for Agriculture and Rural Development

RURAL DEVELOPMENT
IN THE EUROPEAN UNION
STATISTICAL AND ECONOMIC INFORMATION
REPORT 2009

December 2009

FOREWORD

Each year the Commission publishes an Agricultural Annual Report on the agricultural situation in the European Union. A large part of the report is devoted to statistical information on Community agriculture. This is drawn up on the basis of information from Eurostat and data collected by the Directorate-General for Agriculture and Rural Development.

Directorate-General for Agriculture and Rural Development also devotes a special annual publication "Agriculture in the European Union - Statistical and economic information", separate from the Agricultural Annual Report, to a wide range of subjects, including the economic situation in agriculture, structures, trade, markets, financial aspects and rural development.

With the evolution of the Common Agricultural Policy, rural development gained in importance and information needs have also evolved. For this reason, DG Agriculture and Rural Development now prepares an annual specific report aiming to provide, on a regular basis, a comprehensive set of information on rural areas and the implementation of the EU's rural development policy.

Most of the information presented in this report can be found in existing databases and reports (Eurostat databases, European Environmental Agency databases and reports, DG AGRI statistical, monitoring and financial reports). These remain the reference source for the relevant data.

TABLE OF CONTENTS

CHAPTER 1 – INTRODUCTION	1
Policy context	1
Data sources and issues	1
1.2.1. Limited data availability	2
1.2.2. The definition of "rural" areas	2
1.2.3. The various financial instruments funding EU rural development policy from 2000 to 2013	4
CHAPTER 2 SITUATION AND PERSPECTIVE	7
SECTION 2.1 SITUATION	9
2.1.1. Importance of rural areas	9
2.1.2. Socio-economic situation in rural areas	9
2.1.3. Sectoral economic indicators	10
2.1.4. Agriculture	11
2.1.5. Food industry	12
2.1.6. Forestry	12
2.1.7. Environment	13
2.1.8. Diversification and quality of life in rural areas	14
SECTION 2.2 OVERVIEW OF THE EU RURAL DEVELOPMENT POLICY	17
2.2.1. Overview of the RD policy framework for the 2007-2013 programming period	17
2.2.2. Overview of the financial aspects of rural development policy and the programming	18
2.2.3. Financial structure of programming	22
2.2.3.1. <i>Technical assistance</i>	22
2.2.3.2. <i>The Leader axis and its contribution to the three core objectives</i>	22
2.2.3.3. <i>Relative importance of the three main axes</i>	23
2.2.4. Main Rural Development instruments	24
2.2.4.1. <i>At EU level</i>	26
2.2.4.2. <i>At measure level per Member State</i>	29
2.2.5. Overview of EAFRD financial implementation	31
2.2.5.1. <i>General overview</i>	31
2.2.5.2. <i>Overview at axis and measure level</i>	32
2.2.6. General overview of pre-accession programmes	35
2.2.6.1. <i>SAPARD in Croatia</i>	35
2.2.6.2. <i>IPARD</i>	39

CHAPTER 3 STATISTICAL DESCRIPTION	43
Chapter 3 – CONTENTS	44
Foreword	45
Correspondence table between the NUTS levels and the national administrative units	52
Correspondence table between the country codes and the country names	53
SECTION 3.1 IMPORTANCE OF RURAL AREAS	55
3.1.1 Designation of rural areas	
3.1.2.1 Importance of rural areas - % territory in rural areas	
3.1.2.2 Importance of rural areas - % population in rural areas	
3.1.2.3 Importance of rural areas - % GVA in rural areas	
3.1.2.4 Importance of rural areas - % employment in rural areas	
SECTION 3.2 SOCIO-ECONOMIC SITUATION IN RURAL AREAS	61
3.2.1 Population density	
3.2.2 Age structure	
3.2.3 Economic development	
3.2.4 Structure of the Economy	
3.2.5 Structure of Employment	
3.2.6 Employment rate	
3.2.7 Unemployment	
3.2.8 Long-term unemployment	
SECTION 3.3 SECTORAL ECONOMIC INDICATORS	85
3.3.1 Employment development of primary sector	
3.3.2 Economic development of primary sector	
3.3.3 Agricultural land use	
3.3.4.1 Farm structure - Number of farms	
3.3.4.2 Farm structure - Utilized agricultural area	
3.3.4.3 Farm structure - Average area farm size and distribution	
3.3.4.4 Farm structure - Average economic farm size and distribution	
3.3.4.5 Farm structure - Labour Force	
3.3.5 Importance of semi-subsistence farming in NMS	
3.3.6 Training and education in agriculture	
3.3.7 Age structure in agriculture	
3.3.8 Labour productivity in agriculture	
3.3.9 Gross fixed capital formation in agriculture	
3.3.10 Labour productivity in food industry	
3.3.11 Gross fixed capital formation in food industry	
3.3.12 Employment development in food industry	
3.3.13 Economic development of food industry	
3.3.14.1 Forestry structure - Area of forest available for wood supply (FAWS)	
3.3.14.2 Forestry structure - Ownership (% area of FAWS under "eligible" ownership)	
3.3.14.3 Forestry structure - Average size of private holding (FOWL)	
3.3.15 Forest productivity	
3.3.16 Labour productivity in forestry	
3.3.17 Gross fixed capital formation in forestry	

SECTION 3.4 ENVIRONMENT

127

- 3.4.1 Land cover
- 3.4.2 Less Favoured Areas
 - 3.4.3.1 Areas of extensive agriculture - % UAA for extensive arable crops
 - 3.4.3.2 Areas of extensive agriculture - % UAA for extensive grazing
 - 3.4.4.1 Natura 2000 area - % territory under Natura 2000
 - 3.4.4.2 Natura 2000 area - % UAA under Natura 2000
 - 3.4.4.3 Natura 2000 area - % forest area under Natura 2000
- 3.4.5 Biodiversity: Population of farmland birds
- 3.4.6 Biodiversity: High Nature Value farmland areas
- 3.4.7 Biodiversity: Tree species composition
- 3.4.8 Biodiversity: Protected forest
- 3.4.9 Development of forest area

- 3.4.10 Forest ecosystem health
 - 3.4.11 Water quality
 - 3.4.12.1 Water quality: Gross Nutrient Balances - Gross nitrogen balance
 - 3.4.12.2 Water quality: Gross Nutrient Balances - Gross phosphorus balance
 - 3.4.13.1 Water quality: Pollution by nitrates and pesticides - Pollution by nitrates
 - 3.4.14 Water use
 - 3.4.15 Protective forests concerning primarily soil and water
 - 3.4.16 Soil: Areas at risk of soil erosion
 - 3.4.17 Soil: Organic farming
 - 3.4.18.1 Climate change: Production of renewable energy from agriculture
 - 3.4.18.2 Climate change: Production of renewable energy from forestry
 - 3.4.19 Climate change: UAA devoted to renewable energy
 - 3.4.20 Climate change: GHG emissions from agriculture

SECTION 3.5 DIVERSIFICATION AND QUALITY OF LIFE IN RURAL AREAS

163

- 3.5.1 Farmers with other gainful activity
- 3.5.2 Employment development of non-agricultural sector
- 3.5.3 Economic development of non-agricultural sector
- 3.5.4 Self-employment development
- 3.5.5 Tourism infrastructure in rural area
- 3.5.6 Internet infrastructure
- 3.5.7 Internet take-up in rural areas
- 3.5.8 Development of services sector
- 3.5.9 Net migration
- 3.5.10 Educational attainment
- 3.5.11 Life-long learning in rural areas
- 3.5.12 Development of Local Action Groups

CHAPTER 1 – INTRODUCTION

Policy context

Rural development policy seeks to establish a coherent and sustainable framework for the future of Europe's rural areas.

In its early days, rural development policy was essentially sectoral (dealing mainly with agricultural structures) with limited territorial aspects.

Agenda 2000 established rural development policy as the second pillar of the EU's Common Agricultural Policy and brought rural development under a single regulation to apply across the whole of the European Union for the period 2000-2006. Besides agricultural restructuring, it addressed environmental concerns and the wider needs of rural areas.

The guiding principles were those of decentralisation of responsibilities - thus strengthening subsidiarity and partnership - and flexibility of programming based on a 'menu' of 22 measures (extended to 26 with the mid-term review of the CAP) to be targeted and implemented according to Member States' specific needs.

As a coherent package of measures it has three main objectives:

- (1) To create a stronger agricultural and forestry sector, the latter recognised for the first time as an integral part of the rural development policy;
- (2) To improve the competitiveness of rural areas;
- (3) To maintain the environment and preserve Europe's rural heritage.

In 2003, the mid-term review of the CAP added new measures to promote quality and animal welfare, and help for farmers to meet new EU standards. It also led to a strengthening of rural development policy via the provision of more EU money for rural development through a reduction in direct payments ('modulation') for bigger farms.

In September 2005, the Council of Ministers adopted a Rural Development regulation for the period 2007-2013. Rural Development will be implemented through one fund, one management and control system and one type of programming. The aims of the policy have been simplified and clarified around three clearly defined economic, environmental and territorial objectives:

- (1) improving the competitiveness of agriculture and forestry;
- (2) improving the environment and the countryside;
- (3) improving the quality of life in rural areas and encouraging diversification of economic activity.

Data sources and issues

Most of the information presented in this report can already be found in various sources and documents (Eurostat databases, European Environmental Agency, DG AGRI statistical and financial reports), but has been compiled in a structured way in a single document.

This report contains in general two types of information:

- (1) statistical and scientific information on the main features of rural areas,
- (2) administrative information on the status of the implementation of Rural Development Policy (physical and financial monitoring of the measures).

In order to ensure the highest relevance of the data to current issues in rural development, priority has been given to the set of common "baseline" indicators which has been proposed in the context of the Common Monitoring and Evaluation Framework (CMEF) for Rural Development Programs 2007-2013¹.

Three important data issues need to be mentioned:

- (1) Weaknesses concerning the data availability,
- (2) The absence of a common fully satisfactory definition of "rural" areas,
- (3) The complexity of reporting the implementation due to the various financial instruments funding EU-27 RD policy.

1.2.1. Limited data availability

- For rural development analysis, there is a need for a detailed geographical breakdown. This is obvious for the environmental aspects but is also necessary for the diversification and the quality of life in local economies. However, it should be stressed that the purpose of the information presented in this report is not to monitor, for example, the specific environmental situation in a particular area or the socio-economic development in a particular village, but rather to assess overall trends and diversity of situations.
- The need for detailed geographical breakdown has a secondary effect on the availability of time series as the delineation of many geographical units has evolved over times (e.g. some regions have been merged or split, or their boundaries have been modified). In this context, the adoption of the NUTS 2006, has had a strong impact on the availability of statistical series - even within a cross-section approach -, and therefore on the quality of the 2009 issue of the report. Notably many series at NUTS-3 level are not anymore available or are very incomplete. Building time series with a detailed geographical breakdown is therefore very resource intensive. Therefore time-development is provided only for a few indicators. However, some of these problems have been solved on this year regarding the previous Rural Development report due to the improvement in the availability of data.
- Baseline indicators of CMEF for rural development 2007-2013 have been developed in an operational context, based largely on data availability (even if sometimes limited). Therefore, the list of selected indicators benefited from existing or ongoing work. Some other indicators have been extracted from the lists of Structural Indicators or Sustainable Development Indicators developed by Eurostat. Agri-environment indicators are largely based on the results of IRENA operation. This project was the basis for the Commission's Communication "Development of agri-environmental indicators for monitoring the integration of environmental concerns into the common agricultural policy"². However, for several indicators related to axis 2, the same information as in the previous report has been used as no update information was available.
- For some of the issues concerned, the data sources are not statistical series but the results of modelling or mapping techniques. Results are therefore closely linked to the methodology applied.

1.2.2. The definition of "rural" areas

Although "rural" areas have been analysed in many countries for decades, there is no single commonly internationally accepted definition. The main reasons are as follows:

¹ http://ec.europa.eu/agriculture/rurdev/eval/index_en.htm

² COM(2006) 508 final In December 2006, the "Agriculture and Fisheries Council" adopted Council conclusions that give a broad mandate to the Commission for continuing the work on the indicators along the lines proposed by Com(2006) 508 final.

- (1) the various perceptions of what is (and what is not) rural and of the elements characterizing "rurality" (natural, economic, cultural, etc),
- (2) the inherent need to have a tailor-made definition according to the "object" analysed or policy concerned,
- (3) the difficulty to collect relevant data at the level of basic geographical units (administrative unit, grid cell, plot, etc).

For statistical reporting, whatever the methodology adopted, the determining factor is the availability of statistics for the selected regional units. For the EU, it implies that the methodology must be able to define the "rural" character of the NUTS regions as most socio-economic data are usually only available at this level.

The Commission has consistently used the OECD methodology, e.g. in the Strategic Guidelines for RDP 2007-2013 and therefore this report defines rural areas using the OECD methodology. However, it should be noticed that the results of this methodology are sometimes considered as imperfectly reflecting the rural character of areas, particularly in densely populated regions³. For this reason, the OECD introduced in 2005 changes in the methodology to take into account the existence of urban centres (see Box 1.1).

Box 1.1: OECD methodology to define rural areas

The OECD methodology is based on population density (OECD, Creating rural indicators for shaping territorial policy, Paris, 1994).

It is based on a two-step approach :

First, local units (e.g. municipalities) are identified as rural if their population density is below 150 inhabitants per square kilometre.

Then, regions (e.g. NUTS 3 or NUTS 2), are classified in one of the 3 categories:

- Predominantly Rural region (PR) : if more than 50% of the population of the region is living in rural communes (with less than 150 inhabitants / km²)
- Intermediate Region (IR) : if 15% to 50% of the population of the region is living in rural local units
- Predominantly Urban region (PU) : if less than 15% of the population of the region is living in rural local units.

Changes introduced in the second step of the methodology (OECD, Regions at the glance, Paris, 2005):

- if there is an urban centre > 200.000 inhabitants (in EU) representing no less than 25% of the regional population in a "predominantly rural" region, it is re-classified as "intermediate"
- if there is an urban centre > 500.000 inhabitants (in EU) representing no less than 25% of the regional population in an "intermediate" region, it is re-classified as "predominantly urban".

An "urban center" in Europe is defined as a local unit LAU2 (e.g. municipality) with a population density above 150 inhabitants per Km² and total population above 200.000 inhabitants.

Characterisation of the rural character at regional level, where most of the statistics are available, allows drawing easily a picture of the different types of areas at national level.

As for the first step, the method requires information on population and areas at local level, the characterisation can only be made with a long periodicity (in general every 10 years when a population census is made).

