ADD 1**

ENER 84

COVER NOTE

from: Secretary-General of the European Commission,
signed by Mr Jordi AYET PUIGARNAU, Director

date of receipt: 11 March 2009

to: Mr Javier SOLANA, Secretary-General/High Representative

Subject: DG TREN Staff Working Document
- Report on Progress in Creating the Internal Gas and Electricity Market
Technical Annex to the Communication from the Commission to the Council
and the European Parliament

Delegations will find attached Commission document SEC(2009) 287.

COMMISSION STAFF WORKINGPAPER

REPORT ON PROGRESS IN CREATING THE INTERNAL GAS AND ELECTRICITY MARKET: TECHNICAL ANNEX

BACKGROUND TO THIS REPORT

This summary technical report contains important background information relevant to the main 2008 Communication on the implementation of the electricity and gas Directives¹. The bulk of the information is based on the reports made by national regulators, which were submitted in the second half of 2007. These individual reports have been published and can be found on the website of the European Regulators' Group for Electricity and Gas (www.ergeg.org).

This report consists of comparative tables and graphs which, as in previous benchmarking exercises, draw together key indicators submitted by regulators. In addition, the Commission has this year conducted separate country reviews of Member States which are more forward looking assessments of the prospects for competition.² Since these comprise the main evaluation work of the Commission, no commentary has been provided for the tables in this document.

Most of the data used was submitted at the end of July 2008 and generally reflected the position at that date. However, some data items, referring to the information in a particular calendar year, will refer to the year 2007 as a whole. Where data is currently unavailable, this appears in tables as follows: "NA" (not available) or in the case the data is not applicable for the abbreviation: "NAP".

¹ 2003/54/EC and 2003/55/EC

Sorted by 2007 % volume of consumption

Source: Regulators data

Δ Calculation by DG TREN

Notes:

BE: In 2007, 7,6 TWh was traded on Belpex DAM (which is about 8,5% of the Belgian consumption). The bought volume amounts to 6,8 TWh, whereas the sold volume is 4,9 TWh. These figures differ because Belpex DAM is coupled with Powernext and APX.

BG: There is no power exchange - spot in Bulgaria.

DK: Total trade on Nord Pool in physical spot market in 2004: 167 TWh. Denmark contributes with 19,2 TWh corresponding to 11,5% of the total. Total trade on Nord Pool in physical spot market in 2005: 176 TWh. Denmark contributes with 25,7 TWh corresponding to 14,6% of the total. Total trade on Nord Pool in physical spot market in 2006: 250 TWh. Denmark contributes with 34,4 TWh corresponding to 13,8% of the total. Total trade on Nord Pool in physical spot market in 2007: 291 TWh. Denmark contributes with 35,4 TWh corresponding to 12,2% of the total.

FI: Not relevant due to Nordic markets.

FR: Source: Powernext Day-ahead.

DE: 2006: Day-ahead spot market for the market area of Germany/Austria; 2007: Day-ahead spot market for the market area of Germany/ Austria 117,93 TWh; market area Switzerland 4,33 TWh; source: EEX.

GR: Calculated as the sum of generated energy plus imports.

HU: There is no power exchange in Hungary.

IE: The Single Electricity Market for the island of Ireland is a gross mandatory pool, therefore all energy goes through the pool. The market started on the 1st November 2007 and the above figure represents energy for 2 months.

LU: No power exchange in Luxembourg.

PT: Only the period 2008/07/01-2008/12/31; Includes day-ahead and intraday demand.

ES: Besides, in 2006, 104 TWh were negotiated in bilateral contracts out of the PX spot market, and 59 TWh were cleared at the PX over the counter. The amount of bilateral contracts negotiated out of the PX (104 TWh) was a temporary consequence of the (already revoked) Royal Decree Law 3/2006 (see National Report 2007).

SE: The values show the total purchased volume in the Swedish Elspot Bid Area.

Source: Regulators data

Note:

1. Regulated transmission companies regulated: Charges are estimated excluding all taxes and levies. Both transmission and distribution charges are included,

2. Large users:

Denmark: TSO owned by network companies were handed over to the state as part of a broader mutual agreement and merged into a national TSO-Energinet.dk also covering gas

Germany: as of 12 June 2008

Hungary: Legally there are 6 DSO, but considering the DSO ownership structure, there are just 3 proprietary groups

Italy: Owner companies

Luxembourg: Based on the law, the TSO "Sotel reseau et Cie S.e.s.c." is considered being an "industrial system operator"

Portugal: Mainland of Portugal and Islands of Azores and Madeira

3. Low voltage commercial:

CZ: costumers on VHV level

Germany: As of 1 of April

Portugal: from September to December the value was 1,99 €/MWh

Romania: data for the second semester

4. Low voltage households: Overage

Table 6.2 Composition of electricity prices 2007

HOUSEHOLDS						
Composition of the household prices in € per 100 kWh					Share in price <u>without tax</u> (%)	
	Total price	Energy&supply	Network costs	Taxes&levies	Energy&supply	Network costs

Note:

1. Categories of users: Large users – prices for standard consumer I4 = annual consumption of 418,6 TJ; medium commercial – prices for standard consumer I1 = annual consumption of 0,4186 TJ; small commercial and households – prices for standard consumer D3 = annual consumption of 83,7 GJ.
2. Italy: number of regulated transmission companies: 3 other companies own small regional network stretches.
3. Sweden: no large users.
4. Network tariffs include metering costs excluding levies and taxes.

7. UNBUNDLING

¹³ In Italy the obligation of legal unbundling for DSOs entered into force for utilities serving more than 100,000 clients from the 1st January 2008

¹⁴ DSOs are mainly held in public ownership

Source: Regulators data

1. Total generation capacity: maximum net generating capacity. IEA definition: the national maximum generating capacity is defined as the sum of all individual plants' maximum net capacity available during a period of at least 15 hours per day. Net capacity is without auxiliary services.
2. Slovak Republic: Total generation capacity includes auxiliary services, which represent ca. 1 GW.
3. Sweden: Total generation capacity figures refer to total installed capacity.
4. Denmark: Sum of Denmark West and Denmark East.

Note:

1. Changes in stocks: (-) injection, (+) withdrawal.

Conversion factors

1 PJ (GCV) = 25,6 million m³ gas

1 m³ of natural gas = 39 mega joules (MJ – GCV) = 10,8 kWh

1 Mtoe = 1 million tones of oil equivalent = 41,86 PJ (NCV)

1000 m³ of natural gas = 0,9 ton oil equivante (toe – crude oil)

1 BCM = 1 billion cubic meters

1 cubic meter (m³) = 35,315 cubic feet (cf)

1 million m³ of LNG = 593 million m³ of gas

Net Caloric value (NCV) = 0,9 Gross calorific value (GCV)

1 megajoule = 10^6 joules (MJ)

1 gigajoule = 10^9 joules (GJ)

1 terajoule = 10^{12} joules (TJ)

1 petajoule = 10^{15} joules (PJ)
