Foreword

GENERAL GOVERNMENT DATA shows the time-series for the general government transactions which DG II uses for its monitoring of budgetary situations. In order to ensure comparability, the data presented follow economic accounts definitions. Specifically, the reference is the European System of Integrated Economic Accounts, second edition (ESA79). Deficit and debt figures comply with the definitional requirements laid down in the Maastricht Treaty and in secondary legislation. They also take into account Eurostat decisions which clarify the application of certain ESA79 accounting rules.

Deficit and debt figures up to 1998 have been compiled and reported to the Commission by the Member States. In some cases there may be small differences between the historical deficit figures and the balance between receipts and expenditures. If so, this is because updated receipt/expenditure figures are not yet available. Figures for 1999 and 2000 are DG II forecasts of spring 1999.

In year 2000, the reference accounting system used for the monitoring of budgetary situations will change from the ESA79 to the new ESA95 system. Therefore, Member States are now in a transition period going into the ESA95 framework. Some Member States (namely DK and UK) have already implemented ESA95 in their national accounts. For these countries, receipt and expenditure figures are now expressed on an ESA95 basis for the latest years. However, as net borrowing figures are on the reference ESA79 basis, a difference may arise with the balance of ESA95 transactions. Years for which transactions are on an ESA95 basis are clearly signalled by footnotes in the tables.

GENERAL GOVERNMENT DATA is organised in two parts. Part I shows for each Member State the figures of the government receipts and expenditure account. The government debt ratios and the underlying factors contributing to the debt dynamics are also presented. In Part II, each Table covers one specific transaction and shows the time-series since 1970 for all Member States, for the Community as a whole and for the group of 11 Member States participating from the start in EMU. Other Community aggregations are also shown because of missing data for some Member States.

GENERAL GOVERNMENT DATA is produced twice a year in connection with the publication of the DG II economic forecasts. It is now also available in an electronic form.

PART I: TABLES BY COUNTRY (1988-2000)

1. Belgium	9. Italy	20. EUR10 *
2. Denmark	10. Luxembourg	21. EUR11 *
3. West Germany	11. Netherlands	22. EUR14 *
4. Germany	12. Austria	23. EUR15 *
5. Greece	13. Portugal	
6. Spain	14. Finland	
7. France	15. Sweden	
8. Ireland	16. United Kingdom	

- A: *General government accounts in national currency.*
B: *General government accounts as percent of GDP at market prices.*
C: *General government accounts; annual percentage change.*
D: *Contributions to the change in the general government gross debt ratio.*

PART II: TABLES BY SERIES (1970-2000)

30. Indirect taxes	38. Net current transfers to the rest of the world	45. Net capital transfers paid
31. Direct taxes	39. Actual interest payments	46. Final capital expenditure
32. Social security contributions	40. Government consumption	47. Total expenditure
33. Other current receipts	41. Compensation of employees	48. Net lending (+) or net borrowing (-)
34. Total current receipts	42. Purchases of goods and services	49. Net lending (+) or net borrowing (-) excl. interest payments
35. Total current transfers	43. Total current expenditure	50. General government gross debt
36. Current transfers to enterprises	44. Gross saving	51. Gross domestic product at current market prices
37. Current transfers to households		

- A: *National currency.*
B: *As percent of GDP at market prices.*
C: *Annual percentage change.*

* Table 21 (EUR11) corresponds to the group of Member States (B, D, E, F, IRL, I, L, NL, A, P and FIN) participating in EMU from 1 January 1999. Table 23 (EUR15) covers the European Union as a whole. Luxembourg is not taken into account in Tables 20 (EUR10) and 22 (EUR14) because of missing data.

Methodological notes

General government

The general government sector covers central government, local government and social security funds. The sector is not defined on an institutional basis but on a functional basis. It includes all institutional units that are principally engaged in the production of non-market services intended for collective consumption and/or in the redistribution of national income or wealth. The main resources of these units are derived directly or indirectly from compulsory payments made by units belonging to other sectors.

Publicly owned units dealing with commercial operations, such as public enterprises are excluded.