The OECD methodology is the only definition of rural areas internationally recognised. However, the results of this methodology are sometimes considered as imperfectly reflecting the rural character of areas, particularly in densely populated regions. The methodology is therefore sometimes adapted or replaced by another approach.

³ For this reason, several initiatives have been launched in the European Commission (Eurostat, Joint Research Centre, DG Regional Policy, DG Agriculture and Rural Development) with a view to developing an alternative methodology.

1.2.3. The various financial instruments funding EU rural development policy from 2000 to 2013

Due to the evolution of policy needs concerning rural development and to the enlargement of the European Union, rural development policy has been implemented through different financial instruments (see an overview in Box 1.2).

For the programming period 2000-2006, the system was rather complex, with several financial instruments used for different countries and period or even different measures. In fact, in the rural development programming period 2000-2006 the measures were financed by the EAGGF Guarantee Section or Guidance Section, depending on their regional context. Thus, the EAGGF Guarantee Section covers support for early retirement, less-favoured areas, agri-environment measures and afforestation of farmland. The other rural development measures were financed by the EAGGF Guidance Section in Objective 1 areas and by Guarantee Section in regions not covered by Objective 1. For the period 2000-2006, the Guidance Section of EAGGF was one of the Structural Funds, together with the European Regional Development Fund, the European Social Fund and the Financial Instrument for Fisheries Guidance.

Malta and Cyprus were not eligible for SAPARD, but instead have had access to specific pre-accession funds to help them prepare to implant the *acquis*. From 1 May 2004, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Slovakia and Slovenia became full members of EU. From this date onwards, these countries were not eligible for SAPARD funding (SAPARD continued to operate in Bulgaria and Romania). Among the current Candidate Countries only Croatia has SAPARD for 2006.

In the 2004-2006 period, in the New Member States there were two types of programming and financing of RD measures:

- TRDI (Temporary Rural Development Instrument) financed the four accompanying measures⁴, plus some additional rural development measures which have been introduced specifically to address the particular challenges facing the New Member States⁵ and
- Measures which were integrated in the Objective 1 programming funded by EAGGF Guidance Section.

Considerable simplification has been introduced in the programming period 2007-2013, a single fund named European Agricultural Fund for Rural Development (EAFRD) has been created to finance rural development policy within EU-27⁶. For Candidate Countries (i.e. Croatia, Macedonia and Turkey) a specific "Instrument for Pre-Accession Assistance" (IPA) has been set up with a specific component dedicated to rural development (IPARD)⁷.

This report covers the 2007-2013 programming period and the SAPARD implementation in Croatia. Financial data are from different sources:

- Programming documents (SAPARD, IPARD and EAFRD) – latest versions until 30 September 2009 – on programming and
- Declarations of expenditure until 31 December 2008 – on financial execution of EAFRD.

⁴ Agri-environment, early retirement, afforestation and compensatory payments for LFAs and areas subject to environmental constraints

⁵ Establishment of producer groups, support for semi-subsistence farms undergoing restructuring, complements to direct payments, technical assistance

⁶ Council Regulation (EC) N^o 1290/2005 of 21.6.2005 (OJ L209 of 11.8.2005, p.1).

⁷ Council Regulation (EC) No 1085/2006 of 17.7.2006 (OJ L 210 31.7.2006, p.82).

CHAPTER 2
SITUATION AND PERSPECTIVE

Chapter 2 CONTENTS

Section 2.1 Situation

**Section 2.2 Overview of the EU Rural Development Policy – 2007 - 2013
Programming period**

SECTION 2.1 SITUATION

2.1.1. *Importance of rural areas*

(tables & maps/graphs 3.1.2.1 to 3.1.2.4)

In the EU-27 rural areas (predominantly rural and intermediate regions) represented 90% of the territory and 56% of the population in 2006. The corresponding shares for predominantly rural areas were 54% of the territory and 19% of the population. Rural areas are therefore particularly important in terms of territory. Among the Member States, the importance of rural areas varies from the more "Urban"⁸ ones (BE, NL, MT) to the more "Rural"⁹ ones (IE, SI, FI) along a continuum where Intermediate Regions can play a major role (CY, LU, CZ, EE, SK, BG, LT).

Even if economic activity tends to be concentrated in more urban areas, rural areas generate 43% of the Gross Value Added (GVA) in EU-27 and provide 55% of the employment, these shares being larger in the new Member States (70% and 79% respectively).

2.1.2. *Socio-economic situation in rural areas*

(tables & maps/graphs 3.2.1 to 3.2.8)

In most rural areas, a first characteristic is the low level of concentration of the population: at EU-27 level, population density varies from 41 inhabitants/km² in predominantly rural areas to 561 inhabitants/km² in predominantly urban areas. This range is of course even larger when looking at national or regional levels: at NUTS-3 level, it ranges from 2 inhabitants/km² in Finnish "Lappi" to 20 729 inhabitants/km² in Paris. In most Member States, population density did not evolve significantly in rural areas between 1995 and 2006. On the contrary, important changes occurred in the urban areas of some Member States such as increases of more than 100 inhabitants/km² in Austria and Ireland and decreases of more than 300 inhabitants/km² in Latvia, Hungary and Romania¹⁰.

At EU-27 level, the age structure of the population does not vary significantly between different types of areas. However, the share of population between 15 and 64 years old is always significantly higher in urban areas and the proportion of old people (65 years old and more) is often slightly higher in predominantly rural areas. It seems that age structure is more influenced by differences in demography between Member States. For instance, in rural areas, there is generally a larger proportion of old people in EU-15 whereas there are relatively more young people (less than 15 years old) in the new Member States. Between 2000 and 2007, the share of young people (less than 15 years old) decreased in almost all Member States and all types of areas and more significantly in new Member States and in rural areas where their proportion was generally higher in 2000.

At EU-27 level, the income per habitant is 21% to 62% lower in rural areas and generally increases with a higher urban character¹¹. In the new Member States where the general level of income is less than half of the EU-27 average, the gap between predominantly rural areas and predominantly urban areas is accentuated. However, while the relative income per

⁸ With more than half of the territory and of the population in Predominantly Urban regions.

⁹ With more than half of the territory and of the population in Predominantly Rural regions.

¹⁰ These changes are of course strongly influenced by the delineation of NUTS-3 that may be restricted to urban centres.

¹¹ With the noticeable exception of Estonia. This result is influenced by the statistical measurement as the GDP is evaluated in the place of work and not in the place of residence.

inhabitant in rural areas of the EU¹² remained globally unchanged between "1999" and "2005", it has slightly improved in rural areas of new Member States (for predominantly rural areas, the relative position increasing from 34% to 38% of the EU average and from 41% to 48% for intermediate regions).

The primary sector still represents 9% of the employment and 3% of the value added in rural areas of EU-27¹³. This situation is more marked in the new Member States, with the corresponding shares standing at 17% and 6% respectively. In general, even in rural areas, the majority of the economic activity depends more and more on the service sector. This trend should increase in the coming years as, between 2000 and 2006, the relative importance of the primary sector in the economy of the rural areas in EU-27 decreased by 4.2 percentage points in terms of employment and by 1 percentage points in terms of value added. It has to be mentioned that Bulgaria, Romania and Poland played an important role in the change of employment in primary sector, falling by 21, 16, and 11 percentage points respectively. In EU15, by contrast, this figure decreased by 1 percentage points.

The employment rate is slightly lower in rural areas for EU-27 as a whole (64.8% in predominantly rural areas against 66.5% for all areas in 2007)¹⁴. Development between 2000 and 2007 is different in new and old Member States. In EU-15, employment rate has generally increased more in rural areas than in urban areas, whereas in EU-12, rural areas are revealing lower increase of their employment rate or even a decrease (particularly significant in Romania). At EU-27 level, the unemployment rate (including long-term unemployment) is globally slightly higher in rural areas, but as for the employment rate, this is not observed in all Member States. Between 2000 and 2007, the unemployment rate diminished more in rural areas at EU-27 level, being this decrease higher in EU-12 than in EU-15.

2.1.3. Sectoral economic indicators

(tables & maps/graphs 3.3.1 to 3.3.2)

With around 12.9 mio persons employed in 2006 in EU-27, the primary sector (agriculture, hunting and forestry) represented an important part of the EU economy in terms of employment: 6% for EU-27, ranging from 1% in United-Kingdom to 30% in Romania.

In terms of value-added, the EU-27 primary sector reached around 179.5 bio euros in 2006 and accounted for 1.7% of GDP, ranging from 0.4% in Luxemburg to 8.8% in Romania.

The importance of primary sector in EU-27 is declining. Between 2000 and 2006, its share diminished by 1.2 percentage points in terms of employment and by 0.6 percentage points in terms of value-added. The number of jobs decreased by 1.9 mio persons or -2.2% per year ranging from -9% in Poland and Romania to +4% in Luxemburg. Between 2000 and 2006, the value-added of the primary sector decreased by 9.1 bio euros. It is due to a particularly low production in 2006, with no increase in volume at EU level and average annual changes ranging from -6% in Luxemburg to +7.2% in Slovakia. However, in most new Member States, there has been an increase of the production in volume leading to an average growth rate of 2.9% per year for EU-12.

¹² For the change "1999"- "2005", EU-27 excludes BG and DK due to the lack of data.

¹³ Due to data availability, this indicator is evaluated at NUTS-2 level which only enables to provide a rough delineation of rural areas.

¹⁴ Due to data availability, employment and unemployment are evaluated at NUTS-2 level which only enables to provide a rough delineation of rural areas.

2.1.4. Agriculture

(tables & maps/graphs 3.3.3 to 3.3.9)

In 2007, agriculture utilised 172.5 mio hectares in EU-27 of which 60.5% were dedicated to arable crops, 33% to permanent pastures and 6.4% to permanent crops. As the distribution depends mainly on natural conditions, there are major variations between (and generally within) Member States. Typical examples are the importance of permanent crops (vineyards, olive trees) in dry areas of Mediterranean countries (e.g. EL, CY, IT, PT, ES) or the major share of permanent pastures in mountain or rainy areas (e.g. IE, UK, SI, AT, LU, NL).

There were 13.7 mio farms in EU-27 in 2007, with an average size of 12.6 hectares, varying from 1 hectare in Malta to 89 hectares in Czech Republic. In general, farm sizes are higher than the average in EU-15 (with the exception of EL, IT and PT) and lower in the new Member States (with the exception of CZ, EE and SK).

Variations in structure among regions of the same Member State are in general much lower in new Member States than in old ones, with the largest differences observed in Germany (from 13 ha in Hamburg to 263 ha in Mecklenburg-Vorpommern).

Variations between Member States and regions are even greater when measuring the economic size¹⁵ of farms: on average, the economic size of farms in the new Member States is ten times lower than in EU-15 (the Czech Republic is the only new Member State above the EU-27 average economic size that stands at 11.3 European Size Units)¹⁶.

The total labour force in agriculture represents around 11.7 mio annual work units for EU-27.

The basic feature of agriculture in the EU is family farming with 1 to 1.5 full-time jobs, though there are significant variations between Member States. In southern countries of EU-15 and in most New Member States, there are many holdings with less than 1 full-time job (the minimum being 0.4 in Malta). On the other extreme, in some regions, agriculture production is based on very large agricultural holdings organised in legal entities and mainly based on non-family labour force. It is clearly the case in the Czech Republic but also in Eastern Germany, and in Dutch "Holland", for instance.

Very small farms that could be considered as based on semi-subsistence activities are very important in some Member States, particularly in the New Member States. In several of these, half of the farms have a potential gross value added per year of less than 1 200 euros (i.e. with an economic size of less than 1 European Size Unit)¹⁷.

In 2005, only 20% of farmers in the EU-27 had a basic or full training in agriculture, ranging from less than 1% in Malta to 71% in The Netherlands¹⁸.

At EU-27 level there is approximately 1 farmer of less than 35 years old for each 9 farmers of more than 55 years. In some Member States (Portugal, Bulgaria, Italy, Cyprus, United-Kingdom), the proportion of "young" farmers is very low (less than 1 "young" farmer for every

¹⁵ The economic size is measured by the potential gross value added which takes into account the type of production and the average yields and prices at regional level (European Size Unit).

¹⁶ It should be noticed that, even if the influence of inflation is eliminated, the economic size is measured in euros. Variations between Member States would be attenuated when using another currency unit such as the purchasing power parities which take into account the cost of living.

¹⁷ This information should be used with cautious as it is very sensitive to the definition of a farm and to the threshold of the survey adopted by the Member States. It explains the high proportion of very small farms recorded in UK in the Farm Structure Surveys since 2003 for which the national authorities decided to cover all farms left outside the field of observation in the previous surveys.

¹⁸ Due to data availability, we are just able to provide information from FSS 2005

20 "older" farmers) whereas in some others (Poland, Austria, Germany) there is more than 1 "young" farmer for every 3 "older" farmers.

The labour productivity of farming¹⁹ differs considerably across the EU, particularly between the old and the new Member States. On average, for the period 2005-2007, labour productivity in the EU-15 was around 81% higher than the EU-27 level, whereas it was four times lower in the New Member States. Exceptions are Malta and Cyprus with labour productivity above EU average. The highest labour productivity is observed in The Netherlands and Denmark (more than 3 times the EU-27 average) and the lowest in Latvia, Bulgaria, Romania and Poland (less than 4 times the EU-27 average). However, over the last years (between 1999-2001 and 2005-2007), labour productivity increased more rapidly in the new Member States than in EU-15. Average annual change rate²⁰ in the new Member States varies between -3.4% and 19% and in the old Member States between -6.7% and 7.5%.

Gross Fixed Capital Formation in the EU-27 reached 56 bio euros in 2007, of which 92% took place in the EU-15. The rate of investment, measured by the ratio between the Gross Fixed Capital Formation and the Gross Value Added, was around 37% for the EU-27 but was half in the new Member States than in EU-15 (21.1% and 40.1% respectively). In EU-15, it varied between 15.4% in Spain and 91% in Luxembourg. Among the New Member States, high rates (at least 40%) are observed in Latvia, in Slovenia, in Estonia and in Czech Republic.

2.1.5. Food industry

(tables & maps/graphs 3.3.10 to 3.3.13)

The food industry represents an important part of the EU economy accounting for 5 mio jobs (2.3% of total employment) and 2.1% of total GVA for EU-27 in 2007. It is relatively particularly important in Romania, Ireland, Lithuania, Poland, Bulgaria and Greece. Between 2000 and 2006 this sector developed differently in the various Member States resulting in a slight decrease of employment but a significant increase of gross value added (+1.2% per year at constant prices) at EU-27 level.

