FOREWORD

This is the annual report of the European Social Fund for 1981 presented by the Commission to the European Parliament and the Council pursuant to Article 6 of Council Regulation (EEC) No 858/72¹, which reads as follows:

"Every year the Commission shall, before 1 July, submit to the European Parliament and to the Council a report on the activities of the Fund carried out during the past financial year giving inter alia a breakdown of the appropriations committed for operations during that financial year. The report shall also cover foreseeable developments in the coming three years regarding expenditure relating to actions undertaken pursuant to Articles 4 and 5 of Decision 71/66/EEC".

The report is based on the format adopted in 1980 which was approved by the Council.

In order not to delay presentation of this report, the Commission's forecasts of Social Fund expenditure over the next few years (which have yet to be made) are not included but will be given in the preliminary draft budget for 1983 (see Annex to Volume 7 - Triennial Financial estimates 1983-1986).

Under Article 5 of Commission Decision 78/706/EEC², Member States were required to forward to the Commission not later than 31 March 1982 their reports on operations assisted by the Fund. When all the reports are available, they will be incorporated in a separate annex to this report.

¹OJ No L 337, 27.12.1977, p. 5.

²OJ No L 238, 30.8.1978, p. 21.

INTRODUCTION

During 1981, which is the subject of this report, the European Social Fund found itself acting against the background of an employment situation characterized by an even greater deterioration and by a narrowing of the differences noted hitherto between most Member States. At the end of the year, more than ten million unemployed were registered in the Community, representing 9.2% of the working population, as against 6.8 million, or 6.2% of the working population, in 1980.

This deterioration in the employment situation, which has persisted for several years, explains the continuing increase in applications for assistance from the Fund. The overall volume of applications amounted to 1 924.21 million ECU in 1981, i.e. an increase of 18.4% over the previous year. Applications submitted by Greece, which became a full member of the Community on 1 January 1981, amounted to 30.25 million ECU.

At the same time, the volume of available commitment appropriations was 1 108.38 million ECU, representing an increase of only 8.46% over 1980.

The gap between applications and budget resources thus continued to widen in 1981, the total volume of applications exceeding that of resources by 74% (in 1980, applications exceeded resources by 59%).

The Commission took decisions on the applications, which were divided into two series (April and September), after consulting the European Social Fund Committee. This was done in conformity with the Guidelines for the management of the Fund in 1981-83.

These Guidelines are cited in respect of each area of intervention in Chapter VI of this report.

As in 1980, the Commission, while taking into account the social and economic situation in the Community, took the view that it was necessary to give priority to training operations closely linked to employment and to promote programmes for training skilled workers in those regions of the Community which are in decline, so as to attract investment.

Faced with the need to avoid exceeding the appropriations and at the same time to build up a reserve to cope with unexpected fluctuations in exchange rates, the sum of 996.17 million ECU in available appropriations was committed in 1981, i.e. a utilisation rate of almost 90%.

As in 1980, nearly 80% of Fund assistance was allocated to operations carried out under the regions field of intervention (42.2% or 422.36 million ECU) and the young people field of intervention (37.3% or 373.38 million ECU). At the same time, 87.4% of the assistance granted (873.98 million ECU) was allocated to operations in regions eligible for European Regional Development Fund aid; of which 434.57 m ECU, or 43.5% of total Fund assistance, was for operations in the six absolute priority regions (Greenland, the French overseas departments, Greece, Ireland, Northern Ireland and the Mezzogiorno). In 1980, some 33% of Fund assistance (334 million ECU) was granted to these areas. It may be noted that absolute priority regions qualify for a rate of intervention 10% higher than that applicable to other regions in the Community.

I. THE EMPLOYMENT SITUATION IN THE COMMUNITY IN 1981

1. Employment

Employment fell more sharply in the Community in 1981 than in previous years, while the existing gaps between most Member States in this field tended to narrow.

There was no improvement in the Community's depressed economic situation in 1981, with GDP declining in real terms by about 0.5% and output falling in most countries. At the same time, net job losses amounted to about one million. Over the same period the number of vacancies fell by more than 30% to an all-time low.

In the farming sector the slow decline, already evident prior to and during 1980, continued, with agricultural jobs accounting for only 7.3% of total employment in the Community as against 7.5% in 1980, 7.6% in 1979 and 8.6% in 1975.

Job losses in industry accelerated, some 1.4 million jobs being lost during the year. The decline was even sharper than in 1980, and jobs in this sector now account for only 37.5% of total employment as against 38.5% in 1980.

The services sector, too, was badly hit and the creation of new jobs slowed down to such an extent that the increase (645.000) was the lowest since 1976.

2. Unemployment

There were more than 10 million people registered as out of work in the Community at the end of 1981, i.e. 9% of the working population. This represents a further deterioration over 1979 and 1980 when the corresponding figures were 5.7% and 7% respectively.

The number of people without jobs rose by 28% in 1981 as against a 27% rise in 1980.

Leaving aside Greece, differences in the employment situation between Member States narrowed in 1981 compared with 1980, when the number of jobless rose most steeply in the United Kingdom (+66%), Denmark (+56%) and the Netherlands (+49%), with the highest unemployment rates being recorded in Belgium (9.4%), Ireland (8.4%) and Italy (8.1%).

The biggest increases in 1981 were recorded in Germany (+52.4%) and the Netherlands (+46.9%), two countries whose unemployment rates were well below the Community average.

Young people under the age of 25 continued to experience particular difficulties on the labour market. Youth unemployment now stands at 38.5% of the total jobless figure as compared with 40% in both 1979 and 1980, despite measures taken in a number of Member States to improve job prospects for this group.

For the first time since 1976 the number of young men out of work exceeded the number of young women. However, despite this relative decline, young women - in view of their lower activity role - continued to suffer an exceptionally high unemployment rate, accounting for more than 50% of total female jobless in France, Italy, the Netherlands and the United Kingdom.

Finally, although young job-seekers are better qualified than ever before, most of them have had to accept insecure jobs for which they are overqualified.

Women continue to be at a disadvantage on the labour market. Whilst their unemployment rate has dropped over the last three years as a percentage of the overall total (41.4% in 1981 as against 45% in 1980 and 45.8% in 1979), they are still encountering particular difficulties in finding jobs.

In the present situation unemployment is no longer simply a problem of mismatching. The economic crisis and the complexity of the problems facing the Community will have to be tackled with measures aimed at promoting economic growth and employment and at reorganising working time.

In the light of all this, the Commission, which is concerned to do what it can to remedy this serious situation, stated its position in a number of papers presented to the Council in 1981:

- in the context of the Mandate of 30 May 1980, the communication concerning priorities to be adopted in the field of job creation¹ was designed to promote measures aimed on the one hand at creating employment and providing vocational training for young people and on the other at encouraging small businesses to create new jobs;
- in the field of work sharing, the Commission stated its position on part-time work² and the age of retirement³.

³COM(81) 779 final.

II. NEW MEASURES RELATING TO THE MANAGEMENT OF THE FUND

1. Higher rate of intervention for Greece

On 13 July 1981 the Council decided¹, following a proposal from the Commission², to apply to operations carried out in Greece from 1 January 1981 the 10% higher intervention rate provided for in Article 8 of Council Decision 71/66/EEC³, as amended by Decision 77/801/EEC⁴. This higher rate is already applied to operations in Greenland, the French Overseas Departments, Ireland, Northern Ireland and the Mezzogiorno⁵.

2. Guidelines for the Management of the Fund

The Guidelines drawn up for the period 1981-83 have been retained for 1984 (OJ C 119, 14.5.1980, p. 2) for the simple reason that while they should reflect changes in the economic and social situation in the Community, experience has shown that the national authorities and project promoters need a degree of stability to be able to adapt their programmes to the priorities laid down. Furthermore, the fundamental problem of imbalance between the volume of applications and the appropriations available, which is illustrated by the figures given in this report, cannot be resolved satisfactorily simply by amending the Guidelines.

3. Submission of applications for assistance

On 10 November 1981 the Commission adopted a Decision⁶ amending Decision 78/742/EEC on the submission of applications for assistance and claims for payment from the European Social Fund.

This Decision provides for the use of new forms for claims for advance payments, additional payments and payment of balances from 1 January 1982 onwards.

The new format will make for more efficient management of the assistance granted and will reduce or even eliminate the too numerous requests for supplementary information made necessary after an appraisal of the dossiers. The new forms will also pave the way for a gradual introduction of data processing methods in the management of the Fund.

III. FINANCING AND BUDGET

A. COMMITMENTS

1. Available appropriations

The Commitment appropriations available to the Fund in 1981, which amounted to 1 108.38 million ECU, exceeded the total amount available in 1980 by 86.36 million ECU (8.46%).

The total was largely made up of appropriations under Chapters 50, 51 and 52 of the general budget of the Communities (963 million ECU as against 909.50 million ECU in 1980), with the addition of a further 145.38 million ECU made up as follows: unused appropriations amounting to 6.91 million ECU, an amount of 38.70 million ECU from commitments made prior to and during 1981 and made available for re-use following currency realignments decided in October 1981, and 99.77 million ECU in unused appropriations available for re-use.

In addition to the abovementioned appropriations released for re-use, funds amounting to 116.01 million ECU were made available but could not be re-used. These were appropriations returned to the Fund out of commitments entered into prior to 1 January 1980 and released for the most part in connection with final claims for payment submitted on winding up the operations concerned. These appropriations have consequently lapsed.

2. Utilisation of appropriations

Out of the commitment appropriations available, only 996.17 million ECU were committed, leaving 112.21 million ECU to be carried over to the next financial year.

There was a marked contrast between the rate of utilisation of appropriations in 1981 (89.88%) and that in 1980 (99.3%) owing to the fact that measures were taken in 1981 in response to the observations made by the authorities responsible for the administration and financial control of the Fund on the need to ensure that appropriations are not exceeded, as happened in 1980.

In order to take positive steps to allay the fears expressed by the Court of Auditors in its report on the financial year 1980, the Fund administration set up a reserve of appropriations in 1981 amounting to 8.9 million ECU to take account of any fluctuations in the exchange rate of the ECU against national currencies. This amount, which was deducted from the total of appropriations still available, was not drawn on when the decision relating to the last batch of approvals was made in September 1981.