The institutions of the European Communities are, according to the ESA-79 accounting rules, classified within the sector Rest of the world. However, in order to present data in a more suitable way for economic analysis, taxes levied on resident units by the institutions of the European Communities (e.g., VAT paid to the EC budget, agricultural levies, etc.) are recorded as levied by national governments. These receipts are then recorded as current transfers to the rest of the world. Similarly, transfers paid by the EC institutions to resident units are recorded in this document as transfers received by the government from the rest of the world and then as transfers from government to final recipients. The inclusion of these EC-related flows in the general government accounts is, therefore, neutral for the government balances.

General government net borrowing

According to the Protocol on the excessive deficit procedure and to Council Regulation (EC) n°3605/93 (article 1(3)), the government deficit subject to monitoring by the Commission is general government net borrowing.

Net borrowing refers to the excess of all current and capital expenditure over the corresponding resources and excludes all financial transactions (financial transactions are the sales and purchases of financial assets, such as gold, currency, deposits, loans, equity and bonds). Capital transactions, which cover capital expenditure (investment) and capital transfers (such as investment grants and capital taxes), influence net borrowing. They must not be confused with financial transactions.

Net borrowing must not be confused with the borrowing requirement often used as reference in budget laws, as the borrowing requirement normally includes some financial transactions and usually only covers the central government.

Receipts and expenditure account

Government transactions and respective main balances are classified in this document according to the following categories:

INDIRECT TAXES (see line 1 in Tables A, B and C in Part I and Tables 30 in Part II): taxes linked to production and imports, compulsory payments levied by general government or by the institutions of the European Communities (including agriculture and ECSC levies) and taxes on producer units with respect to the production and import of goods and services or the use of production factors.

DIRECT TAXES (see line 2 in Tables A, B and C in Part I and Tables 31 in Part II): current taxes on income and wealth, compulsory payments levied by general government and by the rest of the world on income and wealth.

SOCIAL SECURITY CONTRIBUTIONS (see line 3 in Tables A, B and C in Part I and Tables 32 in Part II): actual social contributions, including payments made by insured persons or their employers, either directly or through a collection agency and imputed social contributions representing the counterpart of social benefits paid

directly by employers to their employees or former employees (not linked to employee actual contributions).

OTHER CURRENT RECEIPTS (see line 4 in Tables A, B and C in Part I and Tables 33 in Part II): net property and entrepreneurial income. This item covers actual interest received, income from land, dividends paid by corporate enterprises to general government, accident insurance claims, amounts paid by insurance enterprises in settlement of injuries or damages; gross operating surplus, miscellaneous current transfers and consumption of fixed capital. Current transfers from the rest of the world are excluded.

TOTAL CURRENT RECEIPTS (see line 5 in Tables A, B and C in Part I and Tables 34 in Part II): total of indirect and direct taxes, social security contributions and other current receipts. Total current receipts does not include current transfers from the rest of the world.

CURRENT TRANSFERS (see line 6 in Tables A, B and C in Part I and Tables 35 in Part II): Total of current transfers to enterprises, current transfers to households (including private non-profit institutions), net current transfers to the rest of the world and other current transfers (such as net accident insurance premia).

CURRENT TRANSFERS TO ENTERPRISES (see line 6a in Tables A, B and C in Part I and Tables 36 in Part II): production and import subsidies that general government or the EC institutions make as a matter of economic and social policy to resident units producing or importing goods and market services.

CURRENT TRANSFERS TO HOUSEHOLDS (see line 6b in Tables A, B and C in Part I and Tables 37 in Part II): social benefits including all current transfers to households (including private non-profit institutions) via the intervention of a third party (general government, social security) to relieve households of the financial burden created by the appearance of certain risks or needs; current transfers to private non-profit institutions including all voluntary contributions and membership subscriptions.

NET CURRENT TRANSFERS TO THE REST OF THE WORLD (see line 6c in Tables A, B and C in Part I and Tables 38 in Part II): all transfers (except investment grants or other capital transfers) paid by general

government to the rest of the world (including to the EC institutions) MINUS all transfers received by the general government from the rest of the world (including from the EC institutions).

ACTUAL INTEREST PAYMENTS (see line 7 in Tables A, B and C in Part I and Tables 39 in Part II): remuneration on certain financial assets (deposits, bills, bonds, loans) held by other sectors.

GOVERNMENT CONSUMPTION (see line 8 in Tables A, B and C in Part I and Tables 40 in Part II): Total of compensation of employees, purchases of goods and services and consumption of fixed capital.