In 2006, the rate of investment, measured by the ratio between Gross Fixed Capital Formation and Gross Value Added, was particularly high in Latvia (52%) and Italy (31%).

Labour productivity is difficult to measure in the food industry as there is limited information concerning the labour force, due to the importance of seasonal or part-time employment in this sector. The estimate for EU-27 is around 43 thousands euros per person employed.

2.1.6. Forestry

(tables & maps/graphs 3.3.14 to 3.3.17)

In the EU-27 the forest available for wood supply covers around 117.6 mio ha. Whereas it represents 79.5% of the total forest area for EU-27, the share of productive forest is much lower in Mediterranean countries. Around 60% of this forest belongs to private owners, this part being in general lower in the new Member States. In most Member States, the average size of the forest owned by private owners is low (for instance lower than the average farm size). Forest productivity varies significantly among Member States, from 1 m³/year/ha in Cyprus to 8.8 in Germany (4.7 for EU-27). Due to the relatively low importance of the forestry sector, the economic information is very limited in many Member States.

¹⁹ Measured by the Gross Value Added at basic prices per Annual Work Unit.

²⁰ Measurement at constant prices (in volume).

Based on the available information, estimates for Gross Fixed Capital Formation in the EU forestry sector reached around 1.7 bio euros in 2005, representing around 16% of the GVA of the sector.

Due to the same difficulty as for the food industry, labour productivity is difficult to measure in the forestry sector. The estimate for the EU is around 51.5 thousands euros per person employed in 2005 (only 15 countries have been included).

2.1.7. Environment

(tables & maps/graphs 3.4.1 to 3.4.20)

Agriculture and forestry represent 78% of land use in the EU-27, ranging from 50% in Malta to 95% in Poland. In the Mediterranean countries, the British Islands and Scandinavia, natural areas also cover a large part of the territory. Artificial areas represent a significant part of the territory only in Malta, Belgium and The Netherlands. Agriculture and forestry therefore play a major role for the environment and landscapes in Europe.

A considerable part of the agriculture area is located in regions where conditions are difficult for this activity, for instance in mountains. Extensive farming covers at least 15.8% of area for arable crops and 22.8% of area for grazing animals in EU-27. It is estimated that high nature value farming systems cover more than 20% of agricultural area in most Member States (even more than 30% in some of them²¹).

The implementation of Natura 2000 has represented a significant contribution to the preservation of the biodiversity. The designated sites cover around 10% of agricultural area of the EU-27 and even 15% or more in five Member States.

Natura 2000 sites also cover over 20% of forestry area that also contributes to the biodiversity. This share is even higher than 40% in several Member States.

Over the long term, a decline in the population of farmland birds, largely attributed to intensive farming, is observed in many Member States. However, over the last decade, the situation is rather stable at EU level²².

Defoliation of trees also reveals the strong environmental pressure on the forestry ecosystem (23% of sample trees were affected at EU-27 level in 2007). The development of this phenomenon between 2000 and 2006 varies among Member States, with significant increases in Portugal, France, and Slovenia and steep decreases in Poland and Bulgaria. In 2007, the phenomenon of defoliation was particularly important in the Czech Republic, Bulgaria, Italy and France. However forestry area in EU-27 increased by nearly 500 000 hectares per year between 2000 and 2005, the largest increases having taken place in Spain and Italy.

Even if several human activities influence water quality, agriculture plays an important role for some of its features. Concentration of nitrates in surface water decreased over the last years in most Member States even if significant surpluses of nutrients (+89 kg/ha for Nitrogen and +13 kg/ha for Phosphorus at EU-15 level and much more in some Member States) reveal that farming practices are still too intensive. The pressure from agriculture on water use is also critical in some regions of the European Union as, for instance, the share of irrigated area can be higher than a fifth of the agricultural area in some Member States.

²¹ The concept of High Nature Value Farmland is still under development. In the framework of the evaluation process of RD 2007-2013, a Guidance document is being prepared to help Member States to elaborate the Impact Indicator "Maintenance of high nature value farming and forestry areas".

²² Attention should be given to long-term trends as short-term variations are mainly influenced by weather conditions.

Soil erosion persists in many areas as it is estimated that a soil loss by running water can amount to more than 2 tons/ha/year in some Member States. However, an increasing part of agricultural area is devoted to organic production. For the whole EU-27, organic area was higher than 7.1 mio ha in 2007, i.e. 3.9% of the agricultural area, and is developing rapidly: for the period 2003-2007, the average annual growth rate was around 6% for EU-27 and even reached 20% for the new Member States.

With 462 mio tonnes of CO₂ equivalents, agriculture produced 9.2% of the EU emissions of greenhouse gases in 2007, resulting from an average annual decrease of 1% per year between 2000 and 2007. However, with a production of renewable resources of almost 8 mio tonnes of oil equivalent in 2007 and a corresponding area in 2007 estimated around 4.6 mio ha, EU agriculture also contributes increasingly to the mitigation of climate change²³.

2.1.8. Diversification and quality of life in rural areas

(tables & maps/graphs 3.5.1 to 3.5.12)

The diversification of the economy of rural areas to other sectors than agriculture is progressing:

- 35% of European farmers had another gainful activity than agriculture in 2007, this percentage being even higher than 50% in many countries and regions (particularly in Slovenia, Sweden and Cyprus);
- 82% of employment and 95% of value added in predominantly rural areas of EU-27 came from the non-agricultural sectors, resulting from respective average annual increases of around 1.8% and 2.7% per year between 2000 and 2006.

One of the key opportunities in terms of potential growth for rural areas comes from tourism. Limited information is available on the small size tourism structure that is the main features of rural tourism. However, with 27% of bed places of EU-27 in predominantly rural areas, this sector already plays a major role in most of them, but increases less rapidly than in urban areas.

Due to their rural amenities, rural areas are attractive as a place to live, even if remoteness and peripherality remain a major problem in some of them. However, some aspects of quality of life need to be improved in many rural areas. For instance, broadband internet infrastructure and take-up by population are significantly lower than in urban areas and take-up is often progressing slower.

The development of services is also lower in the rural areas of many Member States: at EU-27 level, services represent 63% of the economic activity in predominantly rural areas in comparison with 76% in predominantly urban areas.

The net migration rate is a good indicator to measure the global attractiveness of an area. It is often lower in predominantly rural areas (+0.23 % for EU-27 in 2005) than in urban areas (+0.46 % for EU-27). It should be noticed that the pattern varies significantly in the different Member States and that this information should obviously be analysed with care as other factors, such as more favourable climatic conditions, can play a major role in the decision of people to go and live in another place.

Human potential is a key factor for the development of rural areas. In 2008, 71% of adults of EU-27 have reached a medium or high education level. There are however large variations among Member States (from 27% to 91%), with notably a higher level of education in most new Member States than in EU-15. In most of the countries the level of education is lower in rural areas than in urban areas and these differences seem to be growing over the last years (2% and 2.5% average annual growth respectively in the period 2005-2008).

²³ Even if this quantity may seem limited in comparison with the 68 mio t of oil equivalent produced by forestry in 2007, with an average annual increase of 4.4% per year between 2000 and 2007.

Life-long learning is a good instrument to improve the skills of workers and favour economic development. It is already largely applied in Denmark and Finland where more than 20% of adults participated in life-long training in 2008. However, it is often less used and progressing slowly in rural areas.

The dynamism of population and their willingness to be actors for their development is also essential. This involvement is successful as LEADER actions cover more than 50% of the EU-15 population of rural areas.

SECTION 2.2 OVERVIEW OF THE EU RURAL DEVELOPMENT POLICY - 2007-2013 PROGRAMMING PERIOD

The Council Regulation (EC) No. 1698/2005 of 20 September 2005 on support for rural development by the European Agricultural Fund for Rural Development (EAFRD) lays down the general rules governing rural development policy for the period 2007 to 2013, as well as the policy measures available to Member States and regions. The Rural Development Programmes that the Member States and regions prepared for the period 2007-2013 are currently under implementation. Therefore this section aims at providing a general overview of the content of the programmes and of the implementation consolidated mainly at Member State level, based on the situation as of 30 September 2009.

2.2.1. Overview of the RD policy framework for the 2007-2013 programming period

Considerable simplification has been introduced in the new programming period 2007-2013 as compared to the previous one. Rural Development is now financed by a single fund: the European Agricultural Fund for Rural Development. The previous 5 types of programming have been reduced to a single one, and there is now a single financial management and control framework instead of three.

As before 2007, every Member State (or region, in cases where powers are delegated to regional level) must set out a rural development programme, which specifies what funding will be spent on which measures in the period 2007 to 2013.

A new feature for 2007 to 2013 is a greater emphasis on coherent strategy for rural development across the EU as a whole. This is being achieved through the use of National Strategy Plans. This strategic approach has been introduced by the EU Strategic Guidelines (adopted by the Council in February 2006²⁴) and should help to:

- Identify the areas where the use of EU support for rural development adds the most value at EU level;
- Make the link with the main EU priorities (for example, those set out under the Lisbon and Goteborg agendas);
- Ensure consistency with other EU policies, in particular those for economic cohesion and the environment;
- Assist the implementation of the new market-oriented Common Agricultural Policy (CAP) and the necessary restructuring. It will entail in the old and new Member States.

Following the purposes of the CAP reform launched in 2003 (to realise an aid system that is independent from production, and to increase the population retention capacity of the rural regions) three major objectives for Rural Development policy have been set for the period 2007-2013:

- Increasing the competitiveness of the agricultural and forestry sector;
- Improving the environment and countryside through support for land management;
- Enhancing the quality of life in rural areas and promoting diversification of economic activities.

The reform integrates the Leader Community Initiative into mainstream RD programmes.

²⁴ Council Decision 2006/144/EC of 20.02.2006

Each of these objectives corresponds to an Axis, while Leader is considered as a methodological axis. The Council Regulation 1698/2005 proposes a set of measures organised by axis, following a hierarchy of objectives.

The measures of **Axis 1** serve the aim of further modernisation of production by encouraging farmers also to structural changes, resulting primarily in quality improvement. Efficiency and competitiveness require that a reasonable balance is found between farm viability, environmental protection, and the social dimension of rural development.

Measures linked to more rational land use and protection of the environment are grouped around **Axis 2**, which aim at ensuring the delivery of environmental services by agri-environment measures in rural areas, and preserving land management. These activities contribute to sustainable rural development by encouraging the main actor to keep up land management so as to preserve and enhance the natural space and landscape. Such measures also help prevent the abandonment of agricultural land use through payments to compensate natural handicaps or handicaps resulting from environmental restrictions. A general condition for measures under Axis 2 is respect of the relevant EU and national mandatory requirements (cross-compliance).

The measures under **Axis 3** are aimed at improving the income-producing possibilities and quality of life of residents of rural areas by encouraging a 'living countryside' and helping maintain and improve the social and economic fabric, in particular in the more remote rural areas facing depopulation.

The **Leader** model is to be continued and consolidated at the EU level by integrating what used to be a Community Initiative in the programming period 2000-2006 as an obligatory element into the rural development programmes to be implemented by the Member States during 2007-2013. Each programme contains a Leader axis to finance the implementation of the local development strategies of Local Action Groups, built on one or more of the three thematic axes, the cooperation projects between them and the capacity building necessary for the preparation of local development strategies and the animation of the territory.

As for the programming process, Member States had first to submit National Strategy Plans (NSP), with the aim of translating the EU priorities agreed in the Community Strategic Guidelines to the member state situation and ensuring complementarity with Cohesion policy. In a second step, Member States or regions had to set up their Rural Development Programmes (RDP) articulating the 4 axes.

To ensure some overall balance in the programme, a minimum funding for each axis is required²⁵: 10% for Axis 1, 25% for Axis 2, 10% for Axis 3 and 5% for Leader axis (for the New Member States a phasing in period is foreseen in such a way that at least 2.5% is reserved for axis 4 over the period). It should be noticed that, as Leader axis is also a delivery mechanism of the measures of the three thematic axes, it may overlap the minimum funding of these axis. As an example, the minimum spending of 5% of Leader axis may partly correspond to the 10% minimum spending of Axis 1.

2.2.2. Overview of the financial aspects of rural development policy and the programming

At the highest level, the funding of Rural Development Policy is based on the **multiannual financial framework** agreed between the European Parliament, Council and Commission in an interinstitutional agreement. The financial framework sets the maximum amount of the EU budget each year for broad policy areas ("headings") and fixes an overall annual ceiling. The current financial framework covers the period 2007-2013.

²⁵ Article 17 of Council Regulation (EC) 1698/2005

At a second level, the annual amount foresees for Rural Development Policy, including the funds transferred from the agricultural market part due to the "modulation-mechanism" is distributed among Member States.

At the third level, based on their annual allocation, Member States have to set up their programmes and the distribution of their funding between axis and measures. Therefore, each rural development programme includes a financing plan, comprising two tables:

- a) a table setting out the total EAFRD contribution planned for each year and
- b) a table setting out for the entire programming period the total Community contribution planned and the matching national public funding for each axis and measure.

As the financial framework foresees a rather regular distribution of the support over the 7 years, the annual breakdown that Member States have to use as a reference is not always appropriate, in particular during the first years where the programmes have to be elaborated, adopted and implemented.

Within the framework of the new Financial Perspectives, rural development was allocated 77.6 billion euros from EAFRD envelope over the period 2007-2013²⁶. In addition, Council Regulation (EC) 378/2007 opens the possibility of a voluntary modulation, i.e. reducing the direct payments and transferring the corresponding funds to increase the financing of RD programs. It concerns Portugal and United-Kingdom.

Table 2.2.1 provides a breakdown by Member State of Community support for rural development from 2007 to 2013. It should be kept in mind that all public funds are not covered in this overview, notably the support provided in the framework of the state aids is not covered.