Moreover, the rule according to which the Fund may, for any new commitment, use only those appropriations which have already been re-entered in the accounts after being released for re-use before the written procedure for granting approvals is introduced, effectively prevented the utilisation of a batch of appropriations released for re-use when the approval decision was taken on applications subject to the weighted reduction procedure.

Finally, quite apart from the effects of these measures, it should be noted that parity changes in 1981 had the opposite effect to those they engendered in 1980: total commitments, which stood at 1 028.89 million ECU in July 1981, underwent a net reduction as a result of the realignment of currencies within the European Monetary System in October, falling to 996.17 million ECU at the end of the year on the basis of the new exchange rates (December exchange rate).

3. Volume of applications

Applications for assistance from the Fund in 1981 amounted to 1 924.21 million ECU, 18.4% up on 1980. Available appropriations rose by only 8.46% compared with 1980, so that the gap between resources and needs widened further over the year.

The overall volume of applications exceeded available resources by about 74% compared with less than 60% in 1980.

In absolute terms, the volume of applications was highest in respect of "young people" (692.29 million ECU) and "regions" (660.51 million ECU). In percentage terms, "young people" (+49%) and "agriculture/textiles" (+37%) recorded the largest increases. Finally, the discrepancy between applications and resources was most marked for "migrant workers" and "women" (506.9% and 313.6% respectively).

4. Classification of applications

An amount of 219.82 million ECU (about 11% of the total volume of applications submitted) was classified as inadmissible, not eligible or non-priority. The remainder (1 704.39 million ECU) was examined for priority, classified according to the Guidelines for the Management of the Fund¹ and taken into consideration for financing within the limits of available appropriations.

The table below sets out the applications for assistance by field of intervention and level of priority.

Budget nomenclature	Priorities					Total
	1	2	3	4	5	
5000 Agriculture	17.42	-	-	-	-	17.42
5001 Textiles	20.14	12.28	-	-	-	32.42
5010 Young People - Training	118.78	95.86	221.01	-	-	435.65
5011 Young People - Employment	9.84	50.59	68.82	-	-	129.25
5030 Migrant Workers	138.02	-	-	-	-	138.02
5060 Women	17.05	87.02	-	-	-	104.07
50	321.25	245.75	289.83	-	-	856.83
5100 Regions	288.86	11.67	62.53	27.53	254.53	645.12
5101 Groups of firms	12.24	-	-	-	-	12.24
5102 Technical progress	28.69	13.78	-	-	-	42.47
5110 Handicapped persons	35.60	112.13	-	-	-	147.73
51	365.39	137.58	62.53	27.53	254.53	847.56
5200 Pilot schemes	-	-	-	-	-	-
50 - 52 Total	686.64	383.33	352.36	27.53	254.53	1,704.39
%	40.29	22.49	20.67	1.62	14.93	100.00

It will be noted that the overwhelming majority of applications deemed eligible for Community financing were placed in the first three levels of priority (83% of the total corresponding to 1 422 million ECU).

¹ OJ No C 119, 14.5.1980.

Member States' authorities have clearly applied a selection procedure before presenting applications for assistance to the Commission, but a substantial proportion of the applications had to be turned down owing to the considerable shortage of funds.

5. Weighted reduction

Applications classified as priorities represented a total of 1 704.39 million ECU, exceeding the available appropriations by some 596 million ECU. The discrepancy between needs and resources was thus quite considerable, representing 53% of available appropriations as against 19.5% in 1980. Under existing rules the weighted reduction procedure had to be applied to narrow this gap and achieve a balance between resources and needs¹.

As set out in the Guidelines for the Management of the Fund the weighted reduction procedure is applied where, at the lowest priority level for which appropriations are still available, the volume of applications exceeds that of appropriations. The weighted reduction coefficient for each Member State is calculated on the basis of the average unemployment rate and gross domestic product per capita at current exchange rates. This takes account of the unemployment situation in the various Member States and the financial resources available to each country to deal with it.

The total amount to be deducted is obtained by applying the appropriate coefficient to the applications for each Member State classified at the priority level subject to weighted reduction. The amount thus obtained is apportioned by the Commission between the individual applications after consultation with the national authorities.

¹For the reasons set out in paragraph 2 above, the availability of commitment appropriations in 1981 was affected by measures designed to reduce these appropriations. This is why the amount refused on the basis of the weighted reduction procedure amounted to 704.23 million (and not 596 million ECU).

The two tables below illustrate the effects of the application of the weighted reduction procedure by field of intervention and by country:

(a) Amounts approved by field of intervention after application of the weighted reduction procedure

(in million ECU)

Field of intervention	Total committed I	Committed without weighted reduction II	Amount subjected to weighted reduction III	Amount of III approved IV	Amount of weighted reduction (III-IV) V
Agriculture	5.69	-	17.42	5.69	11.73
Textile	15.48	-	32.42	15.48	16.94
Young people - training	269.72	214.64	221.01	55.08	165.93
Young people - employment	103.67	75.61	53.65	28.06	25.59
Migrant workers	30.55	0.33	137.70	30.22	107.42
Women	22.66	17.05	87.02	5.61	81.41
Regions	422.36	390.58	254.53	31.78	222.75
Groups of firms	8.11	-	12.24	8.11	4.13
Technical progress	32.14	28.69	13.78	3.45	10.33
Handicapped	89.78	35.60	112.13	54.18	57.95
Total	1,000.15(*)	762.49	941.90	237.66	704.23

(*) The discrepancy between the figures relating to "amounts committed" in the various tables stems from the use of a single exchange rate - that applying in December 1981 - for the "non-budget" tables. In order to simplify the presentation of these tables, the monthly updating for accounting purposes reflecting the effect of exchange rate fluctuations on the amounts of the appropriations still to be paid have been disregarded.

(b) Amounts approved after application of the weighted reduction procedure by country

(in million ECU)

Country	Applications subject to weighted reduction	Weighted reduction indicator	Amounts approved (*)	Amounts allocated as percentage of I
	I	II	III	IV
Belgium	20.41	1.24	6.56	32.1
Denmark	31.27	0.78	8.35	26.7
Germany	285.76	0.42	25.76	9.0
France	234.48	0.85	51.22	21.8
Greece	-	-	-	-
Ireland	2.29	3.01	1.91	83.4
Italy	173.54	1.93	78.06	45.0
Luxembourg	0.63	0.07	0.02	3.1
Netherlands	22.77	0.73	3.91	17.2
United Kingdom	170.75	1.57	61.88	36.2
Total	941.90	-	237.66	25.2

(*) The amounts approved do not depend solely on the application of the weighted reduction indicator to the volume of applications submitted by each country and classified at the lowest level of priority, but also on the degree of mismatch in each field of intervention between the total volume of applications by each country and available appropriations.

These two tables show that in 1981 the weighted reduction procedure had to be applied for the first time to all fields of intervention. The overall amount affected was 704.23 million ECU (as against 234.14 million in 1980), i.e. 41.3% of the total volume of applications classified as priorities (as against 18.5% in 1980). This was an increase of more than 200% over the twelve month period.

The weighted reduction was highest for "regions" and "young people" (222.75 million ECU and 191.52 million ECU respectively). However, the proportion of applications to which it was applied was highest for "migrant workers" and "women". In both cases, the amount of the reduction was far in excess of the amount committed.

5. Article 9(2) of Council Decision 71/66/EEC

This provision requires that at least 50% of the budget of the Fund be reserved each year for operations carried out under Article 5(1) of the above Decision in the European Regional Development Fund regions.

The effect of this provision in 1981 was as follows:

	<u>(million ECU)</u>
I. Budget allocation	963.00
II. Commitment appropriations entered in the budget for operations under Article 5(1) of Council Decision 71/66/EEC	518.00
III. Commitment appropriations to be set aside pursuant to Article 9(2) of the abovementioned Decision (50% of total)	481.50
IV. Remaining commitment appropriations available for use under Article 5(1) of Decision 71/66 for operations outside ERDF regions	36.50

As a result of this calculation, only 36.50 million ECU were available to finance operations in the categories "technical progress", "groups of firms" and "handicapped persons" in regions other than ERDF regions.

B. PAYMENTS

1. Appropriations available

Payment appropriations amounted to 819.08 million ECU in 1981, made up of the budget allocation of €20.40 million ECU plus 198.68 million ECU carried over from the previous year. Total appropriations, therefore, were 12.3% or 114.78 million ECU below those available in 1980.

The significant carryover of appropriations into 1981 (198.68 million ECU) represented the unused part of appropriations made available under the supplementary budget approved on 23 December 1980 when the Fund was credited with payment appropriations amounting to 326.4 million ECU. The Commission had requested only 100 million ECU and was able to use only 127.72 million ECU before the end of the financial year.

Transfers of appropriations during 1981 were made within individual chapters. Accordingly, although the amounts available under each budget heading may have changed the transfers did not alter the overall amount of appropriations allocated to each chapter.

2. Utilisation of appropriations

An amount of 745.85 million ECU was used in 1981 out of a total of 819.08 million ECU available¹. The bulk of the appropriations remaining at the end of the year (73.23 million ECU) was carried over to the following year (73.01 million ECU), whilst a very small part of the unused appropriations was cancelled (0.22 million ECU).

¹The discrepancy between the figures relating to "amounts paid" in the various tables is due to the use of a single exchange rate - that of December 1981 - for "non-budget" tables. These tables have been set out in a simplified form disregarding monthly updates in the accounts and taking into account the amounts paid at the exchange rate for the month concerned.

These figures show that the rate of utilisation of available appropriations (91.06%) was lower than in 1980, when appropriations available at the beginning of the year were used up by November necessitating the submission of a request for a supplementary budget.

Utilisation of available appropriations was particularly low in the categories "pilot schemes" (chapter 52) and "regions" (heading 5100), at less than 45% and a little more than 80% respectively. The latter area of intervention (with some 69.25 million ECU unused at the end of 1981) had the greatest impact on the management of appropriations during the financial year.