COMPENSATION OF EMPLOYEES (see line 8a in Tables A, B and C in Part I and Tables 41 in Part II): all payments in cash and in kind made by employers. These payments cover gross wages and salaries, employers' actual social contributions and imputed social contributions.

CURRENT PURCHASE OF GOODS AND SERVICES (see line 8b in Tables A, B and C in Part I and Tables 42 in Part II): in net terms (MINUS sales of goods and services) and excluding consumption of fixed capital.

TOTAL CURRENT EXPENDITURE (see line 9 in Tables A, B and C in Part I and Tables 43 in Part II): total of current transfers, actual interest payments and government consumption.

GROSS SAVING (see line 10 in Tables A, B and C in Part I and Tables 44 in Part II): balance of current resources MINUS current expenditure.

NET CAPITAL TRANSFERS PAID (see line 11 in Tables A, B and C in Part I and Tables 45 in Part II): investment grants, unrequited transfers by general government or by the rest of the world to finance in whole or in part specific items of gross fixed capital formation MINUS capital taxes, compulsory payments at irregular intervals on capital or wealth; other non specified capital transfers.

FINAL CAPITAL EXPENDITURE (see line 12 in Tables A, B and C in Part I and Tables 46 in Part II): including – gross fixed capital formation (representing the value of durable goods intended for non-military purposes which are acquired to be used for a period of more than a

year); – net purchases of land and intangible assets; and – changes in stocks (covering goods put in strategic or emergency stocks or held by market regulatory agencies, in so far as these are classified in the general government sector).

TOTAL EXPENDITURE (see line 13 in Tables A, B and C in Part I and Tables 47 in Part II): total of current expenditure, net capital transfers and final capital expenditure.

NET LENDING (+) OR NET BORROWING (-) (see line 14 in Tables A, B and C in Part I and Tables 48 in Part II): shows the net amount of resources which the sector places at the disposal of other sectors or which other sectors provide to the sector; it corresponds to the difference between total receipts and total expenditure. For the primary balance, i.e., net lending/net borrowing excluding interest payments, see Tables 49 in Part II.

General government consolidated gross debt

The accounting system presently in use (ESA-79) only records economic flows. Since no stocks are recorded, there are no balance-sheets and thus, no measurement of government debt. Hence, a precise definition of government debt had to be agreed upon when the Maastricht Treaty was adopted. This is laid down in the Protocol on the excessive deficit procedure and specified in secondary legislation. The concept retained is general government gross debt at nominal value, consolidated for government liabilities held within the sub-sectors of general government. More specifically, Article 1(5) of Council Regulation (EC) n°3605/93 of 22 November 1993 defines government debt as follows:

“Government debt means the total gross debt at nominal value outstanding at the end of the year of the sector of general government (S60), with the exception of those liabilities the corresponding financial assets of which are held by the sector of general government (S60).

Government debt is constituted by the liabilities of general government in the following categories: currency and deposits (F20 and F30), bills and short-term bonds (F40), long-term bonds (F50), other short-term loans (F79) and other medium and long-term loans (F89) as defined in ESA.

The nominal value of a liability outstanding at the end of the year is the face value.

The nominal value of an index-linked liability corresponds to its face value adjusted by the index-related capital uplift accrued to the end of the year.

Liabilities denominated in foreign currencies shall be converted into the national currency at the representative exchange rate prevailing on the last day of each year”.

Government gross debt data are shown in Tables 50 of Part II. The contributions to the changes in the gross debt ratios are presented in Table D of Part I (see Budgetary constraint, below).

Gross domestic product

Gross domestic product used for the calculation of ratios is GDP at market prices as defined in GNP directive 89/130/EEC, Euratom of 13 February 1989 (“GDP-fourth resource”). Article 2 of Council Regulation (EC) n° 3605/93 of 22 November 1993 requires the use of this GDP for the calculation of the budgetary convergence criteria. “GDP-fourth resource” may slightly differ from the GDP series published in the national accounts.

“GDP-fourth resource” data are available for all Member States only from 1988 onwards.

Budgetary constraint

Tables D in Part I present for each Member State, a quantitative expression of the budgetary constraint, giving the influence of the flow variables on the dynamics of the government debt.