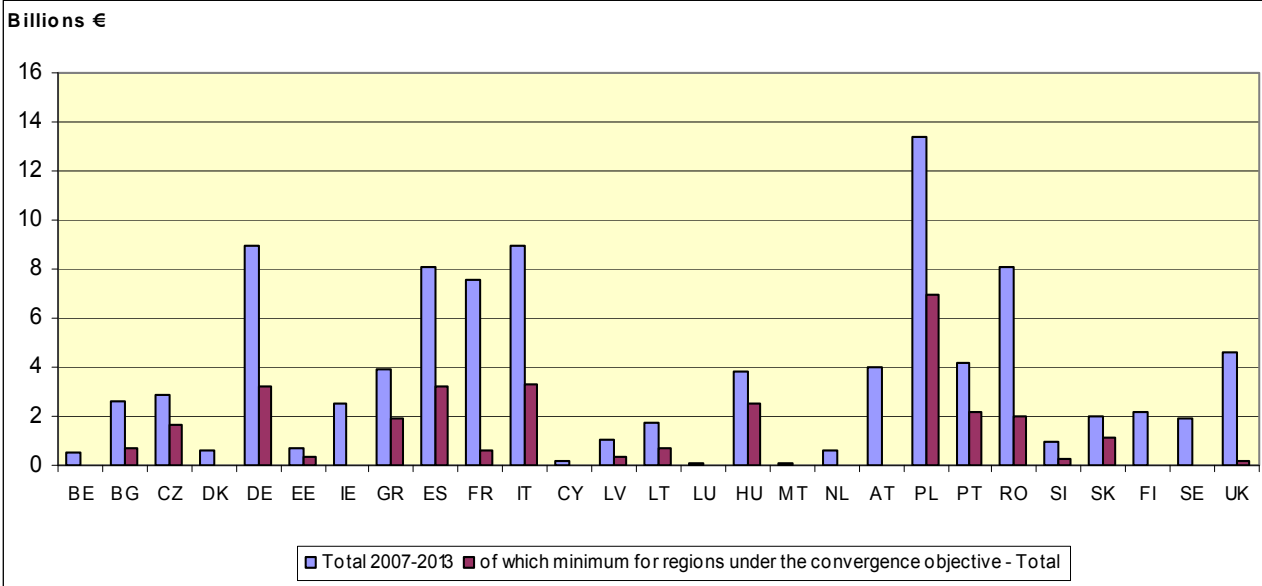

²⁶ 2009/545/EC: Commission Decision of 7 July 2009 fixing the annual breakdown per Member State of the amount referred to in Article 69(2a) of Council Regulation (EC) No 1698/2005 concerning support to rural development and amending Commission Decision 2006/636/EC

Table 2.2.1: Breakdown by Member State of Community support for rural development from 2007 to 2013

Member State	Total 2007-2013	of which minimum for regions under the convergence objective - Total
Belgium	487 484 306	40 744 223
Bulgaria	2 642 248 596	692 192 783

Source: Commission Decision of 7 July 2009 (2009/545/EC)

Graph 2.2.1: Community support for rural development in the 2007-2013 programming period

Graph 2.2.2: Share of EAFRD contribution by Member State in percentage, programming period 2007-2013

The following sections and the annex present an overview of the allocation of funds, limited to EAFRD, between axis and measures based on the situation at 30 September 2009. Due to the different stages of approval of the programme modifications, this may be still subject to changes. Information has been consolidated at Member State level. Last but not least, data presented include voluntary modulation for Member States who chose to apply it (UK & PT).

2.2.3. Financial structure of programming

The structure of programmed expenditure can broadly be described in 5 blocks, corresponding to the 4 axes established in the Regulation and to the technical assistance²⁷.

2.2.3.1. Technical assistance

According to Article 66 of Council Regulation (EC) 1698/2005, there are 2 types of technical assistance, one that is at the initiative of the Commission or on its behalf, and one that is at the initiative of the Member States. In the latter case, the EAFRD may finance preparation, management, monitoring, evaluation information and control activities of programme assistance. Up to 4% of the total amount of each programme may be devoted to these activities. This percentage varies according to Member States, with a majority of the Member States who joined in 2004 and 2007 applying the maximum percentage (Estonia, Latvia, Lithuania, Hungary, Malta), Bulgaria and Romania (3.8%), while France (1.0%), Finland (0.9%), the Netherlands (0.6%), Slovenia (0.5%), Czech Republic (0.5%), the United Kingdom (0.1%) and Ireland (0.1%) dedicate less than 1% of the EAFRD contribution to this action. Luxembourg has no allocation for the Technical assistance measure (0%).

At EU-27 level 2.1% of the total EAFRD contribution is devoted to this activity (1.9% in the EU-15 and 2.3% in EU-12).

Graph 2.2.3: Importance of Technical assistance measure by Member State, programming period 2007-2013

2.2.3.2. The Leader axis and its contribution to the three core objectives

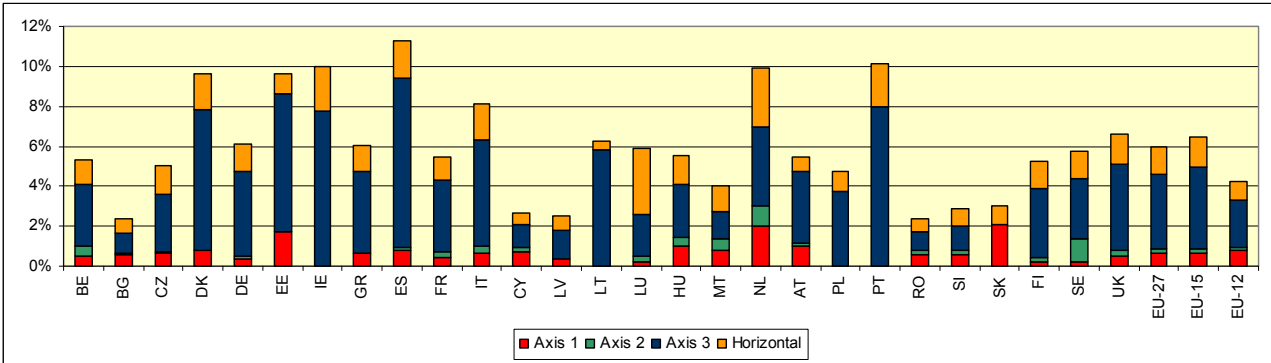

As previously mentioned, at least 5% of the EAFRD total contribution to the programme shall be reserved for Leader axis, diminished to 2.5% for New Member States. As can be seen from graph 2.4.3, at EU-27 level, Axis 4 represents around 6% of the EAFRD contribution. Spain (11.3%), Portugal (10.1%), Ireland (10%), the Netherlands (9.9%), Denmark (9.6%) and Estonia (9.6%) are the Member States which attribute most importance to this bottom-up approach, while it is less popular in Slovakia (3.0%), Slovenia (2.9%), Cyprus (2.7%), Latvia (2.5%), Bulgaria (2.4%) and Romania (2.3%).

Through Leader, support is granted to local action groups to implement local development strategies with a view to achieving the objectives of one or more of the three other axes, as well as to implement cooperation project involving the objectives selected, and to run and animate the local action group. This way the amounts allocated to the Axis 4 contribute to the

²⁷ The measure "Complements to direct payments" (measure code 611) is available only for Bulgaria and Romania. This measure is a transfer of EAFRD funds to the Pillar 1 in these countries.

achievement of the 3 core objectives, and are taken into account when determining the percentage allocated to each axis.

Graph 2.2.4: Importance and composition of Leader by Member State, programming period 2007-2013

Strikingly, measures implemented via Leader contribute mainly to Axis 3. In Ireland, Lithuania, Poland and Portugal, Leader even contributes exclusively to Axis 3. On the other hand, in Slovakia, it is entirely devoted to Axis 1, while Axis 2 is in any case the least represented. It is worth noting that in some programmes, Axis 3 is only implemented via Leader (e.g. in Ireland).

2.2.3.3. Relative importance of the three main axes

According to Article 17 of Council Regulation (EC) No 1698/2005 of 20 September 2005, at least 10% of the total EAFRD contribution should be devoted to Axis 1, at least 25% to Axis 2, and at least 10% to Axis 3.

At EU-27 level, Axis 1 (including Leader actions contributing to this objective) represents 34% of the total EAFRD contribution, while Axis 2 gets the lion's share with 44.1%, and Axis 3 with 17.6%.

Please note that these calculations have not taken into account two measures of Axis 4, "Implementing co-operation projects" (measure code 421) and "Running the local action group, acquiring skills and animating the territory" (measure code 431) because these are "horizontal" and can contribute to the objectives of the three "thematic" axes.

Graph 2.2.5 presents the relative importance of the 3 main axes, as percentage of the EAFRD contribution devoted to these 3 axes. Funds implemented through Leader have been reattributed to the respective axes. Despite the common minimum percentages, the picture looks quite different in the various Member States.

Measures of Axis 1 show the most important percentages in Belgium (48.6%), Latvia (47.2%), Hungary (45.6%), Portugal (45.5%), Spain (45%), Cyprus (%), Greece (43.7%), and Romania (40.13%). Less than 20% is attributed to this axis in Sweden (15.%), Austria (1.8%), United Kingdom (12.7%), Finland (11.6%) and Ireland (10.3%).

Contribution to Axis 2 is the highest in Ireland (79.6%), Finland (73.3%), United Kingdom (72.6%), Austria (72%), Sweden (70.2%), Denmark (63.3%), and Luxemburg (59.1%). Contribution to Axis 2 is less than 30% in Latvia (28.1%), Malta (26.6%), Bulgaria (24.5%) and Romania (23.7%).

EAFRD contribution allocated to Axis 3 never exceeds 40%. The highest rates of contribution are found in Malta and in the Netherlands (33.7%), Bulgaria (27.9%), Germany (28.5%), Romania (25.6%), Poland (23.2%), Latvia (20.1%) and Estonia (19.4%), and the lowest rates in Cyprus, France and Austria (10.1%), Luxembourg (9%), Portugal (8.3%) and Ireland (7.8%).

Graph 2.2.5: Relative importance of the 3 thematic axes by Member State, programming period 2007-2013

2.2.4. Main Rural Development instruments²⁸

Excluding the "511 – Technical assistance", a set of 42 measures is proposed to the Member States. Two additional measures have also been made available specifically for Bulgaria and Romania, namely measure "143 - Provision of farm advisory and extension services in Bulgaria and Romania" and measure "611 - Complements to Direct Payments for Bulgaria and Romania". They represent 0.7 billion euros for the whole period, or 0.9% of the whole EAFRD envelope.

The measures of EAFRD are codified as follows²⁹:

111	Vocational training, information actions, including diffusion of scientific knowledge and innovative practices for persons engaged in the agricultural, food and forestry sectors
112	Setting up young farmers
113	Early retirement of farmers and farm workers
114	Use by farmers and forest holders of advisory services
115	Setting up farm management, farm relief and farm advisory services, as well as forestry advisory services
121	Farm modernisation
122	Improving the economic value of the forest
123	Adding value to agricultural and forestry products
124	Cooperation for development of new products, processes and technologies in the agricultural and food sector
125	Improving and developing infrastructure related to the development and adaptation of agriculture and forestry
126	Restoring agricultural production potential damaged by natural disasters and introducing

²⁸ Reminder: the analysis only covers EAFRD.

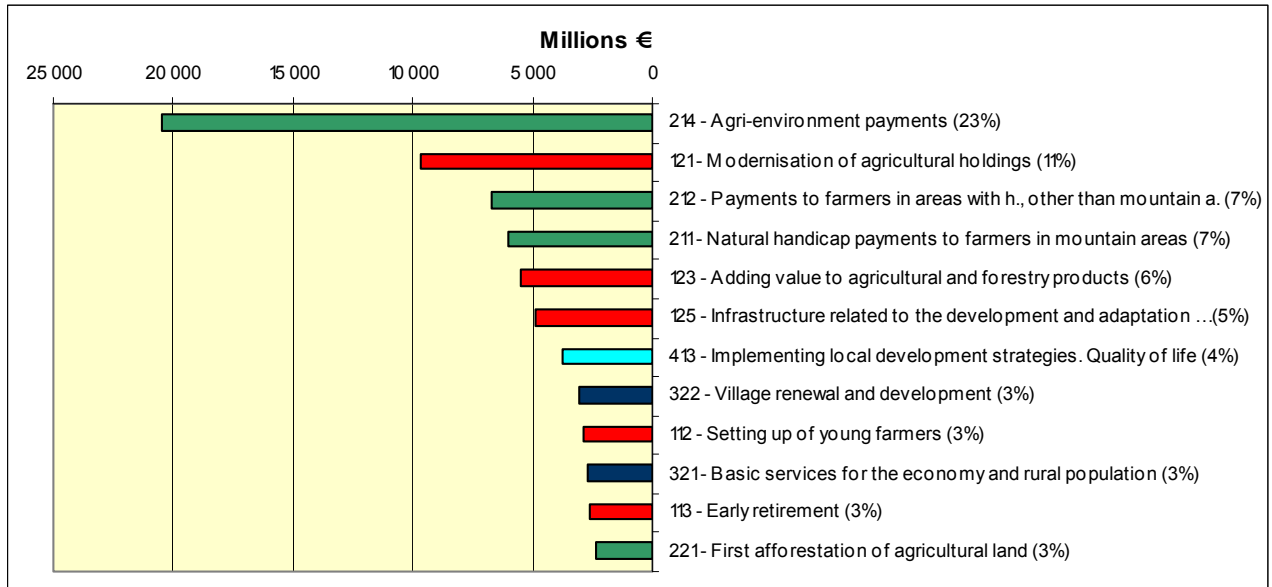

²⁹ Commission Regulation (EC) No 1974/2006 of 15 December 2006 laying down detailed rules for the application of Council Regulation (EC) No 1698/2005 on support for rural development by the European Agricultural Fund for Rural Development (EAFRD)

	appropriate prevention actions
131	Helping farmers to adapt to demanding standards based on Community legislation
132	Supporting farmers who participate in food quality schemes
133	Supporting producer groups for information and promotion activities for products under food quality schemes
141	Supporting semi-subsistence farms undergoing restructuring
142	Setting up of producer groups
143	Provision of farm advisory and extension services in Bulgaria and Romania
211	Natural handicap payments to farmers in mountain areas
212	Payments to farmers in areas with handicaps, other than mountain areas
213	Natura 2000 payments and payments linked to Directive 2000/60/EC
214	Agri-environmental payments
215	Animal welfare payments
216	Support for non-productive investments
221	First afforestation of agricultural land
222	First establishment of agroforestry systems on agricultural land
223	First afforestation of non-agricultural land
224	Natura 2000 payments
225	Forest environment payments
226	Restoring forestry potential and introducing prevention actions
227	Support for non-productive investments
311	Diversification into non-agricultural activities
312	Support for the creation and development of micro-enterprises
313	Encouragement of tourism activities
321	Basic services for the economy and rural population
322	Village renewal and development
323	Conservation and upgrading of the rural heritage
331	Training and information for economic actors operating in the field covered by Axis 3
341	Skills acquisition and animation with a view to preparing and implementing a local development strategy
411	Local development strategies. Competitiveness.
412	Local development strategies. Environment/land management.
413	Local development strategies. Quality of life/diversification.
421	Transnational and inter-regional cooperation
431	Running the local action group, skills acquisition, animation
511	Technical assistance
611	Complements to direct payments for Bulgaria and Romania

2.2.4.1. At EU level

Graph 2.2.6 presents the most important measures for the 2007-2013 programming period in terms of percentage of EAFRD contribution at EU-27 level.