Paradoxically, whilst 73.23 million ECU were still unused at the end of 1981, a volume of applications for assistance amounting to 85.91 million ECU could not be satisfied for lack of appropriations under the budget headings concerned. These applications concerned in the main claims for payment of advances relating to commitments made in September 1981. Of this total, over 63 million ECU related to "young people".

In normal circumstances it would have been possible, by means of transfers between chapters, to provide the budget headings concerned with at least a large part of the appropriations required. However, this could not be done as the bulk of these claims was not submitted to the Commission until December and it was therefore not possible to complete the necessary procedure before the end of the financial year.

3. Payments made

In 1981, payments relating to commitments made during the year amounted to 289.99 million ECU, about 29% of the appropriations committed.

This figure might have been higher if there had been an adequate volume of appropriations to meet a final batch of claims for payment submitted at the end of the year, amounting to 85.91 million ECU. Of this total, some 69 million ECU related to commitments made during 1981.

The table below gives a breakdown of payments made in 1981 by Member State and year in which appropriations were committed:

(million ECU)

Country	1975	1976	1977	1978	1979	1980	1981	Total
Belgium				0.02	1.64	7.21	4.97	13.84
Denmark				0.16	2.51	5.32	10.57	18.56
Germany		0.14	2.77	7.96	9.02	27.37	20.77	68.03
France	0.16	0.02	1.67	9.84	62.44	52.27	24.43	150.80
Greece							6.64	6.64
Ireland			1.11	2.70	4.74	3.63	48.36	60.54
Italy		0.01	6.70	43.50	32.28	54.73	74.73	211.96
Luxembourg					0.43	0.07		0.50
Netherlands			0.28	0.03	3.32	8.41	2.21	14.25
United Kingdom		0.39	1.48	2.26	55.24	35.33	97.34	192.04
Total	0.16	0.56	4.01	66.47	171.62	194.34	289.99	737.16

4. Pattern of payments

The following two tables illustrate some of the most significant trends in the pattern of payments in recent years:

(a) Annual variation in appropriations committed and unclaimed balances at the end of each year (1977 to 1981)

Year	Appropriations committed	% change	Appropriations unclaimed at year end	% change
1977	616.63	-	953.37	-
1978	568.08	- 7.87	1,221.15	+ 28.09
1979	774.45	+36.32	1,341.00	+ 9.81
1980	1,014.93	+31.05	1,399.88	+ 4.24
1981	996.17	- 1.85	1,375.70	- 0.30

(b) Advances and other forms of payment as part of total payments made (1979 to 1981)

(million ECU)

Year	Advance payments	Additional and final payments	Total
1979	441.79 (74.3%)	152.81 (25.7%)	594.60 (100%)
1980	479.08 (65.6%)	250.82 (34.4%)	729.90 (100%)
1981	470.27 (63.79%)	266.89 (36.21%)	737.16 (100%)

An analysis of these two tables shows that payments of balances and additional payments are being made at a satisfactory rate. Appropriations used in the form of payments of balances or additional payments have increased regularly from year to year both in terms of volume and percentage (see table (b) above). Moreover, over the last three years there has been no abnormal accumulation of appropriations committed and unclaimed at the end of each financial year (see table (a)).

There has in fact been a marked reversal in the overall trend. Up to 1978 the volume of appropriations remaining unclaimed at the end of the year was rising roughly in proportion to the volume of appropriations committed each year. Moreover, at the end of that year, a significant increase in unclaimed appropriations was recorded even though there had been a decline in appropriations committed.

From 1979 the above trend was reversed: the amount of appropriations unclaimed at the end of the year has risen much less steeply over the past two years than the amount of appropriations committed. At worst, the volume of unclaimed appropriations is likely to follow the trend in appropriations committed, as was the case in 1981.

It is worth noting that this reversal in the respective trends of appropriations committed and appropriations remaining unclaimed coincided with the introduction in 1979 of a rule setting a time limit of 18 months for the submission of claims for payments of balances¹. This time limit, which begins at the end of the scheduled completion date of the operations being carried out, has significantly expedited the submission of such claims. Payment of balances now no longer poses the same problems as in the past and payments are being made at a satisfactory rate.

As for advance payments, the state of affairs is less satisfactory. Whilst 29% of appropriations committed in 1981 were paid during the year (as was the case in 1980), the rate of payment of advances has not progressed significantly in recent years. In fact, these payments have tended to diminish both in volume - as was the case in 1981 compared with 1980 - and in percentage - as was the case in 1980 and 1981 compared with 1979 (see table (b))².

¹Article 4 of Commission Decision EEC/78/706, 27.7.1978 (OJ No L 238/20, 30.8.1978).

²The situation as regards payment of advances would have been quite different in 1981 if it had been possible to meet claims for payment submitted at the end of the year for an amount of 85.91 m ECU, as explained at the end of para 2 above.

This situation probably stems from under-utilisation of the second advance procedure. A more systematic recourse to this procedure by the Member States could help accelerate the rate of payments and reduce the size of balances unclaimed at the end of the financial year.

These conclusions are borne out by estimates according to which, in addition to payments actually made, an amount of 376.7 million ECU could have been claimed in 1981 (see the following table):

	<u>millions ECU</u>
- Appropriations unclaimed at 31 December 1981	1,395.00
<u>Less:</u>	
- Probable volume of cancellations	100.00
- Commitments made prior to 1 January 1981 relating to 1982/83 (estimate)	200.00
- Commitments made in 1981 for which payments could not have been claimed in the same year (estimate)	500.00
- Requests for payment of advances not met owing to lack of appropriations	85.90
- Unused appropriations released for re-use in 1982 out of appropriations committed in 1981	80.00
- Payment claims being processed by the Commission	52.40
	<hr/>
Total:	1,018.30
Unclaimed balance	376.70

This state of affairs notwithstanding, the payments situation in 1981 represented an improvement on 1980 given that the unclaimed balance of payment appropriations was about 20% lower (376 million ECU as against 472 million in 1980).

ON-THE-SPOT CHECKS

1. On-the-spot checks were carried out on 50 dossiers in 1981. This entailed scrutiny of supporting documents and an examination of the way in which operations receiving ESF assistance were being conducted. In some instances it was necessary to collect additional information for an appraisal of other applications for assistance or claims for payment submitted by the organisations in question.

Where checks revealed significant discrepancies between the nature of the operations and the description given in the relevant approval decision, the Commission took steps to reduce the amount of assistance granted and to recover part or all of the advances improperly claimed.

The discrepancies concerned for the most part insufficient grounds for expenditure, non-compliance with special criteria applying to certain types of operation and time scales at variance with those proposed. Time lags in completing projects would appear to be one of the main reasons for failure to use appropriations committed.

On-the-spot checks carried out by Social Fund staff and Financial Control related in the main to projects where claims for payment were incomplete or gave rise to doubt. In considering such discrepancies no general conclusions should be inferred for the rest of the schemes being financed.

2. Financial Control, in conjunction with the authorizing departments and the Court of auditors, is analysing the management and financing systems used by the national authorities and the main organisations receiving Community aid. In 1981, four Member States' systems were analysed: Belgium, France, Italy and the Netherlands.

IV. ACTIVITIES BY FIELD OF INTERVENTION

1. Persons leaving agriculture

Volume of applications and commitment appropriations

The rise noted in the volume of applications for assistance from the Fund submitted under Council Decision 72/428/EEC¹ to assist persons leaving agriculture tended to level out, the total amounting to 18.1 million ECU compared with 16.3 million ECU in 1980 - a relatively modest increase (11.8%).

Once again the largest volume of applications was submitted by France (over 51% of the total) and Italy (over 34% - a 50% increase against the previous year). Applications submitted by the Federal Republic of Germany and Ireland represented 6% and 7% respectively. No applications were submitted by the other countries.

For the first time, the budgetary appropriation for this field of intervention was distinguished from that for textiles: it amounted to 5 million ECU. The amount not taken up in 1980 brought the available appropriation to 5.8 million ECU.

Selection criteria and general characteristics of applications

As in 1980, only one level of priority was accorded in the agricultural sector, to operations:

- coming within the framework of specialised measures for the agricultural sector or for the rural environment;
- taking place in disadvantaged areas (with an income below the Community average, or certain hill farming areas)² intended for persons who have left or are leaving agriculture.

¹

OJ No L 291, 27.12.1972, p. 158; OJ No L 337, 27.12.1977, p. 10.

² Areas specified in Council Directive 75/268/EEC, OJ No L 128, 19.5.1975, p. 1.

Most of the operations formed part of programmes financed by national public bodies (Germany, France) or regional bodies (Ireland, Italy).

The operations were similar to those implemented in 1980, namely training for workers leaving agriculture, essentially for occupations in the tourist industry and to meet the needs of small and medium-sized firms or for agriculture-related trades (for example, repairing machinery).

Assistance granted equalled the total appropriation available, namely 5.8 million ECU. Since the volume of priority applications totalled 17.9 million ECU, a weighted reduction had to be applied for the first time in 1981. It concerned an amount of 12 million ECU, i.e. 67% of this total.

Beneficiaries

Bearing in mind the fact that the weighted reduction method had to be applied, the programmes approved in 1981 should benefit about 5,822 people.

2. Persons working in the textile and clothing sectors

Volume of applications and commitment appropriations

The volume of applications for assistance submitted for workers in the textile and clothing sectors as provided for under Council Decision 76/206/EEC¹ amounted to 36.6 million ECU against 22.6 million ECU in 1980 - a 61.9% increase.

The budgetary provision for this sector was 13 million ECU. However, taking refunds into account the total available appropriations amounted to 16.06 million ECU against 18.9 in 1980. In other words, resources amounted to 84.9% of those available the previous year while the volume of applications was 62% greater.

For the first time, there was a shortfall in the resources available to finance eligible operations.

Selection criteria and general characteristics of applications

As opposed to previous years when only one level of priority was established, in 1981 two levels were applied:

A. First level priority was accorded to operations for:

- persons leaving the sector in areas with a high unemployment rate;
- persons remaining in the sector, when the operation formed part of a conversion or restructuring programme.

B. Second level priority was accorded to:

- other operations, either for persons remaining in the sector or leaving it, where training corresponded to the requirements of jobs assured in advance by employers.

