those liabilities the corresponding financial assets of which are held by the sector of general government (S60). Government debt is constituted by the liabilities of general government in the following categories: currency and deposits (F20 and F30), bills and short-term bonds (F40), long-term bonds (F50), other short-term loans (F79) and other medium and long-term loans (F89) as defined in ESA. The nominal value of a liability outstanding at the end of the year is the face value. The nominal value of an index-linked liability corresponds to its face value adjusted by the index-related capital uplift accrued to the end of the year. Liabilities denominated in foreign currencies shall be converted into the national currency at the representative exchange rate prevailing on the last day of each year "

THE BUDGETARY CONSTRAINT

16 The tables D present for each Member State a quantitative expression of the budgetary constraint, giving the influence of the flow variables on the change of the general government gross debt to GDP ratio.

The budgetary constraint for a country can be expressed by the following equation:

$D_t = D_{t-1} + NB_t + SF_t$, or $\frac{D_t}{Y_t} = \frac{D_{t-1}}{Y_{t-1}} \cdot \frac{1}{1+y_t} + \frac{NB_t}{Y_t} + \frac{SF_t}{Y_t}$, where D_t = general government gross debt; NB_t = general government deficit (net borrowing); Y_t = GDP at current market prices, y_t = nominal GDP growth rate and SF_t = stock-flow adjustment. The t subscript denotes the year.

The equation can be presented as $\frac{D_t}{Y_t} - \frac{D_{t-1}}{Y_{t-1}} = \frac{NB_t}{Y_t} - \frac{D_{t-1}}{Y_{t-1}} \cdot \frac{y_t}{1+y_t} + \frac{SF_t}{Y_t}$ (1)

showing the decomposition of the change in the gross debt ratio in deficit, contribution of nominal GDP growth and stock-flow adjustment. The equation may also be presented emphasizing the role of the primary deficit:

$D_t = D_{t-1} \cdot (1+i_t) + PD_t + SF_t \Leftrightarrow \frac{D_t}{Y_t} = \frac{D_{t-1}}{Y_{t-1}} \cdot \frac{1+i_t}{1+y_t} + \frac{PD_t}{Y_t} + \frac{SF_t}{Y_t}$, where we define PD_t = primary deficit and i_t = effective interest rate.

It may be rearranged as $\frac{D_t}{Y_t} - \frac{D_{t-1}}{Y_{t-1}} = \frac{PD_t}{Y_t} + \frac{D_{t-1}}{Y_{t-1}} \cdot \frac{i_t - y_t}{1+y_t} + \frac{SF_t}{Y_t}$ (2)

showing the change in the gross debt ratio as primary deficit, snow-ball effect and stock-flow adjustment.

The contributions to changes in the gross debt ratio in the Member States and the Community are presented in Tables D in accordance with (1) and (2) in lines 5, 6 and 7, and 8, 9 and 10, respectively.

STOCK FLOW ADJUSTMENT

17. The stock-flow adjustment ensures the consistency between net borrowing (flow) and the variation in the stock of gross debt. It includes the accumulation of financial assets, the changes in the value of debt denominated in foreign currency and remaining statistical adjustments. The stock flow adjustment figures shown in tables D for the Community aggregates comprise, besides the weighted average of the stock-flow adjustments of the Member States considered, the influence of exchange rate movements on the preceding year's national stock of gross debt expressed in ECU. These exchange rates effects on Community aggregates, which may at times be sizable, appear in the Community stock-flow because of its calculation as a residual.

GROSS DOMESTIC PRODUCT

18. Whenever government data (e.g. government debt) are expressed in terms of gross domestic product, they have been calculated with reference to the most recent GDP data available. This GDP is presented in table 51A entitled "gross domestic product at current market prices (unlinked series)". These series may contain breaks because revisions have not always been carried through for all the preceding years. However as GDP growth rates are seriously influenced by breaks, nominal GDP growth rates presented in line 4 of tables D, are based on a linked GDP time series. Contributions of nominal GDP growth to the change in the debt ratio (line 6) as well as the snow-ball effect (line 9) are also calculated with a linked GDP time series. Therefore, whenever a break in the GDP time series occurs, the change in gross debt (line 11) does not strictly correspond to the total of lines 5 to 7 or 8 to 10.