Graph 2.2.6: Main RD measures of the 2007-2013 programming period - EU-27

At EU-27 level, the most important measures are agri-environment payments (23%), modernisation of agricultural holdings (11%), and less favoured areas payments (7% in mountain areas and 7% in other areas). Axis 2 gets therefore the lion share. The first measure concerning axis 4 is "413 – Implementing local development strategies. Quality of life", which correspond to axis 3 measures implemented via Leader. It is followed by "322 - Village renewal and development" measure (3%).

Graph 2.2.7 shows the relative importance of measures within their respective axis. As some of them may be implemented via Leader, the picture may be slightly biased, especially for Axis 3.

For Member State level information please find details in annex (Graph 4.1.1.2 Main rural development measures of the 2007-2013 programming period at Member State level).

Graph 2.2.7: Relative importance of measures within axis for the 2007-2013 programming period - EU-27

a – Axis 1

b – Axis 2

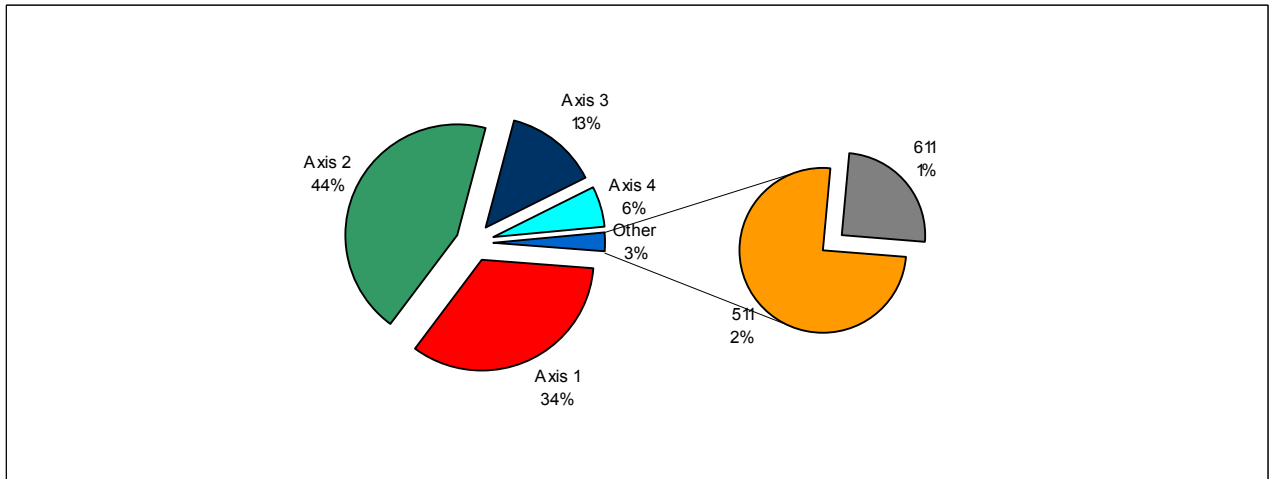

c – Axis 3

d – Axis 4

Graph 2.2.8: Relative importance of axes and measures 511, 611 within the total EAFRD contribution for the 2007-2013 programming period - EU-27

In axis 1, the measure "121 - Modernisation of agricultural holdings" is the most important (9.7 billion euro). It is followed by "123 - Adding value to agricultural and forestry products" (5.5 billion euro) and "125 - Infrastructure related to the development of agriculture and forestry" (4.9 billion euro). These 3 measures account for 65% of all funds under axis 1.

Under axis 2, the same concentration on a few measures can be observed, with "214 – Agri-environment payments" (20.4 billion euro) representing more than half of all funds under axis 2. It is followed by LFA payments in and outside mountains areas (measures 211 & 212, which sum up to 12.7 billion euro). These three measures account for 82% of all funds under axis 2.

Last one, axis 3 seems to be more balanced as the three main measures account only for 64% of the total of funds allocated to this axis. It is namely "322- Village renewal and development" (3 billion euro), "321- Basic services for the economy and rural population" (2.7 billion euro) and "312- Business creation and development" (2.2 billion euro).

2.2.4.2. At measure level per Member State

If one focuses on the importance of each measure within an axis, one observes that the measure "121 – Modernisation of agricultural holdings" is the most relevant almost in every Member States, except in Spain, the Netherlands, Portugal, Romania, Slovenia, Finland and United Kingdom. At EU-27 level, the share of this measure is 30.3% of the EAFRD contribution allocated to axis 1 globally. In Luxembourg, this share is 76%. In Latvia, Hungary and Lithuania this measure has the highest EAFRD contribution among the other instruments of EAFRD. Generally, this measure is followed by "123 - Adding value to agricultural and forestry products" and in Spain this measure is the second main RD instrument just after the "214 – Agri-environment payments".

As for the axis 2 measures, the "214 - Agri-environment payments" is the instrument with the highest financial allocation in most Member States. At EU-27 level, it represents more than 50% of the EAFRD contribution allocated to this axis and his share is higher than 70% in Belgium (82%), Sweden (78%), the Netherland (75%), Denmark (73%) and in United Kingdom (72%). 14 Member States out of 27 have integrated the measure "211 – Natural handicap payments to farmers in mountain areas" that has the highest relative importance within axis 2 in France (48%).

Within axis 3 measures, the "322 – Village renewal and development" has the highest share with 25% in the EU-27. This share is the highest in Romania (63%) and it is followed by Cyprus (48%) and Estonia (40%). As for the measure "311 – Diversification into non-agricultural activities", it represents 40% of the total EAFRD contribution devoted to axis 3 in Italy and in Finland. The measure "312 – Support for business creation and development" is the most significant one within the axis in Estonia (60%) and in Latvia (49%). It is also observed that the measure "321 – Basic services for the economy and rural population" plays the major role within axis 3 in Denmark (58%). In Malta, the measure "323 – Conservation and upgrading of the rural heritage" is the main RD instrument with a share of 20.6% of the total EAFRD contribution and of 64% of the axis 3 contribution. In Portugal, this measure represents 75% of the EAFRD contribution allocated to axis 3. The only Member State which has no EAFRD financial allocation to the axis 3 is Ireland, as this objective is fully implemented using axis 4 (Leader) measure 413.

Graph 2.2.9 Relative importance of axis 1 measures per Member States in % within the total EAFRD contribution allocated to this axis, programming period 2007-2013

Graph 2.2.10 Relative importance of axis 2 measures per Member States in % within the total EAFRD contribution allocated to this axis, programming period 2007-2013

Graph 2.2.11 Relative importance of axis 3 measures per Member States in % within the total EAFRD contribution allocated to this axis, programming period 2007-2013

Graph 2.2.12 Relative importance of axis 4 measures per Member States in % within the total EAFRD contribution allocated to this axis, programming period 2007-2013

For Member State level information please find details in annex:

- Table 4.1.1.1 Financial plans per Member State, programming period 2007-2013
- Graph 4.1.1.1 Relative importance of axes within the EAFRD contribution for the 2007-2013 programming period by Member State.

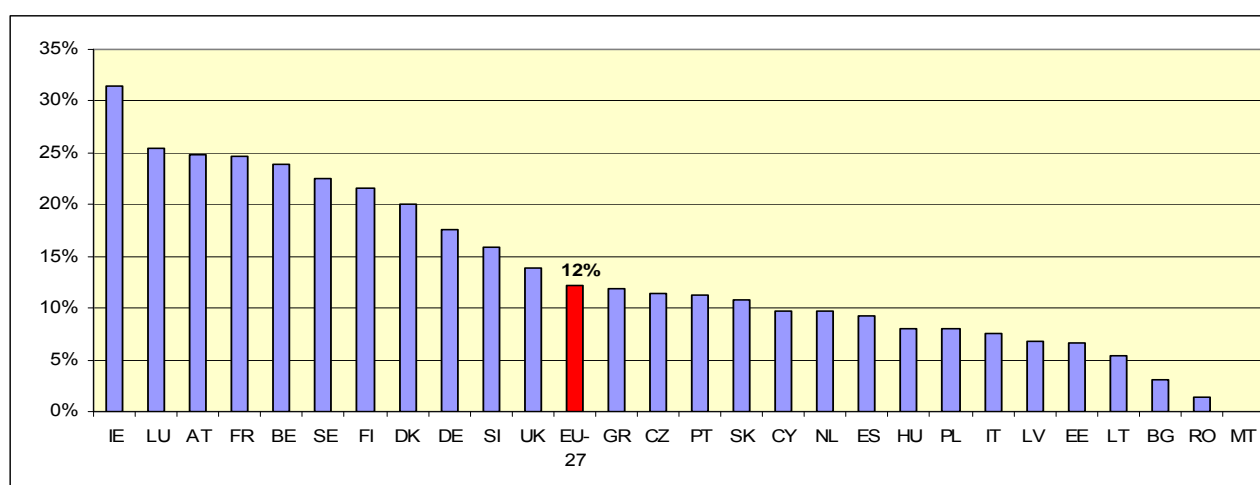

2.2.5. Overview of EAFRD financial implementation

(tables and graphs 4.1.2.1 – 4.1.2.3)

2.2.5.1. General overview

The total financial plan for all measures and Member States amounts to 91 billion euros over the period 2007-2013³⁰. Until the end of 2008, declarations of expenditure arrived to the European Commission of 11.1 billion euros, which is 12% of the financial plans for the period 2007-2013 for the EU-27. The ratio between the planned expenditure (financial plan) for the whole period (2007-2013) and the amount of declaration of expenditure is above or equal of 25% until the end of 2008 in Ireland (31%), in Luxembourg, in Austria and in France (25%). It is the lowest in Lithuania (5%), Bulgaria (3%), Romania (1%) and in Malta (0%)³¹.

Graph 2.2.13 Comparison of the financial execution (ratio between the declaration of expenditure until the end of 2008 and the financial plans for the period 2007-2013) per Member State in percentage

The speed of financial execution in a Member State depends on several aspects such as:

- The **submission of the rural development programmes and the approval of them** by the European Commission. Each rural development programme covers the period between 1 January 2007 and 31 December 2013 but the submission and the approval of them vary significantly. For example, the rural development programme of the Netherlands was approved in June 2007, of Ireland in September 2007 but many programmes were approved later, in 2008 (such as rural development programmes of Bulgaria, Latvia, Malta and Romania). Besides the official act, the date of approval (Commission Decision) corresponds to the advance payment from the Commission to the Member State. In fact, the Member States start to draft and to approve selection criteria of the measures and to prepare and issue applications (call for tenders) after the approval of the programme.
- The **composition of the programme (types of chosen measures)**. All measures have different characteristics but in general, it is obvious that aids granted under axis 2 very often refer to agri-environment measures or compensatory allowances for less favoured areas, which are often paid, either on the basis of ongoing contracts or as annual

³⁰ Not all programmes have been adapted following the increase of the funding for Rural Development following the "Health Check" and recovery package decisions that increased the financial framework to 96.2 billion euros.

³¹ Rural Development Programme of Malta was approved in February 2008 and Malta started to submit declaration of expenditure in 2009.

payments with a more or less continuous character. On the contrary, financing projects under axis 1 or axis 3 usually requires a preparatory work to be undertaken by the managing authority of the programme. This work starts by publishing the conditions for granting aid under the programmes and receiving claims from potential beneficiaries, and continues with selection procedure against selection criteria previously agreed by the monitoring committee. In the case of investment projects, particularly infrastructure (roads, sewage water) under measure "321 – Basic services for the economy and rural population", there is a long time between signing contracts and executing the work and reclaiming the expenditure. There is a certain time needed for public procurement to select the contractor and time needed to physically implement the project. The same concerns to the axis 4 measures (Leader) because the procedure of the selection of Local Action Groups also takes time and the actual project implementation and therefore the financial execution starts later.

Countries which put more emphasis on axis 2 measures, for example Ireland, (80% of the total EAFRD contribution), 49% to the measure "214 – Agri-environmental payments", 21% to "212 – Payments to farmers in areas with handicaps, other than mountain areas" could start the financial implementation relatively earlier. The similar composition of axis/measures corresponds to Luxembourg and Austria, where the relative importance of axis 2 measures is quite high, 59% and 72% respectively. For the New Member States, the relative importance of axis 2 measures is higher than the measures of axis 1 only in Czech Republic and Slovakia, almost equal in Cyprus, in Estonia and in Slovenia. In Hungary, in Latvia, in Lithuania, in Malta and in Poland the axis 1 measures have significantly higher importance (more than 40% and 35% in Malta).

- The **ongoing contracts from the previous programming period**. It mainly concerns to the axis 2 measures (e.g. agri-environment payments). In this case, the amounts declared in the 4th quarter of 2006 were paid in 2007 based on the transitional provisions allowing expenditure under EAGGF Guarantee section incurred from 16 October to 31 December 2006 to be taken over by the EAFRD budget in accordance with Article 39(1) (c) of Council Regulation (EC) No 1290/2005.
- The **previous experience in the implementation of measures**. As most measures where existing in the previous programming period, several Member States have already set up implementation procedures that could be reused for the 2007-2013 programmes. In particular, the New Member States have less experience in programme implementation, most of them started to design the institutional background of rural development programme implementation with SAPARD, from 2000 and gained real experience during the transitional period (between 2004 and 2006)³².

2.2.5.2. Overview at axis and measure level

The amounts declared³³ (according to the declaration of expenditure sent by the Member States) until the end of 2008 is 11.13 billion euros. The Graph below shows the composition of declaration of expenditure arrived until the end of 2008 by axis.

³² Bulgaria and Romania have only SAPARD, no other transitional rural development programmes have been implemented (TRDI, EAGGF Guidance) before accession.

³³ Declaration of expenditure: 2007 (4th quarter of 2006, 2nd, 3rd and 4th quarter of 2007) and 2008 (1st, 2nd, 3rd and 4th quarter). The amounts declared in the 4th quarter of 2006 were paid in 2007 based on the transitional provisions allowing expenditure under EAGGF Guarantee section incurred from 16 October to 31 December 2006 to be taken over by the EAFRD budget in accordance with Article 39(1) (c) of Council Regulation (EC) No 1290/2005.