About 60% of the operations classified as first priority concerned training for workers leaving the sector in textile-producing areas where unemployment is higher than the national average. These workers select a wide range of sectors, in particular construction, metal or woodworking, the chemicals and pharmaceuticals industry. Forty percent of these applications related to vocational retraining for viable activities within the textile sector.

¹ OJ L 39, 14.2.1979, p. 39, OJ L 337, 27.12.1977, p. 10.

All these applications for assistance were associated with the need for modernisation, adaptation to technological change, requirements of fashion, creation of new jobs and reorganisation of work.

Given the extremely high influx of applications in the textile sector in 1981 and the requirement to allocate two priority levels, in examining applications consideration was first given to conversion and restructuring operations with wide-ranging and significant implications, frequently entailing transition from one type of production to another.

Applications classified as first priority alone amounted to about 20.8 million ECU. On the basis of the weighted reduction method, financing was approved for 16.04 million ECU - 77% of total first priority.

Applications classified as second priority could not be financed.

Beneficiaries

Programmes approved in 1981 are estimated to benefit about 8,800 workers.

3. Migrant Workers

Volume of applications and commitment appropriations

In 1981, there was an unprecedented gap between the volume of applications for Social Fund assistance for migrant workers and their families under Council Decision 77/803/EEC¹ and the appropriation for this sector. The total volume of applications rose from 153 million ECU in 1980 to 189 million ECU in 1981 while the appropriations earmarked for this field of intervention were cut from 38 million in 1980 to 30 million in 1981.

Nor was it possible - as it had been in previous years - to transfer funds from other fields of intervention, with the result that the resources available represented 16.5% of the total volume of applications.

Faced with this exceptional budgetary situation and having consulted the Fund Committee, the Commission requested a group of experts to carry out a study on Fund aid to migrant workers.

It is already known that the increase in the volume of applications is not due to an increase in the number of migrant workers in the Community. Statistics show no substantial change in the total number of migrants workers in the Community since 1980, returns to the country of origin being offset by the arrival of families in the host countries and refugees from non-member countries.

It is clear, however, that with the increase in unemployment in the Community affecting all categories of workers, those who have been hardest hit are the migrant workers and particularly their children, many of whom are unqualified and swell the ranks of young job-seekers.

This accounts for the substantial increase in the volume of applications following Member States' efforts to deal with the ever more acute problems facing migrant workers.

¹ OJ No L 337, 27.12.1977, p. 12.

Selection criteria and general characteristics of applications

Three types of action are eligible under Council Decision 77/803/EEC¹:

- integrated programmes, defined as measures necessary to ensure the effectiveness and continuity of action throughout successive phases of migration, and limited to migrants moving from one Community country to another;
- integration measures i.e. programmes to assist integration into the social and working environment which, although not part of an integrated programme, facilitate the social and occupational integration of migrant workers and their families, and are not limited to migration within the Community;
- training of teachers and welfare workers.

Given this context, the guidelines contained a single level of priority to:

- integrated programmes covering at least two phases of the migration process;
- training of social workers and teachers;
- demonstration projects aimed at improving the standard of special teaching for migrants' children, for a maximum of three years;
- language tuition or vocational preparation which includes a substantial element of language teaching.

These provisions also applied to migrants arriving in the Community in emergency conditions.

Integrated programmes

As in previous years, integrated programmes were submitted mostly by Italy and Germany, while a small Irish programme approved in 1980 to assist the return of emigrants to take up employment in key sectors at home was continued. The German applications related to Italian and Greek migrant workers and their families.

¹OJ No L 337, 27.12.1977, p. 12.

The Italian programmes were mainly geared to assisting adults and their children to re-integrate on their return to Italy. Teaching of the mother tongue combined with courses peculiar to the Italian school system leading to certificates such as the "licenza media" were emphasised. These courses are given in four private institutions abroad that are recognised by the Italian Government.

The development of interest in reverse migration was illustrated by the increase in the number of programmes to facilitate the reintegration of migrant workers in their country of origin submitted by various regional authorities.

The programmes submitted by Germany, on the other hand, were designed to further the integration of migrant workers into the German labour market. The measures aimed at improving working conditions and the life-style of the persons concerned as well as arousing interest in the concept of the environment; therefore, tuition in the German language became a key element in the operation. Another aspect worthy of note was the emphasis on reception, information and guidance activities to be carried out by groups of counsellors set up to facilitate workers' adaptation.

The total cost of integrated programmes amounted to 27 million ECU, or 19.6% of the total volume of priority applications.

Integration measures

Most of the applications submitted under this heading and given a priority rating included vocational training courses with a substantial element of language teaching.

The French applications covered a wide range of vocational preparation measures. Some programmes began with elementary instruction (e.g. reading and writing) while others were entirely devoted to vocational training.

Vocational preparation programmes aimed at young migrants were also submitted by Germany, Belgium and Denmark.

Examination of the programmes submitted to the Social Fund shows that the Bundesanstalt für Arbeit (the Federal Labour Office) has expanded its concept of vocational integration for the young migrant. Following the lead given by this body, the applications submitted by public and private bodies concerned special programmes devised by each promoter.

Only a few demonstration projects were submitted, mainly concerning the children of migrant workers. They were mostly the product of private bodies in Germany, Belgium, France, Greece and the Netherlands.

One Greek programme was designed to improve the integration of the children of returning migrant workers by exploiting the experience gained by the children during their stay abroad, notably via the follow-up to the German programmes.

On the other hand, other programmes in this category tended in the main to emphasise the adaptation of children to life in foreign countries, either by concentrating efforts on environmental measures or through the formation of groups to take action beyond the purely educational tasks performed by the teachers.

Applications in this area classified as priority totalled 110 million ECU, or 80.3% of total priority applications.

Training of social workers and teachers

Applications under this field of intervention reflected a keen desire to supplement traditional teacher training by training more adapted to the needs of migrant workers' children. This was particularly true in the case of certain Länder in Germany and in France and the Netherlands.

Greece submitted a programme of this type mainly designed to prepare teaching staff for the education of Greek children abroad.

Programmes specially designed for staff in charge of preparatory training and language courses for migrant workers and their children were also submitted by France and the United Kingdom.

The integrated programmes referred to earlier submitted by Italy included this type of action.

In the United Kingdom, certain programmes included on-the-job training for workers.

Lastly, some projects included training especially designed for social workers and language teachers to help instruct migrant workers employed in Germany, Belgium and Denmark.

Programmes approved in this category were estimated at one million ECU.

Beneficiaries

It is estimated that Fund operations approved in 1981 would contribute to the education of some 87,000 migrant children and assist courses adapted to the linguistic and occupational needs of 169,000 young migrants and adults and specialised training courses for 2,300 teachers and social workers.

4. Young people

Volume of applications and commitment appropriations

The volume of applications under Council Decision EEC/75/459¹ for assistance for young persons reached 685 million ECU in 1981, a 13% increase over the previous year. Of this, 520 million ECU concerned training programmes and 165 million ECU concerned employment promotion under Council Regulation (EEC) No 3039/78². A spectacular increase in 1980 was followed by a slow-down in the growth of the volume of applications despite the rising rates of inflation and the number of applications submitted for the first time by Greece. This is particularly true of applications relating to training schemes, which increased by approximately 10% between 1980 and 1981 as against 30% between 1979 and 1980.

The budgetary allocation of 372 million ECU (264 million ECU for training and 108 million ECU for employment aids) was augmented by refunds of 37 million ECU to bring total available appropriations in this field to 409 million ECU, i.e. 6.3% higher than in the previous year.

General characteristics of applications and selection criteria

The intention to achieve simplification and harmonisation, which was the hallmark of the reshaping of the Guidelines for the management of the Social Fund in 1981, was given practical effect in the following way with respect to assistance for young people:

- (1) with regard to the geographical scope of priority "young people" regions³, ordinary applications for assistance were classified according to the following three levels:
 - (a) six regions qualifying for the higher rate of intervention⁴ (Greenland, French overseas departments, Ireland, Northern Ireland, Mezzogiorno, Greece);

¹OJ No L 199 of 30.7.1975, p. 36; OJ No L 337 of 27.12.1977, p. 10.

²OJ No L 361 of 23.12.1978, p. 3.

³See list published in OJ No C 42 of 27.2.1981, p. 3.

⁴OJ No L 337 of 27.12.1977, p. 7; OJ No 194 of 17.7.1981, p. 4.

- (b) areas with weak economic structures affected by restructuring or conversion measures;
- (c) other regions and areas for operations identical to those classified under (a) and operations which, though eligible, could not be classified under (b).

Priority "young people" regions are established on the basis of unemployment among young people as revealed in the biennial labour force survey produced by the Statistical Office of the Communities. They must have an unemployment rate over 30% higher than the national average in countries in which the regions overall have a rate lower than the Community average.

Restructuring and conversion areas are defined on the basis of per capita gross domestic product and unemployment rate (to assess the general economic and social situation) and the degree of dependence on employment in four sectors (coal, iron and steel, textiles/clothing and shipbuilding).

Following discussion with the Member States concerned, a list was drawn up of the areas in which employment showed a concentration in several of these four sectors or a high concentration in one of them.

- (2) Certain applications were exempt from the geographical conditions defined in (1) above. Subject to certain conditions, these involved:
 - (a) programmes for the training or re-training of young women to promote a more even mix of job opportunities in new occupations and jobs in which women are under-represented;
 - (b) programmes financed exceptionally for a maximum of three years with the aim of either:
 - improving local training structures;
 - providing new training/work experience schemes¹ on an experimental basis for a limited number of persons (not more than 200).

¹OJ No C 1, 3.1.1980, p. 1 (Council Resolution of 18.12.1979 on linked work and training for young people).

Lastly it should be noted that in all cases the operations figuring in the application had to have a link with the labour market. Moreover, training operations were reserved for first job seekers and, in restructuring or conversion areas, were to support conversion and restructuring programmes.

Training programmes

In general, more than 90% of approved applications related to major national programmes. National public authorities (notably in Belgium, the United Kingdom, France and Ireland) or public or private bodies with national scope (Italy) were involved. In other cases (Germany and Italy), the regional authorities ensured the implementation of national programmes while also organising their own programmes. Lastly, there was an increase in the number - still modest - of programmes implemented by local authorities (e.g. in Denmark and the United Kingdom).