The budgetary constraint for a country can be expressed by the following equation:

$$D_t = D_{t-1} + NB_t + SF_t, \quad \text{or} \quad \frac{D_t}{Y_t} = \frac{D_{t-1}}{Y_{t-1}} \cdot \frac{1}{1+y_t} + \frac{NB_t}{Y_t} + \frac{SF_t}{Y_t}, \quad \text{where}$$

D_t = general government gross debt; NB_t = general government deficit (net borrowing (+)); Y_t = GDP at current market prices, y_t = nominal GDP growth rate and SF_t = stock-flow adjustment. The t subscript denotes the year.

The equation can be presented as:

$$\frac{D_t}{Y_t} - \frac{D_{t-1}}{Y_{t-1}} = \frac{NB_t}{Y_t} - \frac{D_{t-1}}{Y_{t-1}} \cdot \frac{y_t}{1+y_t} + \frac{SF_t}{Y_t} \quad (1),$$

showing the decomposition of the change in the gross debt ratio in deficit, contribution of nominal GDP growth and stock-flow adjustment.

The equation may also be presented emphasising the role of the primary deficit:

$$D_t = D_{t-1} \cdot (1 + i_t) + PD_t + SF_t \Leftrightarrow \frac{D_t}{Y_t} = \frac{D_{t-1}}{Y_{t-1}} \cdot \frac{1 + i_t}{1 + y_t} + \frac{PD_t}{Y_t} + \frac{SF_t}{Y_t}, \quad \text{where}$$

we define PD_t = primary deficit and i_t = implicit interest rate.

It may be rearranged as:

$$\frac{D_t}{Y_t} - \frac{D_{t-1}}{Y_{t-1}} = \frac{PD_t}{Y_t} + \frac{D_{t-1}}{Y_{t-1}} \cdot \frac{i_t - y_t}{1 + y_t} + \frac{SF_t}{Y_t} \quad (2),$$

showing the change in the gross debt ratio as primary deficit, snowball effect (contribution of interest and nominal growth) and stock-flow adjustment.

The contributions to changes in the gross debt ratio in the Member States and the Community are presented in Tables D in accordance with (1) and (2) in lines 5, 6 and 7, and 8, 9 and 10, respectively.

Stock-flow adjustment

The stock-flow adjustment ensures the consistency between net borrowing (flow) and the variation in the stock of gross debt. It includes the accumulation of financial assets, the changes in the value of debt denominated in foreign currency and remaining statistical adjustments. The stock-flow adjustment figures shown in Tables D for the Community aggregates comprise, besides the weighted average of the stock-flow adjustments of the Member States considered, the influence of exchange rate movements on the preceding year's stocks of gross debt expressed in ECU.

Sources

Deficit and debt figures up to 1998 have been compiled by national statistical offices, reported by the Member States to the Commission and checked by Eurostat. GDP data used for the calculation of ratios have also been reported to the Commission and verified by Eurostat.

In some cases there may be small differences between the historical deficit figures and the balance between receipts and expenditures. If so, this is because updated receipt/expenditure figures are not yet available. Figures for 1999 and 2000 are DG II forecasts of spring 1999.

In year 2000, the reference accounting system used for the monitoring of budgetary situations will change from the ESA79 to the new ESA95 system. Therefore, Member States are now in a transition period going into the ESA95 framework. Some Member States (namely DK and UK) have already implemented ESA95 in their national accounts. For these countries, receipt and expenditure figures are now expressed on an ESA95 basis for the latest years. However, as net borrowing figures are on the reference ESA79 basis, a difference may arise with the balance of ESA95 transactions. Years for which transactions are on an ESA95 basis are clearly signalled by footnotes in the tables.

1) 1996 to 2000 figures are on ESA95 basis.

2) 1970-91 WD

3) Indirect taxes paid to EC institutions not included.

4) There is a break in the series between 1997 and 1998 due to a tax reform whereby a regional value added tax has replaced health contributions and other direct taxes.

5) 1989 to 2000 figures are on ESA95 basis.

DS: 1 0 310 0 UTSG

1) 1996 to 2000 figures are on ESA95 basis.

2) 1970-91 WD

3) There is a break in the series between 1997 and 1998 due to a tax reform whereby a regional value added tax has replaced health contributions and other direct taxes.

4) 1989 to 2000 figures are on ESA95 basis.