Graph 2.2.14 Composition of declaration of expenditure per axis and measures 511 and 611 for the 2007-2013 programming period until the end of 2008– EU-27

At EU-27 level, 20% of the declared expenditure connects to measures under axis 1, 75% to measures under axis 2 and 2% and 0.2% to axes 3 and 4 respectively. Due to the facts of programming and of the characteristic of measures under different axes, axis 2 has the lion share of declared expenditure.

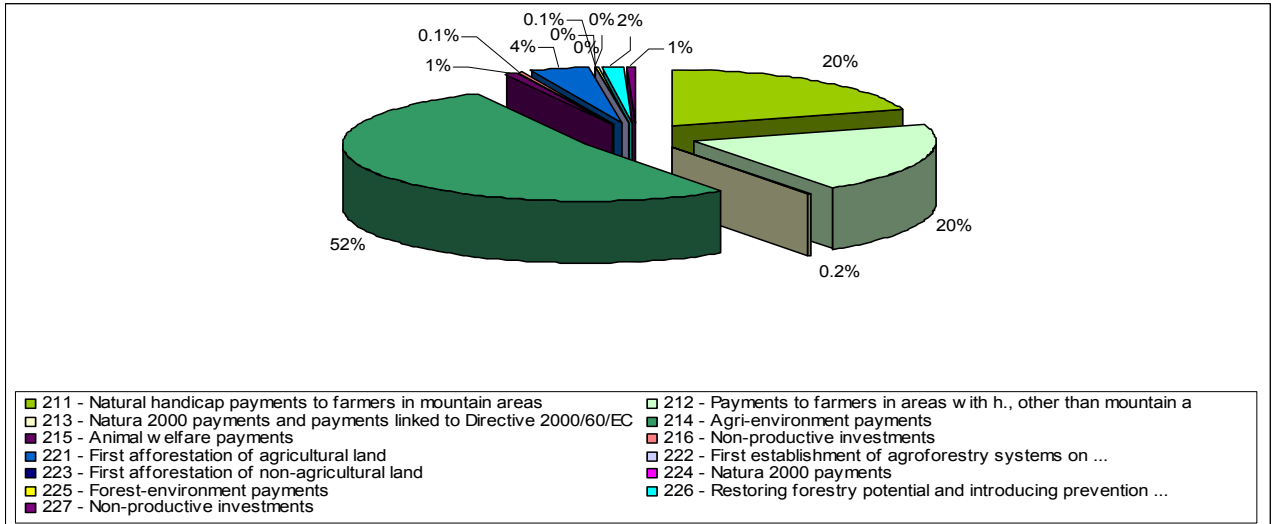

Graphs in point 2.2.15, show the declaration of expenditure arrived until the end of 2008 per measure within their respective axis. Owing to the composition of programmes and the characteristic of measures the following measures have the relatively highest proportion of declared expenditure within the axis: axis 1 – "121 – Farm modernisation" (33%), axis 2 – "214 – Agri-environmental payments" (52%), axis 3 – "322 – Village renewal and development" (30%) and axis 4 – "413 - Local development strategies. Quality of life/diversification." (68%).

Graph 2.2.15 Composition of declaration of expenditure arrived until the end of 2008 within axis for the 2007-2013 programming period – EU-27

a – Axis 1

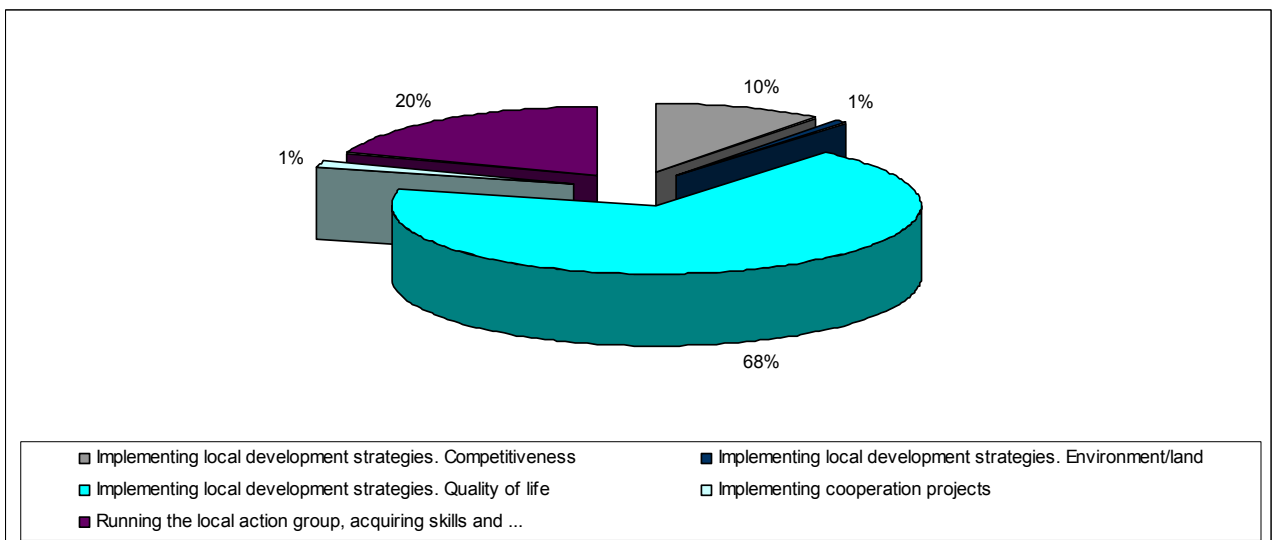

b – Axis 2

c – Axis 3

d – Axis 4

If one focuses on the declaration of expenditures arrived until the end of 2008, one observes that globally the highest amount of declared expenditure has the measure "214 – Agri-environmental payments". It is because the measure "214 - Agri-environment payments" has the highest financial allocation in most Member States (at EU-27 level, it represents more than 50% of EAFRD contribution allocated to this axis and its share is the higher than 70% in Belgium (82%), Sweden (78%), the Netherland (75%), Denmark (73%) and in United Kingdom (72%)). There are also differences in the relative importance of this measure within one Member State in the total EAFRD contribution per programme, for example in Vlaanderen it is 22% and in Wallonie it is 38% (Belgium). In United Kingdom, it is 63% in the programme of England, 37% of Northern Ireland, 17% and 36% of Wales.

14 Member States integrated the measure "211 – Natural handicap payments to farmers in mountain areas" into programming documents and it has the highest relative importance within the total EAFRD contribution in France (25%), Finland (22%) and between the New Member States in Slovenia (21%) and Slovakia (16%). This measure has the second highest amount declared until the end of 2008.

Among the measures of the axis 1, the highest amount was declared by the Member States under measure 121 – "Modernisation of agricultural holdings" (7%).

Graph 2.2.16 Measures with the highest amount of expenditure declared until 31/12/2008 by Member States in million €

The tables 4.1.2.1 to 4.1.2.3 in annex show the financial plans and declarations of expenditure until the end of 2008 by each Member State and by the EU-27, broken down by rural development measures.

2.2.6. General overview of pre-accession programmes

(tables and graphs 4.2.1.1 to 4.2.1.5)

2.2.6.1. SAPARD in Croatia

The SAPARD Programme in the Republic of Croatia, in implementation since 2006, is based on the Agricultural and Rural Development Plan 2005-2006, associated regulations and the official conferral of management of aid to the Directorate for Market and Structural Support in Agriculture. The SAPARD Rural Development Programme for Croatia was approved by Commission Decision EC (2006) 301 of 8 February 2006, in accordance with Article 4(5) and (6) of Regulation (EC) No 1268/1999 and has been modified twice, in October 2007 and August 2008.

The Croatian government and the Commission, acting on the behalf of the European Community, signed on 29 December 2005 the Multi-annual Financing Agreement (MAFA) laying down the technical, legal and administrative framework for the execution of the SAPARD.

The SAPARD Programme 2005-2006 constitutes a strategy which aims to tackle specific drawbacks in the rural areas in Croatia. The Programme can be considered as a first step towards setting up the legal, administrative and financial operational frame for the implementation of further EU co-financed programmes, especially the Instrument for pre-accession Assistance for Agriculture and Rural Development (IPARD) for the period 2007-2013. The integrated planning process of IPARD will be in parallel with the implementation of the SAPARD Programme. Thus building up the mechanisms for SAPARD implementation has a useful impact on the increase of the institutional capacities and human resources while building up the management structures and control systems for IPARD.

In accordance with national and sectoral priorities, the general objectives of the SAPARD Programme integrate the principles on "Community support for pre-accession measures for agriculture and rural development in the applicant countries of central and eastern Europe in the pre-accession period" laid down in Council Regulation (EC) 1268/1999. Art. 4.3 says "In their plans, applicant countries shall ensure that priority is given to measures to improve market efficiency, quality and health standards and measures to create new employment in rural areas, in compliance with the provisions on the protection of the environment" and in the Council Regulation (EC) 2257/2000 specifically taking into account Croatia's candidate status:

- The implementation of the *Acquis Communautaire* concerning the Common Agricultural Policy and related policies;
- Finding sustainable solutions for pressing adaptation problems in specific priority fields of the agricultural sector and Croatia's rural areas.

The priority areas and specific objectives of the SAPARD Programme are as follows:

- Priority 1: Development of the rural economy. Specific objective: Strengthening and improvement of the agricultural production capacity.
- Priority 2: Improving the access to markets. Specific objective: Strengthening and improvement of the capacity for processing and marketing of agricultural and fisheries products.
- Priority 3: Development of rural infrastructures. Specific objective: Creating better living conditions in rural areas by improving rural infrastructures.

The short implementation time, as well as the limited financial volume makes it indispensable to make clear-cut choices on the specific aims, which are to be achieved in each priority field. This inevitably narrows down the focus to measures which have a high expectable leverage effect on the rural economy and living conditions and which meet an urgent need for intervention. The SAPARD assistance contributes to a sustainable and social coherent rural development process consistent with international environmental practices by developing the rural economy, enhancing income and providing and securing employment opportunities in the rural areas to counterbalance disparities between regions and compared to rural areas, as well as to develop and to rehabilitate basic rural infrastructure, also in war affected areas.

Concerning the SAPARD Programme implementation, Croatia established two main bodies for future implementation of European funds: the Sapard Agency and the Managing Authority under fully decentralised system without the Commission ex-ante Controls.

Table 2.2.2 Specific objectives per selected priority

Priority	Specific objective	Corresponding measure and sub-measures
Development of the rural economy	Strengthening and improvement of the agricultural production capacity	Investment in agricultural holdings <ul style="list-style-type: none"> Investment in the production of milk (dairy cows), meat (cattle and pigs) and poultry (meat and eggs) ... in the production of fruits and vegetables ... in the storage of cereal and oil seeds.
Improving the access to markets	Strengthening and improvement of the capacity for processing and marketing of agricultural and fisheries products	Improving the processing and marketing of agricultural and fisheries products <ul style="list-style-type: none"> Improving the processing and marketing of milk and dairy products ... of meat ... of fish and shells ... of fruits and vegetables.
Development of rural infrastructures	Creating better living conditions in rural areas by improving rural infrastructures	Improvement of infrastructure in rural areas with specific handicaps <ul style="list-style-type: none"> Improvement of fire-prevention/multifunctional roads infrastructures ... of unclassified roads connecting farm zones ... of sewerage systems and wastewater treatment plants ... of heating plants which use waste and/or by-products from agriculture and/or forestry.
Technical assistance (information and publicity campaigns)		

Source: SAPARD Programme, Republic of Croatia

Within the framework of the Croatian SAPARD four measures were chosen originally:

- Measure 1 – Investment in agricultural holdings
- Measure 2 – Investment in processing and marketing of agricultural and fisheries products
- Measure 3 – Improvements in advancing rural infrastructure and
- Measure 4 – Technical assistance.

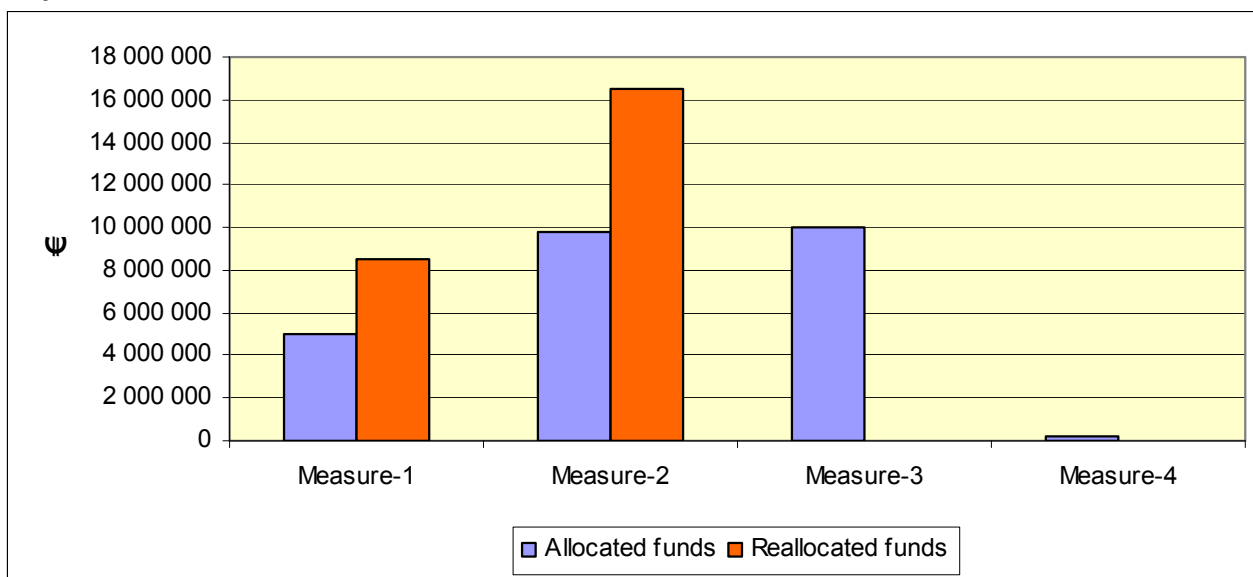

However, only two first of those four measures have received conferral of management. Based on that, the Managing Authority requested the reallocation of funds from Measure 3 "Improvements in advancing rural infrastructure" and Measure 4 "Technical assistance" to Measure 1 "Investment in agricultural holdings" and Measure 2 "Investment in processing and marketing of agricultural and fisheries products" from the SAPARD Programme, in the following ratio: Measure 1 – 33.9% and Measure 2 – 66.1%. This reallocation was approved by the Commission during the second programme amendment in August 2008.