First priority was accorded:

- in the six regions receiving the higher rate of intervention:
 - to vocational preparation and pre-training programmes conducted to fill non-skilled or semi-skilled jobs or for admission to skilled training courses (including upgrading and active vocational guidance measures);
 - to training or re-training programmes.
- Throughout the Community:
 - to training schemes for young women.

As in the preceding years, the programmes submitted were principally concerned with vocational preparation for disadvantaged young people without training, who make up the large majority of the long-term unemployed. Most of the Member States experimented with measures and gradually set up reception structures for this category of young people, who were unable to make use of traditional channels to obtain preliminary training.

The training programmes for young women involved approximately 18,000 persons, i.e. 41% more than the previous year; those submitted by Germany were on the largest scale. It was possible to distinguish between three types of programme in this country, according to the level at which they were promoted. The national authorities financed multi-skill programmes in the regions according to the type of technology involved (mechanical or electrical engineering, forging, etc.) leading subsequently to various specialisations related to labour market needs. The programmes directly financed by the Länder were more influenced by the job vacancy situation and were consequently more or less specialised. Lastly, at local level, there were small specialised programmes linked to jobs specified by employers.

The sums involved in the programmes classified as first priority amounted to 118.1 million ECU.

Programmes implemented in restructuring or conversion areas with weak economic structures were accorded second priority. In the case of vocational preparation or pre-training, the schemes had to be linked to labour market needs. Training and retraining schemes had to support conversion or restructuring programmes.

In both cases it appeared, when the applications were submitted and examined, that the Member States had particular difficulty in meeting the selection criteria mentioned above, especially where it was a question of completing the simple calculation based on the estimates for the application of national measures in these areas. While leaving the Member States to choose the means, the Commission was bound to ensure that the operations it supported were well-adapted to labour market needs in these areas where employment is threatened by the decline of dominant industries to a degree which has resulted in the implementation of Community policies.

Programmes classified as second priority amounted to 93.5 million ECU.

Programmes classified as third priority amounted to 222.3 million ECU. A weighted reduction of 166.9 million ECU, i.e. 32% of the total volume of applications relating to training schemes, was applied to this last level of priority.

Experimental training schemes

- Improvement in local training structures

Among the operations financed on an exceptional basis to promote an improvement in local training structures, the pilot schemes at Arhus and Strorstrøm ("amtskommuner") in Denmark are worthy of mention. These operations were implemented on behalf of 1,950 young long-term unemployed. The girls were particularly interested in training for jobs traditionally occupied by men. The originality of this operation consisted in the guarantee provided by the employment board on completion of the guidance and preparation period. This guarantee covered either:

- advanced training (long courses), or
- short training periods alternating with practical work experience in a firm, or
- a job under normal conditions in the private sector for at least nine months.

Linked work and training

The new training/work experience operations related to the Council Resolution of 18 December 1979¹. In this Resolution, the Fund was requested to cooperate with the Member States in the spirit of Article 7 of the Regulation with regard to preparatory studies and pilot schemes. In application of the guidelines referred to above under item 2(b) second indent, the Commission approved 18 applications involving approximately 3,000 young people.

These applications covered a varied range of operations. For the most part they were programmes implemented by the local authorities for particularly disadvantaged young people. This was notably the case in the United Kingdom, with schemes for small groups which made it possible to provide individual follow-up. These groups received theoretical training of 360 hours adapted to the specific features of occupations in four sectors (distributive trades, hotel and catering trades, tourism and travel agencies, printing and paper manufacture) besides various manufacturing industries. In particular, the experiment was concerned with adapting theoretical training through the adoption of a modular

¹OJ No C 1 of 3.1.1980, p. 1.

system designed to enable each young person to attain the highest level of training within his capacity. In France, in the Rhône-Alpes region, a programme was set up for young people from rural areas wishing to find jobs in the catering industry or in connection with mountain sports. The objective in this case was to provide an officially recognised diploma and a guarantee of employment in the region.

In Northern Italy, the problem was one of updating teaching methods and meeting the specific needs of sectors in which there was no training appropriate to the jobs on offer. For example, cartography, illuminated advertising signs, cinema and television trades (Lombardy), textiles, electronics and electrical engineering (Tuscany), wine-growing, horticulture, animal husbandry (Emilia Romagna). In some cases training was directly linked to measures to improve the living environment, e.g.: renovation of the historic centre of Parma, safeguarding the nature reserve in Ticino (Lombardy).

Lastly, in the Netherlands, linked training and work experience was used for girls to help them to embark on courses of training customarily reserved for boys - two-year training for skilled jobs in the construction, metal and woodworking sectors.

The results obtained by these experimental programmes will be set out in future annual reports.

Employment aids

The number of beneficiaries under this heading is estimated at approximately 141,460, divided as follows: two-thirds under recruitment subsidies to firms providing additional jobs and one-third under job-creation measures relating to community work projects designed to meet unfulfilled needs. In volume terms, France and the United Kingdom (each with 42%) accounted for the greatest shares of applications relating to recruitment subsidies, while Germany (12%), Belgium (22%) and the United Kingdom (48%) were in the lead as regards community work projects.

First priority was accorded to operations in regions qualifying for the higher rate of intervention (referred to under 1(a) above) which received 9.89 million ECU, representing respectively 6.8% (recruitment subsidies) and 2.8% (community work projects) of total resources available for employment aids. Second level priority was accorded to operations in the areas referred to under 1(b) above; the total granted was 49.5 million ECU, representing respectively 35% for recruitment subsidies and 13.2% for community work projects.

Third level priority was accorded to operations in the remaining priority "young people" regions referred to in 1(c) above; in this case the total granted was 43.17 million ECU, representing respectively 27.3% for recruitment subsidies and 14.8% for community work projects.

A weighted reduction of 25.82 million ECU was applied to third level priority recruitment subsidy operations, while the appropriations were sufficient to enable all applications concerning community work projects to be approved.

Beneficiaries

It is estimated that operations approved in 1981 will help to train 295,300 young persons and find employment for some 141,460 young people under the age of 25.

Application presenting special problems

The public authorities of a Member State decided to implement a measure aimed at setting up additional local structures for pre-training and vocational preparation organised by local authorities - or groups of local authorities - for young long-term unemployed.

The features of the operation are as follows:

- tripartite management - high quality of staff and facilities - integration of the preparatory and guidance stages;
- guarantee of an appropriate outlet for individual capacities (long training course; short training periods alternating with work experience; semi-skilled employment for nine months).

Before a more general application of this measure, the Fund was requested to contribute to the financing of a first experimental application in two communes.

In view of its limited geographical scope, this kind of scheme is generally accorded third level priority.

The problem was whether the measure was innovatory, and if so, whether the application for assistance could consequently be given first priority.

The ESF Committee was consulted and gave a favourable opinion.

The Commission exceptionally accorded this application first priority since its aim is to set up at local level an original training structure for a category of disadvantaged young people while at the same time providing an opportunity for each of them to escape unemployment permanently.

5. Women

Volume of applications and commitment appropriations

The volume of applications relating to measures for women provided for by Council Decision 77/804/EEC¹ reached 103 million ECU in 1981, i.e. 45% more than in the preceding year.

This increase is attributable on the one hand to the Commission's continued promotional work as regards opportunities for assistance from the Fund and, on the other hand, to the attempts of Member States to implement a greater number of schemes eligible for first priority classification.

Germany alone submitted applications amounting to 89.9 million ECU, or 87% of the total volume under this heading. The budgetary allocation for this area of intervention was 22 million ECU, while refunds amounting to 0.5 million ECU brought the available appropriations to 22.5 million ECU, an increase of 6.6% over 1980.

There was therefore a more marked shortfall in the funds available to finance eligible applications than in preceding years.

Selection criteria and general characteristics of applications

The Commission had fixed the same priorities for 1981 as in 1980, namely:

- A. - first priority was accorded to:
 - operations to promote a better mix of job opportunities in new occupations and occupations in which women are under-represented;

- B. - second level priority was accorded to:
 - operations concerned with jobs traditionally occupied by women, but:
 - . intended for women who were victims of mass dismissals, or
 - . enabling women to obtain more highly skilled jobs.

¹ OJ No L 337 of 27.12.1977, p. 13.

An increase in the volume of first priority operations, already noted in previous years, was again recorded in 1981.

This rise was particularly marked in Germany, Belgium, Italy and the United Kingdom. Greece - a new Member State, admittedly - and Luxembourg made no applications under this heading.

The training programmes accorded first priority, while more numerous, did not differ appreciably from those of preceding years, which reflected a consistent approach on the part of the promoters to the problems of women job-seekers.

This stability also resulted partly from the fact that for most operations approved, the promoters and organisers were the same as in 1979 and 1980.

Moreover, the fact that identical guidelines have remained in effect from year to year has facilitated the running-in necessary to the implementation of operations in a relatively new sector.

Among the first priority applications, an innovatory programme in the United Kingdom is worthy of note. Among other things, this programme included a request for assistance with respect to the remuneration of a nursery nurse in charge of a nursery used by the children of trainees. There is no need to underline the advantage of a programme meeting in this way - for the first time, it must be emphasised - the increasingly urgent demands of women confronted by the dual responsibilities of work and family.

The Italian applications were mainly lodged by private bodies or regional authorities. They concerned the training of women for various occupations such as storekeeper, industrial accountant, hotel industry employee (porter, receptionist, manager, book-keeper) or for administrative and managerial activities.

Others, continuing the trend which emerged in 1980, were based on the creation of cooperatives aimed at training women for managerial jobs in craft industries.

In this respect mention should be made of a programme carried out by a private body to train some 50 women in the Mezzogiorno in crafts occupations or for positions of responsibility in small local firms. These cooperatives, situated in Sardinia, Campania and in the Abruzzi were set up by the promoter, prior to the training courses, to guarantee employment.

In Belgium, a scheme to provide training for administrative posts and positions of responsibility has been launched in the small business sector. Apart from the motivation stage in which individual aptitudes are developed, this operation comprises theoretical and practical training supplemented by preparation for working in a self-employed occupation.

Also in Belgium, pre-training schemes were set up in line with models which have been tested in France over some years. They consisted of three stages: assessment of individual aptitudes and the development of basic skills, information on the labour market and the acquisition of practical on-the-job experience in the chosen occupation.

The two promoters included psychological back-up and individual assessment of progress for the trainees in their programmes.

It was possible to finance the applications accorded first priority in their entirety, involving a sum of 17 million ECU as against 14 million ECU in 1980, an increase of 21.4%.

It is worth noting that little use has been made of the opportunity to benefit from the higher rate of intervention. Operations carried out in absolute priority regions accounted for only 9.3% of commitments in 1981. Apart from Ireland, an absolute priority country, Italy alone implemented operations in the Mezzogiorno accounting for 42% - a not insignificant proportion - of the total volume of applications as against 58% for the rest of the country.

Second level priority operations to prepare women for more highly skilled jobs totalled 84.6 million ECU. Since the resources available after the first priority applications had been financed totalled 5.5 million ECU, a weighted reduction of 93.4% had to be applied to the total amount for this category of application.

Germany remained the principal beneficiary of the assistance granted, receiving 12.9 million ECU as against 14.1 million ECU in 1980, i.e. 57% of available funds as against 66% followed as in 1980 by Italy and France.

Beneficiaries

The number of women aged over 25¹ estimated to be benefiting in this intervention field was approximately 10,900. Among these, 7,000 were channelled into new occupations or occupations in which women are under-represented. It should be noted that women are also beneficiaries under other fields of intervention.

As was pointed out in part 4 (Young people), approval was given under the heading of aid for young people to schemes to train young women under 25 for occupations in which women are under-represented or for new types of employment accessible to both male and female workers, amounting to expenditure of 23.59 million ECU and involving 18,500 young women.

In the other intervention fields of the European Social Fund, men and women are of course placed on an equal footing; figures provided by the Member States show that, as in 1980, a little over 30% of Social Fund beneficiaries are women.

¹OJ No L 337 of 27.12.1977, p. 14.

6. Regions

Volume of applications and commitment appropriations

The volume of applications for assistance relating to measures for the benefit of workers in less-developed or declining regions submitted under Article 5 of Council Decision 71/66/EEC¹ amounted to 675 million ECU in 1981, a 12.5% increase on 1980. The 1980 increase on 1979 was almost identical: 12%. The budgetary provision devoted to "Regions" in 1981 amounted to 395 million ECU, the same figure as for 1980; the latter figure, however, also included appropriations for technical progress and groups of firms.

Taking into account refunds which, as in 1980, were very substantial, the total volume of commitment appropriations available came to 466 m ECU as against 455 million in 1980 - i.e., a slight increase (2%).

The relative shortage of funds available to meet eligible applications was therefore more marked than in previous years.

Selection criteria and characteristics of applications

As in the previous year, the Guidelines for 1981 included five levels of priority:

1. First priority

Operations for persons with inadequate skill levels, training operations, recruitment operations where jobs were created, and resettlement operations following recruitment decided in advance by employers, for the benefit of workers in Greenland, the French overseas departments, Ireland, Northern Ireland, the Mezzogiorno and Greece. Training operations for unemployed workers were to be linked to labour market requirements.

¹OJ No L 28, 4.2.1971, p. 15; OJ No L 337, 27.12.1971, p. 8.

2. Second level priority

Resettlement operations following recruitment decided in advance by employers; training operations for unemployed workers or workers threatened with unemployment. These operations were carried out in connection with recruitment decided in advance by employers or aimed at maintaining employment.

The operations were for the benefit of workers in regions and areas eligible for assistance from the European Regional Development Fund (ERDF) and affected by serious industrial restructuring or conversion problems with regard to which Community policies have been adopted.

3. Third level priority

Operations identical to those classified as second level priority, for the benefit of workers in other regions and areas eligible for assistance from the European Regional Development Fund.

4. Fourth level priority

Operations to provide training in basic skills, training schemes or recruitment programmes involving job creation, for the benefit of workers unemployed for more than 6 months; recruitment programmes involving job creation for the benefit of unemployed workers recruited by firms employing fewer than 25 people. These operations were for the benefit of workers in the regions and areas referred to under (2) and (3) above.

5. Fifth level priority

Other training operations for workers either unemployed or threatened with unemployment, and recruitment programmes involving job creation, for the benefit of workers in regions and areas referred to under (2) and (3).

Of the 466 million ECU available, it has been possible to commit only 434 million ECU, a figure which takes account of the late notification of refunds.

As in 1980, all the applications classified under the first four priorities were funded in full. However, only 12.7% of those classified as fifth level priority were funded, as against 34% in 1980.

First priority was accorded to applications relating to measures carried out in the six regions referred to.

The volume of applications classified at this level rose in 1981 to 300 million ECU as against 228 million ECU in the previous year, i.e. an increase of 31.6%. Consequently, the share of commitment appropriations allocated to these six regions in relation to the total available under this heading in 1981 represented 69% of those appropriations as against 52% in 1980, 64% in 1979 and 62% in 1978. The fact that Greece has now been added to the five other regions does not explain the sharp increase in first priority applications since, excluding Greece, the share of the five regions stood at 66% of total aid available under this heading. This growth has been continuous since 1978 and corresponds, in national currency, to nominal annual increases of: Greenland, 30%; Mezzogiorno, 25.7%; Ireland, 21.4%; the French Overseas Departments, 17% and Northern Ireland, 2.1%.

Thus, the first priority regions have for years been receiving sizeable sums of aid corresponding to 40% of the appropriations available for the entire Fund, although they accounted for only 8% of the Community's working population. The Commission attaches very great importance to the concentration of aid in those regions. It now has to hand a study - on which consultations were begun in 1981 - showing the impact of this aid.

Of the operations financed, two merit special attention:

- one, carried out in Greenland, was a training scheme for Greenlanders designed to give them access to jobs so far held by Danish staff in view of the latter's qualifications;
- the other, carried out in Greece, was aimed at giving about 70,000 persons a brief period of instruction involving elements of vocational training and adult education.

Second level priority was granted in the main to operations carried out in France and the United Kingdom and aimed at helping toward the conversion of the steel industry. The training programme carried out in Lorraine, for example, was designed to assist the conversion of subcontracting firms to the field of electrical equipment repair. The sum granted in respect of these operations amounted to 1.2 million ECU as against 7.49 million ECU in 1980.

Applications classified as third level priority concerned training operations with guaranteed jobs for the successful trainees, carried out in the other ERDF regions¹.

Measures satisfying this requirement received assistance amounting to 64.4 million ECU, i.e. 36% less than in 1980. This drop is due to the fact that a considerable number of applications initially classified at this level of priority were found, once the documentation had been studied, not to provide the job guarantees required; hence, they had to be re-classified as fifth level priority.

¹
i.e. the "DATAR" areas of metropolitan France, the "Assisted Areas" of England, Wales and Scotland, the "depressed or mountain areas" of North or Central Italy, the "Gebiete der Gemeinschaftsaufgabe" of the Federal Republic of Germany, the districts in receipt of regional aid in Belgium, the assisted regions in the Netherlands, the "Afraensning af egnsudviklingsområderne" in the case of Denmark.

It should be remembered that the application of the Guidelines as regards guaranteed re-employment requires an undertaking on the part of employers to recruit a number of workers at least equal to the number of trainees involved, which must be given in advance of the operation. It is worth comparing and contrasting operations accorded first level priority with those classified as third level.

In the first case, the Fund makes an overall contribution to the development of the six first priority regions; in the second case, it provides aid in the other ERDF regions for the execution of selected non-continuous operations intended either to create new avenues of development or to link vocational training more closely with job creation measures. These operations were conducted in a variety of sectors characteristic, in most cases, of the main lines of economic development of the regions concerned. The two forms of aid complement each other: they were made possible in 1981 only by adopting a rigorous approach to the management of the operations.

The programmes classified as fourth priority accounted for a total of 27.7 million ECU, i.e. a fall of 16% as against 1980. However, this decline was by no means uniform; from year to year, operations present very different features.

Operations aimed at providing basic skills amounted in 1981 to 12.8 m ECU as against 31.4 m ECU in 1980. They chiefly concerned Germany, Belgium, France and the United Kingdom.

Attention should be drawn to the operations carried out in Belgium in the declining regions of Liège and Charleroi and, in the United Kingdom, in the Merseyside region. The provision of training in basic skills is proving to be a form of aid which is particularly well suited to the problems occurring in the older centres of employment as a result of industrial conversion measures.

Operations concerning wage subsidies (Aid E) showed a marked and continuous decline. In 1981 they accounted for only 3.9 million ECU against 15.3 million ECU in 1980 and 26 million ECU in 1979. This fall, which mainly affected the United Kingdom, is explained by the ending of wage subsidies to small and medium-sized undertakings, which now receive only a modest amount of assistance from local authorities.

It should be pointed out, however, that an additional sum of 3.3 million ECU in aid to wage costs was granted in respect of first priority regions, mainly to Italy.

With regard to operations concerning workers who have been unemployed for more than six months, these concerned only Germany in 1981. Approvals relating to such programmes totalled 6.3 million ECU. Mention should be made of a programme carried out in Berlin for the benefit of young people who had been unemployed for more than six months, oriented towards communal work, notably through a cooperative engaged in renovating public or private buildings.

Improvement of local training structures

The Guidelines for 1981 provided for "assistance (to be) provided (in exceptional cases and for a maximum of three years) towards operations aimed at improving the effectiveness of local training structures".

Projects submitted on this basis received assistance amounting to 4.6 million ECU for the continuation of programmes already under way, mainly in the paramedical sector in Italy and for training/local development operations carried out in rural and industrial regions in France (Languedoc-Roussillon-St. Etienne).

Action in this area, which goes beyond the traditional idea of training, seems to be an avenue worth exploring, given the present job market crisis.

Within this framework, the object of training is to stimulate the inhabitants of an area to devise and organise projects aimed at launching new economic activities or develop existing activities. This type of "training/development" scheme, by mobilising local activities, results in the creation of new jobs.

The volume of applications classified as fifth priority amounted to 257 million ECU as against 203 in 1980. Appropriations available amounted to only 33 million ECU instead of 69 million in 1980.