Table 2.2.3 Reallocation of funds under SAPARD in €

Measures	Allocated	Reallocated	Total
Measure - 1: Investment in agricultural holdings	5 000 000	3 474 750	8 474 750
Measure - 2: Improving the processing and marketing of agricultural and fisheries products	9 750 000	6 775 250	16 525 250
Measure - 3: Improvement of infrastructure in rural areas with specific handicaps	10 000 000	0	0
Measure - 4: Technical assistance	250 000	0	0
Total		10 250 000	25 000 000

Source: The Annual Report on the Implementation of the SAPARD, Republic of Croatia for 2008

Graph 2.2.17 Reallocation of EU funds under SAPARD in €

Graph 2.2.18 SAPARD – EU contribution to rural development in Croatia by measure

From the beginning of the programme until the end of 2008 Croatia published three Calls for Applications under Measure 1 and 2. From those three SAPARD Calls 120 applications were received, of which 33 at the end of 2008 project proposals were approved and subsequently contracted, with a total investment value of 241 574 245 HRK and a total contracted value of 103 million HRK.

The European Commission in July 2008 officially extended the validity of final payment requests; the deadline is 31st December 2009.

Table 2.2.4 Execution of SAPARD – comparison of planned EU contribution and declaration of payments until the 4th quarter of 2008

Measures	Total - Planned	Total - Paid	in %
Measure - 1: Investment in agricultural holdings	8 474 750	1 648 116	19%
Measure - 2: Improving the processing and marketing of agricultural and fisheries products	16 525 250	1 906 199	12%
Measure - 3: Improvement of infrastructure in rural areas with specific handicaps	0	0	0%
Measure - 4: Technical assistance	0	0	0%
Total	25 000 000	3 554 314	14%

2.2.6.2. IPARD

The Council Regulation (EC) No 1085/2006 of 17 July 2006 established the IPA, the Instrument for Pre-Accession Assistance in order to improve the efficiency of the Community's External Aid. This Assistance is programmed and implemented according to the following components:

- Transition Assistance and Institution Building;
- Cross-Border Cooperation;
- Regional Development;
- Human Resources Development;
- **Rural Development.**

The Rural development Component supports the policy development as well as preparation for the implementation and management of the Community's common agricultural policy in Croatia, Turkey and The former Yugoslav Republic of Macedonia (FYROM). In particular, contributes to the sustainable adaptation of the agricultural sector and rural areas and to the candidate countries' preparation for the implementation of the *Acquis Communautaire* concerning the Common Agricultural Policy and related policies.

The areas and forms of assistance (axes and their measures) under the Rural Development component according to Commission Regulation (EC) No 718/2007 of 12 June 2007:

- Improving market efficiency and implementation of Community standards (Priority Axis 1);
 - Investments in agricultural holdings to restructure and to upgrade to Community standards;
 - Support for the setting-up of producer groups;
 - Investments in the processing and marketing of agriculture and fishery products to restructure those activities and to upgrade them to Community standards.
- Preparatory actions for implementation of the agri-environmental measures and local rural development strategies (Priority Axis 2);
 - Actions to improve the environment and countryside;
 - Preparation and implementation of local rural development strategies.
- Development of rural economy (Priority Axis 3);
 - Improvement and development of rural infrastructure;
 - Diversification and development of rural economic activities;
 - Improvement of training.
- Technical assistance.

Table 2.2.5 Specific objectives per selected priority

Priority	Specific objective	Corresponding measure
Priority 1 – Improving market efficiency and implementation of Community standards	Strengthening and improvement of the agricultural production and market capacity	Investments in agricultural holdings to restructure and to upgrade to Community standards
		Support for producer groups
		Investments in the processing and marketing of agriculture and fishery products
Priority 2 – Preparatory actions for implementation of the Agri-environmental measures and local rural development strategies	Strengthening and improvement of the capacity for implementation of obligatory pilot project in Agri-environment and Leader based approach	Actions to improve the environment and the countryside
		Preparation and implementation of local rural development strategies
Priority 3 – Development of rural economy	Creating better living conditions in rural areas by improving rural infrastructures and promoting business activities	Improvement and development of rural infrastructure
		Diversification and development of rural economic activities
		Improvement of training
Supportive measure: Technical assistance, information and publicity campaigns		

Public expenditure in principle does not exceed a ceiling of 50% of the total eligible cost of the investment. However, that ceiling can be raised up to 55% for investments in agricultural holdings made by young farmers, to 60% for investments in agricultural holdings in mountain areas, to 65% for investments in agricultural holdings in mountain areas made by young farmers, for example.

The Community contribution does not exceed a ceiling of 75% of the eligible expenditure but this ceiling can be raised up as well, for instance, up to 80% for the measures covered by priority axis 2 and technical assistance.

For the period covered by this report IPARD is existing in Croatia, Turkey and in the former Yugoslav Republic of Macedonia (FYROM). According to the programming documents the total EU contribution for the three countries 637 900 000€ for the period 2007-2011. The share of this total amount between the countries is the following: Croatia 20%, Turkey 73% and FYROM 7%. As for the share of EU Contribution between the 3 axes, all the three countries put the emphasis on improving market efficiency and implementation of Community standards (Axis 1), Croatia with 65%, Turkey with 71% and the FYROM with 75%, according to the approved programmes. The relative importance of Axis 3 is between 18% (FYROM) and 30% (Croatia) and then the Axis 2 follows with 2% (Croatia and Turkey) and 3% (FYROM). The EU Contribution of Technical assistance is the lowest in Turkey (2%) and the highest in the FYROM (4%).

IPA implementing regulation proposes 9 measures under the Rural Development Component. Croatia and Turkey selected 7 measures and the FYROM chose all of them. Croatia excluded "*Support for producer groups*", "*Improvement of training*", Turkey excluded "*Improvement of training*" and "*Improvement and development of rural infrastructure*" as well.

At this stage all the three countries have the approved programming documents and they are now in the phase of preparation for the accreditation (conferral of the management). Therefore until now the effective programme implementation such as commitments and payments has not started yet. Croatia and FYROM should receive the conferral decision by the end of 2009 for first two and three measures respectively.

Three IPARD programmes were adopted by the Commission in February 2008 and since have been modified twice in order to include additional financial allocation. The first IPARD Monitoring Committees took place in 2008, during which Rules of procedures were adopted. The IPARD Monitoring Committees meet at least twice a year and now are fully operational.

CHAPTER 3
STATISTICAL DESCRIPTION

Chapter 3 – CONTENTS

Foreword

List of indicators

Correspondence table between CMEF order & RD Report numbering

Correspondence table between the NUTS levels and national administrative units

Correspondence table between the country codes and the country names

Section 3.1 Importance of Rural Areas

Section 3.2 Socio-Economic Situation in Rural Areas

Section 3.3 Sectoral Economic Indicators

Section 3.4 Environment

Section 3.5 Diversification & Quality of Life in Rural Areas

Annex 3.A Glossary of Terms & Definitions

Annex 3.B Main Sources

Annex 3.C Technical Annex

Annex 3.D Lead baseline indicators data at regional level

Foreword

1. The following chapter - statistical description - provides tables, maps and graphs organised by sections:

- 3.1 Importance of rural areas
- 3.2 Socio-economic situation in rural areas
- 3.3 Sectoral economic indicators
- 3.4 Environment
- 3.5 Diversification and quality of life in rural areas
- 3.6 Leader

2. It is based on the lists of objective- & context-related baseline indicators defined for the Common Monitoring and Evaluation Framework (CMEF) put in place for the rural development policy over the 2007-2013 period.

- Initially organised by type (objective-related versus context-related) and after the four axes defined in EC regulation n°1698/2005, the indicators have been reallocated by section. A correspondence table between the new order and the CMEF order is provided in this section.
- Yet the original names have been maintained, the indicators are presented according to the following nomenclature:
 - objective xx / Oxx: baseline indicator objective-related n° xx in the CMEF
 - context xx / Cxx: baseline indicator context-related n° xx in the CMEF
- The original measurement has been kept as well. Nevertheless, for analysis needs, it may have been slightly changed for some indicators (mainly relative value versus absolute number). In such a case, the reference of the indicator appears into brackets, e.g. (Objective xx) – name of the indicator. Relevant information on measurement, definition and sources used for each indicator are to be found in the "Technical Annex" (Annex 3.C), a detailed presentation of the sources being available in Annex 3.B.

3. For some of the indicators, data are available at regional level, whereas for some others only data at national level are available.

- In the case of data at national level, (or of data at regional level, when the focus is not on the rural aspect, but on the sectoral aspect) "summary thematic tables" are provided, so as to allow an easy comparison between indicators referring to the same topic (e.g. Food industry indicators). The table is then followed by the relevant illustrations - graphs in most cases. For every indicator, graph and table have the same number.
- As for data at regional level, a description by rural character is provided for the indicators relating to the following sections:
 - 3.1 Importance of rural areas
 - 3.2 Socio-economic situation in rural areas
 - 3.5 Diversification and quality of life in rural areas

This means that the following items are presented for each indicator:

- A map showing the indicator value at the most detailed geographical level (NUTS 2 or 3³⁴);

- A "summary table" which presents the results according to the rural character: Predominantly Rural (PR) / Intermediate Regions (IR) / Predominantly Urban (PU) following the OECD definition as well as the national value.

This "summary table" is elaborated as follows: for each country, all the NUTS 2 (respectively NUTS 3) regions are "flagged" according to the OECD methodology (see Box 1.1 in Chapter 1). For a given indicator, each of these regions has a concrete value. To get the national value for Predominantly Rural – respectively Intermediate Regions, and Predominantly Urban – we just have to sum the indicator value for all the regions bearing the flag "PR"– respectively "IR" or "PU".

For example: at NUTS 2 level, Hungary counts 7 regions, each of which being Predominantly Rural (PR) / Intermediate Regions (IR) / Predominantly Urban (PU). If we consider the population within those regions, we have :

NUTS2 region	OECD Flag	Population(1000 inhabitants)
HU10	PU	2864.2
HU21	IR	1107.8
HU22	IR	999.8
HU23	PR	969.2
HU31	IR	1256.5
HU32	PR	1529.2
HU33	PR	1344.8
Total= Hungary	-	10 071.5

If we now sum for each "category" the population in the NUTS regions flagged with the relevant flag, and divide it by the country total to get the importance of population in each type of area we have:

	1000 inhab.	% of total
PU	2 864.20	28.44
IR	3 364.10	33.40
PR	3 843.20	38.16

These values do correspond to the values given in table 3.1.2.2.b for the indicator "Share of Population in rural areas".

Tables providing results according to the rural character are based on the lowest geographical breakdown available (NUTS 3 if possible). For some indicators, information is only available at NUTS 2. To allow the reader to compare results according to the rural character of the areas for all indicators, tables are also provided at NUTS 2 level even if the information is available at NUTS 3 level. This presentation also highlights the importance of the geographical precision.

³⁴ NUTS: Nomenclature of territorial units for statistics – See Glossary of Terms & Definitions (Annex 3.A) for more explanations

Namely, as shown on maps 3.1.1a & b for indicator Context 1-"Designation of rural areas", the picture greatly changes whether the OECD definition is applied at NUTS 2 or NUTS 3 level. This means that for the same indicator and same year, the value for rural or the other OECD types of areas may significantly change between NUTS 2 and NUTS 3 level. Both values are true, but the value at NUTS 3 level should be considered as the less distorting. For example, the percentage of territory (indicator Context 2) in rural areas for EU27 is 54.4% at NUTS 3 level, but only 37.6% at NUTS 2 level for 2006. For consistency of the analysis, the indicators should be compared at the same level.

For the elaboration of this report, the NUTS classification revised in 2006 which came into force on 1 January 2008 has been used for the first time³⁵. This new version of NUTS has affected several countries at different NUTS level (see table at Annex 3.A). An important number of regional series has not been updated to this change, and the availability of time series data -especially at NUTS 3 level- has been reduced. In any case, the regions excluded from the calculations are shown in the summary table of every indicator constructed from regional data.

Tables providing the data for every particular NUTS2 and NUTS3 region are to be found for all the indicators on the CD-ROM and in Annex 3.D for the Lead baseline indicators. Indicators are then organised after the CMEF order.

4. Where possible and relevant, time series have been elaborated. Depending on the indicator, a simple growth or an annual average growth rate have been calculated.

- The simple growth is calculated as: value in year T+N – value in year T

- The average annual growth rate measures the compound annual average increase or reduction, as a percentage, of the variable concerned from a base year (T in the following equation). It is calculated as:

$100 \times \text{Anti-Log} [\text{Log} ((\text{Statistic for year T+N}) / (\text{Statistic for year T})) / N] - 100$

It should be also noted that concerning economic data expressed in Euros, time series are calculated at constant prices, whereas data for the latest year available are presented at current prices. As values at constant prices are not available at regional level, they have been estimated using national price index of the corresponding aggregate.

5. Additional warnings concerning the presentation of the data

In this report, the choice has been made to provide as much information as possible to give a broad overview of the agri-food sector and of the situation of the environment and of rural areas. Some "difficult" choices have been made in this context that the reader should be aware of:

- The tables provide information for a "central year" at EU-27 level, i.e. the most recent year for which data were available for most of the Member States. In some cases, data are provided for a different year for some Member States or regions.
- For some indicators, information comes from different sources at national and at regional level. Very often the updates or revisions/corrections of the data are not made at the same time in the national and in the regional series. This may explain why occasionally the sum of the regions does not correspond to the national figure. Indeed, when different sources are used, the national results provided in the tables are based on the series at national level (rather than on the sum of the regional data from regional statistics).

³⁵ See Regulation No 176/2008 of the European Parliament and of the Council 20 February 2008.