Hence, the weighted reduction had much more severe effects than in previous years. In agreement with the Member States, this reduction was often applied to major national programmes; however, special treatment was accorded to regional programmes with the aim of sparing small-scale public or private bodies the consequences of a cut-off in Fund commitment during the year while programmes submitted were already in progress.

Beneficiaries: It is estimated that 500,000 people will benefit from programmes approved in 1981.

Special measures for the Mediterranean regions

Under the Mandate of 30 May 1980, the Commission laid down the lines of action for programmes in aid of the Mediterranean regions.

It is worth pointing out that many operations which benefit from the Fund are part of this development, both in south-western France and the Mezzogiorno. Examples include the major effort being made in the foodstuffs, fisheries, refrigeration, aquaculture and biological restocking sectors, and combined activities in rural areas geared to the creation of jobs or additional jobs in the tourist and craft industries. Finally, in the context of the development of new sources of energy (solar, geothermal, biomass) and microelectronics technology, the Fund has participated in many training operations for the benefit of small and medium-sized undertakings in these regions.

Applications presenting special problems

Applications from the Greek Ministry of Education

The Ministry of Education is organising courses throughout Greece lasting on average 120 hours and covering various trades (building and construction, timber work, etc.) and activities (dressmaking, weaving, embroidery, ceramics, etc.). This is a major operation since 14,000 persons are following these courses in Athens and Thessaloniki and 56,000 in the rest of the country. These courses fall partly within the field of vocational training (long training for a skilled trade) and are partly oriented towards leisure, free time or life enrichment (short courses).

The problem raised was whether, in view of Greece's economic and social situation, this programme, which, the Ministry maintained,

met recognised needs in rural areas and could be developed into a series of skilled or basic training courses, could be wholly financed by the Fund.

With the aim of encouraging Greece's gradual adjustment to the Fund's priorities, the entire programme, with the exception of the training courses geared towards leisure activities, was classified as first priority for 1981.

Aid to promote better conditions of employment (Aid E)¹

The object of wage cost subsidies is to cover expenditure on allowances paid by firms to newly-recruited workers for a maximum of six months, representing 30% of the gross average wage paid by the firm in question for corresponding jobs.

The question arose as to whether the ceiling of 30% applies to ESF assistance or whether, since Fund assistance is limited to 50% or 55% of eligible expenditure, the proportion payable by the Fund should be limited to 15% or 16,5% of the related wages.

Although, from the legal viewpoint, a broad interpretation of the legislative text is possible, hitherto the level of intervention has always been 15% and the ESF Committee held that this rate should be maintained.

¹Council Regulation (EEC) No 2396/71 of 8 November 1971, as amended by Regulation (EEC) No 2893/77.

OJ No L 249, 10.11.1971, p. 54; OJ No L 337, 27.12.1971, p. 1.

7. Technical progress

Volume of applications and commitment appropriations available

The volume of applications for assistance submitted in respect of this field of intervention, in accordance with Article 5(1)(b) of Council Decision 71/66/EEC¹, as amended by Decision 77/801/EEC², was 55.47 million ECU as against 26.72 in the previous year.

The fact that this volume has more than doubled was undoubtedly a result of the deepening of the crisis which, for several years, the Community as a whole has been experiencing. Workers found their jobs increasingly threatened, while competition forced firms to modernise their methods of production management and to seek ways of squeezing energy costs to a minimum.

The budgetary allocation for this area was 25 million ECU, to which were added 2.5 million in carryovers from 1980 and 2.5 million in refunds. Appropriations available finally came to 30.5 million ECU.

This was the first time that a separate budget had been allocated to the "technical progress" field.

Selection criteria and characteristics of applications

Although four levels of priority had been recognised in previous years, in 1981 the Commission decided to establish only two:

A. - first priority was accorded to:

- operations which contributed towards safeguarding employment in sectors of economic activity in which the introduction of new technologies or production techniques jeopardized employment levels (threat of unemployment);

¹OJ No L 28, 4.2.1971, p. 15.

²OJ No L 337, 27.12.1977, p. 8.

- operations implemented to encourage the modernisation of production and management techniques in small and medium-sized undertakings;

B. - second level priority was reserved for:

- operations designed to apply, for the first time in a Member State, a new technology capable of benefitting an entire sector;
- operations implemented in expanding branches of economic activity, where the introduction of new technologies or production techniques leads to the creation of new jobs, in so far as the skills in demand were innovative and there is such a shortage of labour that the development of new technology was liable to be jeopardised.

Operations referred to above could be designed to retrain workers or keep them in the same occupation (training in new skills), but in either case they should not involve simple routine adaptation measures (in particular, training courses had to last at least 200 hours for those who are unemployed, threatened with unemployment or underemployed).

Technical progress was assessed on relative terms depending on the siting and size of the firms concerned.

First priority applications relating to sectors of economic activity in which the introduction of new technologies jeopardised job levels were submitted mainly by Germany and the United Kingdom and, to a markedly lesser extent, by France, Italy and Greece.

They concerned the printing industry, graphic arts, watch- and clock-making, telecommunications and the aerospace industry.

Most of the operations to encourage modernisation of production and management in small and medium-sized undertakings were carried out in Italy and, to a lesser extent, Belgium and France.

Applications classified as first priority amounted to 29.5 million ECU, and they were financed in full.

Of applications classified as second level priority, only Italy submitted projects concerning the initial implementation of new technologies in the sectors of solar energy, renewable forms of energy, special steels, micro-electronics, telematics and robotics.

Operations in expanding sectors of activity were carried out in Germany in the area of protection against radioactivity and isotope technology; in France, mainly in the nuclear, microwave and high frequency sectors, and in the data processing, electronics, computerised office systems and energy saving sectors; in Italy, in particular in the engines, automation and data processing sectors.

Applications classified as second level priority amounted to 14,700,000 ECU. The weighted reduction method had to be applied - for the first time in this field - in line with the appropriations remaining available, i.e. 674,266 ECU, bringing the amount approved to 5% of the total sum relating to these operations.

In all, assistance granted in 1981 for "technical progress" therefore amounted to 33 million ECU.

Beneficiaries

Allowing for the weighted reduction, the number of persons benefiting from Fund aid was estimated at 23,997.

8. Groups of firms

Volume of applications and commitment appropriations

The volume of applications for assistance submitted in respect of this field of intervention, in accordance with Article 5(1)(c) of Council Decision 71/66/EEC¹, as amended by Council Decision 77/801/EEC², amounted to 19.8 million ECU as against 2.65 the previous year, i.e. almost a tenfold increase.

This striking increase in volume is undoubtedly a result of the efforts made in the Member States, confronted by the magnitude of the economic crisis, to develop new technologies in industry.

For the first time in 1981, this field of intervention received a separate budgetary allocation. This amounted to 8 million ECU, supplemented by 0.4 million in refunds.

Selection criteria and characteristics of applications

The selection criteria laid down were partly amended in relation to the 1980 criteria. Two categories of operation were accorded priority status, namely:

- (a) those aimed at solving employment problems in sectors affected by serious industrial restructuring or conversion problems, with regard to which Community policies had been adopted;
- (b) those aimed at assisting the mobility of workers in other sectors, who are affected by large-scale redundancies and for whom stable re-employment is assured in an expanding field of activity.

Of the priority applications, 10% were from Denmark, 85% from Italy and 5% from the United Kingdom.

¹OJ No L 28, 4.2.1971, p. 15.

²OJ No L 337, 27.12.1977, p. 8.

Only the Italian programmes corresponded to category (a) above and concerned the steel industry and shipbuilding.

The other programmes fell within the scope of category (b) and concerned the training of workers with the aim of securing their re-employment in other sectors, mainly electronics, electrical engineering, numerical control, precision engineering and computer aids to management.

An application by the United Kingdom concerned the transfer of 300 dockers from the old Port of London to the new docks at Tilbury which are equipped to handle containers.

Since the volume of priority applications came to 12.7 million ECU, a weighted reduction of 4 million ECU (or 31%) had to be applied to this sum, thereby bringing the total amount approved into line with the appropriations available, i.e. 8.4 million ECU.

Assistance granted in respect of priority operations amounted to 7.7 million ECU in Italy, 0.4 million ECU in the United Kingdom, 0.3 million in Denmark, i.e. 85%, 5% and 10% respectively of the volume of priority applications.

The remainder of the applications, totalling 7.1 million ECU, could not be met.

Beneficiaries

Allowing for the weighted reduction, 6,029 persons should benefit from operations in this field.

Applications presenting special problems

Since the port installations of a large city had been relocated, the Member State concerned requested that the Fund should bear the cost of expenditure incurred in respect of aid to geographical mobility for the dockers. The employer pays them a resettlement allowance and reimburses the costs of daily travel for a maximum of eight months.

The problem raised was whether the allowances paid could be financed by the Fund under the "resettlement" heading, since the change of residence had not yet taken place.

The European Social Fund Committee, consulted on this matter, held that the Fund could finance the allowances in question, adducing the following arguments:

- changes of residence usually encounter resistance on the part of workers for material and psychological reasons;
- the purpose of the allowances paid is to encourage such transfers and these can only be carried out gradually;
- the relevant Fund Regulation stipulates that the purpose of resettlement aid is to "facilitate the transfer of persons, who are obliged to change their place of residence in order to pursue an occupation", but does not require such transfer actually to have taken place when the assistance is granted.

The Commission approved the application.

9. The Handicapped

Volume of applications and commitment appropriations

The volume of applications for assistance concerning the integration or re-integration of the disabled into working life under Article 5(1)(d) of Council Decision 71/66/EEC¹, as amended by Decision 77/801/EEC², amounted to 154 million ECU in 1981 compared with 127 in 1980 - a 22% increase on the previous year.

Year after year the increase in the number of applications testifies to the concern felt by the Member States and the responsible bodies for one of the most disadvantaged categories of people in the Community.

At the same time, ever-greater budgetary resources have been made available to this field of intervention. In 1981, 90 million ECU were allocated to this sector, to which were added another 3.8 million derived from refunds, thus bringing the total to 93.8 million.

This sum is 20% greater than the 1980 appropriation of 78 million ECU.

¹OJ No L 28, 4.2.1971, p. 15.

²OJ No L 337, 27.12.1977, p. 8.

Selection criteria and general characteristics of applications

As in 1980 the Commission established two levels of priority for this field of intervention.

A. First level priority was accorded to:

- demonstration actions related to employment and innovative in character;
- programmes for the integration of the handicapped into open employment in Greenland, the French Overseas Department, Northern Ireland, the Mezzogiorno and Greece.

B. Second level priority was accorded to:

- vocational training or rehabilitation operations, adaptation of jobs, work places or equipment and the recruitment of handicapped persons in the open economy.

As in the past, most applications were received from public authorities responsible for the occupational integration of handicapped people.

Several private bodies also submitted programmes which, although limited in scope for lack of adequate resources, were far from lacking in interest on account of their innovative approach and the impact they could have on the rehabilitation of the persons concerned.

Eleven demonstration projects were awarded first level priority. They were submitted by Denmark, France, Italy and the United Kingdom.

Two operations submitted by France were carried out by private bodies.

One of these projects concerned for the first time continuous training. The tuition given included general basic courses for persons who have been totally or partially deprived of such training with the idea of giving them the independence essential for practical living. Other courses encouraged the development of creativity and facilitated access to various occupations. This project served as an example in terms of quantity and quality.

The other project applied teaching methods with a view to pinpointing the human and occupational potential of handicapped persons wishing to enter working life or who were in need of retraining in the immediate future.

The six applications presented by Italy were also of interest as regards their novel approach. Operations related respectively to the training of handicapped people in a normal environment and experiments in their direct participation in industry; the long-term teaching of severely handicapped people; assisted training at the work place; modular training and lastly vocational training and the integration of civilian disabled in economic activities.

Attention should also be drawn to two programmes submitted by the United Kingdom.

One experimented with a teaching method especially adapted to young handicapped people intellectually ill-prepared for employment in the open economy, to help them overcome their difficulties.

The other focused on courses for handicapped people with a higher intelligence quotient than the average mentally handicapped person. The aim of the experiment was to give the persons concerned a different type of training, closer to the actual conditions of working life.

In view of the effort to overcome the severe difficulties encountered by handicapped people both these operations deserve to be encouraged.

Lastly, attention should be drawn to the efforts made by Denmark, which carried out an experiment involving the direct integration of handicapped people in firms located far away from areas with special centres. This action demonstrates the desire to overcome the misgivings of the local population.

The applications relating to schemes of an experimental nature listed above totalled 7.1 million ECU. It should be stressed that many of them would not have been put into effect without Fund assistance.

Most of the applications classified as first priority related to programmes carried out in the six absolute priority regions.

These programmes included many of the demonstration projects referred to above as well as to other operations eligible for assistance from the Fund in this area of intervention.

As in the past, it was found possible to finance in full all first priority applications under this heading, for a total of 36.3 million ECU.

Second level priority was accorded to vocational training and rehabilitation operations that were not innovative in approach and did not take place in first priority regions.

These programmes, amounting to 113.2 million ECU, could only be approved in part; a weighted reduction of about 50% therefore had to be applied to the total volume applications classified at this level.

In 1980, application of Article 9(2) of Council Decision 71/66/EEC¹ as amended by Decision 77/801/EEC² had confined Fund financing to operations taking place in ERDF regions.

However, as stated on p. 15 of this Report, there was much greater room for manoeuvre in 1981 as regards resources available for programmes outside Regional Fund territory, which obviated the need to reject applications for financing.

¹OJ No L 28, 4.2.1971, p. 15.

²OJ No L 337, 27.12.1977, p. 8.

Beneficiaries

Operations approved in 1981 should make it possible substantially to improve the situation of 55,280 handicapped persons in working life.

Seminar on handicapped people

Lastly, with a view to making the most of Fund intervention, in October 1981 the Commission organised a seminar in Mulhouse, France on the occasion of the International Year for the Disabled.

The aim of the seminar was to carry out a joint assessment of the results of demonstration projects previously financed by the Social Fund in the Member States.

Views were exchanged on the aims, methods, means and results of each operation.

A summary report of the discussions of the seminar was prepared and will be forwarded to all the authorities concerned in 1982.

The conclusions of the seminar should assist the Commission and the Member States to define their policies as regards the vocational rehabilitation of handicapped people as well as serving as a guide for responsible bodies regarding the most appropriate rehabilitation methods to be applied.

V. PILOT SCHEMES AND PREPARATORY STUDIES

1. Interest in this field has been growing for some years now and 1981 saw the volume of applications (4.56 million ECU) exceed the appropriations available (3.54 million ECU) for the first time. Some of the applications received in 1981 and accorded priority classification were therefore put before the Social Fund Committee in July 1981 as possible candidates for assistance from the 1982 budget.
2. A small proportion of the funds available were set aside to finance the Commission's efforts to devise a method of evaluating training programmes financed by the Fund as contributions towards the development of local economic potential.
3. Annex XVIII gives a list of preparatory studies and pilot schemes, broken down by field of intervention and indicating the nature of the study or schemes, the name of the promoter and the amount approved.

The basic aspects of the studies and pilot schemes approved in 1981 may be summarised as follows:

- (a) in the migrants field, an experimental scheme was aimed at training group leaders to work on the establishment of new activities designed to help migrant workers to return to their home country;
- (b) The two main aims of schemes for young people were: to train young unemployed people either to create jobs for themselves or to manage small businesses; to train specialised technicians in trades with good job prospects.
- (c) As regards women, a scheme involved the application of techniques used in other sectors to the training of adult women in rural areas with a view to specialised independent jobs in agriculture.

- (d) In the regions field, three schemes were aimed at contributing to the development of backward areas via the training of local development officers, the training of unemployed adults with a view to helping them find jobs in an assisted area and the training of shopkeepers in modern management techniques designed to prevent closure of their businesses, likewise in an assisted area.

- (e) In the field of technical progress, one scheme involved a training programme to assist firms in adapting to new technologies, a second related to the training of unemployed mature engineers in computer-aided design and manufacture technology, whilst a third entailed the training of operators as instructors for new entrants to the data-processing profession.

- (f) A further two schemes were approved in this field - one relating to the training of highly qualified maintenance technicians and the other to the training of supervisory staff for the meat industries.

- (g) Four projects were approved in the field of small and medium-sized firms. Two involved training in management techniques for the heads or managers of firms, whilst the other two involved training with a view to the creation or management of non-traditional small businesses.

- (h) Finally, in recognition of the International Year of the Disabled, the Commission accorded priority approval to one preparatory study and six pilot schemes for the handicapped. The study entailed a review of vocational training activities for handicapped adult workers in specialised centres in France in 1980.

The goals of the pilot schemes were as follows: to train staff whose role would be to promote greater stability of employment for the mentally handicapped; to train advisory staff with a view to eliminating barriers to the employment of handicapped people in firms; to test specific possibilities for the employment of handicapped people using telematics; to test a guidance and help service aimed at facilitating the integration into open employment of handicapped people requiring long-term assistance.

VI. REGIONAL IMPACT OF THE SOCIAL FUND

As specified in Chapter IV.6 Social Fund assistance approved in 1981 for programmes in regions eligible for assistance from the European Regional Development Fund amounted to 434 million ECU. With the addition of approvals in other fields of intervention, total Social Fund assistance for these regions amounted to 873.98 million ECU in 1981. Of this amount 434.57 million ECU, or 43.5% of Fund commitments were allocated to operations in the absolute priority regions.

A breakdown by field of intervention for each of the six absolute priority regions is given in Annex VIII.1.

These regions - listed in Council Regulations (EEC) Nos 2895/77 of 20.12.1977 and (EEC) 1989/81 of 13.7.1981¹ - are in a special position compared with the other ERDF regions. First priority is accorded to operations to be carried out in these regions regardless of category, in accordance with the guidelines on certain fields of intervention (in particular "regions" and "young people").

This demonstrates the importance - reflected in both rules and management procedures - ascribed by the Fund to the problems of these regions. The following table shows the amounts approved for these regions each year.

Financial year	Total approvals	% change	Total approvals for absolute priority regions	% change
1979	774.45	-	299.10	-
1980	1,014.93	+31.05	335.15	+12.05
1981	996.17	- 1.84	434.57	+29.66

¹

The list is drawn up pursuant to Article 8(3) of Decision 71/66/EEC which establishes the principle of a higher rate of intervention for these regions. The following regions were listed in 1981: Greenland, French Overseas Departments, Ireland, Northern Ireland, the Mezzogiorno and Greece.

An effort was made in 1981 to redress the situation of these regions, which had deteriorated in relation to the others. Accordingly, commitments entered into for these regions rose by nearly 30% compared with the previous financial year. In 1980, however, the increase in appropriations was out of step with the increase in total commitments (about 12% against 31%).

The increase in appropriations committed in absolute priority regions actually corresponded to an overall cut in real terms in 1980 if account is taken of the increase in prices, which is traditionally higher in these regions than elsewhere.

It is worth noting that this decline had been largely due to a fall-off in applications for assistance. This was true in particular of applications for the Mezzogiorno and Greenland in 1980.

The average per capita aid in the six absolute priority regions decreased from 42 ECU in 1980 to 37 ECU in 1981 (Table II). This reduction results from the inclusion of Greece in the list of absolute priority regions.

Detailed information on the other regions

The fact that Social Fund assistance is mainly allocated to very large-scale programmes makes it difficult to compile detailed information regarding the impact on individual regions (apart from absolute priority regions). It is difficult to break down the statistics by region in these cases.

The Commission has decided to rectify this state of affairs and is gradually introducing a computerised system of regional information for all Community funds. Preliminary work begun in 1981 is under way.

ASSISTANCE APPROVED, 1981

VII. EUROPEAN SOCIAL FUND COMMITTEE

In the course of 1981, as in previous years, the European Social Fund Committee, an advisory body made up of representatives of governments, trade unions and employers set up by the Treaty, continued to give valuable assistance to the Commission.

The Committee met in plenary session three times in 1981 to consider:

- two sets of applications for assistance from the Fund;
- draft guidelines drawn up by the Commission for the management of the European Social Fund for the period 1982-1984;
- draft budget for 1982.