- In some cases, data are not available for some regions of a Member State. In spite of that, it has been decided, when the effect was considered as limited, to provide tables according to the rural character of regions based on the data available. In some cases (different years at national and regional level, large discrepancies reflecting differences in updates, not homogeneous coverage at national and regional level, etc) the national summary based on the regional results is also provided to allow evaluating the difference with the national figure.
6. The following documents are also available
- Correspondence table between the NUTS level and the national administrative units
 - Correspondence table between country codes and country names
 - Localisation maps of the NUTS codes by country, at NUTS 2 & NUTS 3 level (CD ROM)
 - Glossary of terms: Annex 3.A

Indicators for Rural Development report				
Section	CMEF	Indicator	N°	Measurement
3.1 Importance of rural areas	C1	Designation of rural areas	3.1.1	Designation of rural areas with OECD methodology
	C2	Importance of rural areas	3.1.2.1	% territory in rural areas
			3.1.2.2	% population in rural areas
			3.1.2.3	% GVA in rural areas
			3.1.2.4	% employment in rural areas
3.2 Socio-economic situation in rural areas	C17	Population density	3.2.1	Population density
	C18	Age structure	3.2.2	% people aged (0-14) y.o. / (15-64) y.o. / >= 65 y.o. in total population
	O1	Economic development	3.2.3	GDP/capita (EU-25 = 100)
	C19	Structure of the Economy	3.2.4	% GVA by branch (Primary / Secondary / Tertiary sector)
	C20	Structure of Employment	3.2.5	% employment by branch (Primary / Secondary / Tertiary sector)
	O2	Employment rate	3.2.6	Employed persons as a share of total population of the same age class
	O3	Unemployment	3.2.7	Rate of unemployment (% active population)
	C21	Long-term unemployment	3.2.8	% Long-term unemployment (as a share of active population)
3.3 Sectoral economic indicators	O8	Employment development of primary sector	3.3.1	Employment in primary sector
	O9	Economic development of primary sector	3.3.2	GVA in primary sector
	C3	Agricultural land use	3.3.3	% arable area / permanent grass / permanent crops
	C4	Farm structure	3.3.4.1	Number of farms
			3.3.4.2	Utilized agricultural area
			3.3.4.3	Average area farm size and distribution
			3.3.4.4	Average economic farm size and distribution
			3.3.4.5	Labour Force
	O16	Importance of semi-subsistence farming in NMS	3.3.5	Number of farms < 1 ESU
	O4	Training and education in agriculture	3.3.6	% farmers with basic and full education attained
	O5	Age structure in agriculture	3.3.7	Ratio : % farmers < 35 / >= 55 years old
	O6	Labour productivity in agriculture	3.3.8	GVA / AWU - total and by sector.
	O7	Gross fixed capital formation in agriculture	3.3.9	GFCF in agriculture
	O10	Labour productivity in food industry	3.3.10	GVA /person employed in food industry
	O11	Gross fixed capital formation in food industry	3.3.11	GFCF in food industry
	O12	Employment development in food industry	3.3.12	Employment in food industry
	O13	Economic development of food industry	3.3.13	GVA in food industry
	C5	Forestry structure	3.3.14.1	Area of forest available for wood supply (FAWS)
3.3.14.2			Ownership (% area of FAWS under "eligible" ownership)	
3.3.14.3			Average size of private holding (FOWL)	
C6	Forest productivity	3.3.15	Average net annual volume increment (FAWS)	
O14	Labour productivity in forestry	3.3.16	GVA /person employed in forestry	
O15	Gross fixed capital formation in forestry	3.3.17	GFCF in forestry	
3.4 Environment	C7	Land cover	3.4.1	% area in agricultural / forest / natural / artificial
	C8	LFA	3.4.2	% UAA in non LFA / LFA mountain / other LFA / LFA with specific handicaps
	C9	Areas of extensive agriculture	3.4.3.1	% UAA for extensive arable crops
			3.4.3.2	% UAA for extensive grazing
			3.4.4.1	% territory under Natura 2000
	C10	Natura 2000 area	3.4.4.2	% UAA under Natura 2000
			3.4.4.3	% forest area under Natura 2000
			3.4.5	Trends of index of population of farmland birds
	O17	Biodiversity: Population of farmland birds	3.4.6	UAA of High Nature Value Farmland areas
	O18	Biodiversity: High Nature Value farmland areas	3.4.7	Distribution of species group by area of FOWL (% coniferous/% broadleaved/%mixed)
	O19	Biodiversity: Tree species composition	3.4.8	% FOWL protected to conserve biodiversity, landscapes and specific natural elements (MCPFE 4.9, classes 1.1, 1.2, 1.3 & 2)
	C11	Biodiversity: Protected forest	3.4.9	Average annual increase of forest and other wooded land areas
	C12	Development of forest area	3.4.10	% trees / conifers / broadleaved in defoliation classes 2-4
	C13	Forest ecosystem health	3.4.11	% territory designated as Nitrate Vulnerable Zone
	C14	Water quality	3.4.12.1	Surplus of nitrogen in kg/ha
	O20	Water quality: Gross Nutrient Balances	3.4.12.2	Surplus of phosphorus in kg/ha
	O21	Water quality: Pollution by nitrates and pesticides	3.4.13.1	Annual trends in the concentrations of nitrate in ground and surface waters
			3.4.13.2	Annual trends in the concentrations of pesticides in ground and surface waters
C15	Water use	3.4.14	% irrigated UAA	
C16	Protective forests concerning primarily soil and water	3.4.15	FOWL area managed primarily for soil & water protection (MCPFE 5.1 class 3.1)	
O22	Soil: Areas at risk of soil erosion	3.4.16	Areas at risk of soil erosion (classes of T/ha/year)	
O23	Soil: Organic farming	3.4.17	UAA under organic farming	
O24	Climate change: Production of renewable energy from agriculture and forestry	3.4.18.1	Production of renewable energy from agriculture (ktoe)	
		3.4.18.2	Production of renewable energy from forestry (ktoe)	
O25	Climate change: UAA devoted to renewable energy	3.4.19	UAA devoted to energy and biomass crops	
O26	Climate change: GHG emissions from agriculture	3.4.20	Agricultural emissions of GHG (ktons of CO2 eq.)	
3.5 Diversification and quality of life in the different categories of areas (OECD)	O27	Farmers with other gainful activity	3.5.1	% holders with other gainful activity
	O28	Employment development of non-agricultural sector	3.5.2	Employment in secondary and tertiary sectors
	O29	Economic development of non-agricultural sector	3.5.3	GVA in secondary and tertiary sectors
	O30	Self-employment development	3.5.4	Self-employed persons
	O31	Tourism infrastructure in rural area	3.5.5	Number of bedplaces (in hotels, campings, holiday dwellings, etc)
	C23	Internet infrastructure	3.5.6	DSL coverage
	O32	Internet take-up in rural areas	3.5.7	% population having subscribed to DSL internet
	O33	Development of services sector	3.5.8	% GVA in services
	O34	Net migration	3.5.9	Net migration rate
	C22	Educational attainment	3.5.10	% adults (25_64) with Medium & High educational attainment
O35	Life-long learning in rural areas	3.5.11	% of population of adults participating in education and training	
AXIS 4, LEADER	O36	Development of Local Action Groups	3.5.12	Share of population covered by Local Action Groups

Romania	64.5	58.2	62.7	62.2	58.8
Slovenia	68.7	71.1		69.8	67.8
Slovakia		59.4	71.9	60.9	60.7
Finland	68.3	74.2		71.3	70.3
Sweden				0.0	74.2
United Kingdom	78.4	74.7	72.2	73.1	71.5
EU27	64.8	65.5	68.2	66.5	65.4
EU15	68.6	67.0	68.8	67.9	67.0
EU12	60.7	61.1	62.9	61.3	n.a.

Notes:

- The regional total for France and therefore the European aggregates include the overseas departments, which is not the case of the Structural Indicator.
- There might be some differences between employment rate as for structural indicators and data available in regional series, due to the use of different series (DE), rounding, or different pace of update.

Table 3.2.6.ii

4.55	4.09	3.66	3.92	excl. DK	3.6
-3.74	0.61	3.75	-0.10	excl. BG, SI	n.a.

Notes:

- The following regions are excluded from the national totals and therefore from the EU aggregates: for DE Brandenburg-Berlin, Rheinland Pfalz and Sachsen-Anhalt, for FR the overseas departments and for UK part of Scotland

Graph 3.2.6

Note:

- BG, DK, SI and Scotland are not included
- The important reduction in 2002 is partially explained by the drastic fall in Romania, which passed from 62% in 2001 to 57% in 2003

Illustration 3.4.6

Note: the estimated share of HNV for each NUTS 2 area in the EU 27 was calculated according to the methodology described in

http://agrienv.jrc.it/publications/pdfs/HNV_Final_Report.pdf

The values presented are calculated as share of total farmland; in order to compare data holding similar level of detail the latter is derived from the CORINE agricultural classes (the 11 'agricultural' classes of Corine level 3 and parts of class 3.2.1 'natural grasslands') plus semi-natural classes when belonging to the HNV farmland category.

Further refinements on the basis of national datasets would be desirable (e.g. for Southern Finland and Slovakia). Malta was not mapped because of lack of data holding the necessary detail.

The IRENA methodology provides area estimates of the share of HNV farmland per Member State on the basis of information derived from land cover and FADN data. The table above is based on land cover only, FADN data will be added in future updates of the IRENA indicator data sets. Further information can be found under:

<http://eea.eionet.europa.eu/>

Notes on table 3.4.11:

- Implementation of an Action Programme on the whole territory; this does not necessarily mean that the whole territory is nitrate vulnerable according to paragraph 2 of Article 3 of the Nitrates Directive
- EU15: Based on information made available to the Commission in digital form. The estimate of designated area does not include some designations communicated in paper form only

Nitrate Vulnerable Zone designation EU 27 year 2009 including designation of whole territory of some Member States

Designated nitrates vulnerable zones after 2003 are based on information made available to the Commission in digital form. The estimate of designated area does not include some designations communicated in paper form only.

Data reported in 2009 are not included in the EU level dataset.

Implementation of an Action Programme on the whole territory; this does not necessarily mean that the whole territory is nitrate vulnerable according to paragraph 2 of Article 3 of the Nitrates Directive

Notes:

- The delimitation of areas is different from the OECD definition:

- rural: < 100 hab./km²- suburban: 100 to 500 hab./km²- urban: > 500 hab./km²

- Some small negative changes may be due to sampling problems.

Notes:

-the indicator has been elaborated with the data submitted by the Member States by November 2009

-it shows the % of population from Rural areas (both PR and IR) which are covered by LEADER LAG'S

-for BG, DK, IT, NL and UK the data of total population living in LAGs areas refers to the data submitted in the previous year

Graph 3.5.12

Notes:

- No data available for DE; not completed for LV and as for MT, not significant.
- The data from BG, DK, IT, NL and UK refer to 2008

ANNEXES

ANNEX 3.A - Glossary of Terms & Definitions

Annual Work Unit (AWU):	Unit of measurement of labour force in agriculture. An Annual Work Unit is equivalent to a full-time employment. One AWU corresponds to the work performed by a person undertaking fulltime agricultural work on the holding over a 12 month period. The yearly working time of such worker is 1800 hours (225 working days of 8 hours per day), unless national provisions governing contracts of employment are specified. As the volume of agricultural labour is being calculated on the basis of fulltime equivalent jobs, no one person can therefore represent more than one AWU. This constraint holds even if it is known that someone is working on agricultural activities for more than the number of hours defining full-time in the Member State concerned.
Baseline indicators	Baseline indicators reflect the state of the economic, social or environmental situation, at a given time (generally at the beginning of the intervention). Baseline indicators are used in the SWOT analysis and the definition of the programme strategy. They fall into two categories: 1) <i>Objective related baseline indicators</i> . These are directly linked to the wider objectives of the programme. They are used to develop the SWOT analysis in relation to objectives identified in the regulation. They are also used as a baseline (or reference) against which the programmes' impact will be assessed. 2) <i>Context related baseline indicators</i> . These provide information on relevant aspects of the general contextual trends that are likely to have an influence on the performance of the programme. The context baseline indicators therefore serve two purposes: (i) contributing to identification of strengths and weaknesses within the region and (ii) helping to interpret impacts achieved within the programme in light of the general economic, social, structural or environmental trends.
CORINE Land Cover (CLC):	See Annex 3.B.
Economic Size (of an agricultural holding):	It represents the potential gross value added of the holding. The concept has been developed in the Community typology for agricultural holdings (Commission decision 85/377/EEC) that is applied in Farm Structure Surveys of Eurostat and in Farm Accounting Data Network of EC. It is obtained by multiplying, for each enterprise on the farm, the relevant gross margin (calculated as a multi-annual average at regional level and named standard gross margin) by the area (crops) or the livestock (animal productions). The total standard gross margin of the holding, expressed in euros, is then converted in European Standard Unit (1 ESU = 1,200 € SGM) and evaluates its economic size.
European Size Unit (ESU):	Unit of measurement of the economic size of an agricultural holding: 1 ESU = 1,200 € of Standard Gross Margin of the holding (Community typology for agricultural holdings -Commission decision 85/377/EEC).
European System of Accounts (ESA):	In the European Union, annual national accounts are compiled in accordance with the European System of Accounts: ESA 1995 (Council Regulation 2223/96 of 25.06.1996, OJ L310 of 30.11.1996). Some changes will be applied from Economic Accounts for 2005.
Farm Accountancy Data Network (FADN):	See Annex 3.B.

Full-Time Equivalent Employment (FTE):

Full-time equivalent units are used to improve the comparability of measures of employment. Figures for the number of persons working less than the standard working time of a full-year full-time worker, should be converted into full time equivalents, with regard to the working time of a full-time full-year employee in the unit. Included in this category are people working less than a standard working day, less than the standard number of working days in the week, or less than the standard number of weeks/months in the year. The conversion should be carried out on the basis of the number of hours, days, weeks or months worked.

Green House Gases (GHG):

The 'greenhouse effect' is the term commonly used to describe the natural process through which atmosphere gases absorb and re-radiate infrared radiation from the earth's surface, and which is largely responsible for life on earth. It is generally accepted that human activities as the combustion of fossil fuels are altering the composition of gases in the atmosphere, which could cause heat that would normally be radiated out to be retained. There is indeed mounting evidence that emissions of greenhouse gases are causing global and European surface air temperature increases, resulting in climate change. Like any other economic sector the agriculture sector produces greenhouse gases, and is a major source of the non-CO₂ greenhouse gases methane and nitrous oxide. Both of these gases are many times more powerful greenhouse gases than CO₂. Greenhouse gases include CO₂, CH₄, N₂O and fluorinated gases (HFCs, PFCs and SF6).

Gross Domestic Product (GDP):

The concept is used in the European System of Accounts. GDP at market prices -is the final result of the production activity of resident producer units (ESA 1995, 8.89). GDP is the total market value of all the goods and services produced within the borders of a nation (or region) during a specified period.

It can be defined in three ways:

a. Output approach

GDP is the sum of gross value added of the various institutional sectors or the various industries plus taxes and less subsidies on products (which are not allocated to sectors and industries). It is also the balancing item in the total economy production account.

b. Expenditure approach

GDP is the sum of final uses of goods and services by resident institutional units (final consumption expenditure and gross capital formation), plus exports and minus imports of goods and services.

c. Income approach

GDP is the sum of uses in the total economy generation of income account: compensation of employees, taxes on production and imports less subsidies, gross operating surplus and mixed income of the total economy.

Gross Fixed Capital Formation (GFCF):

The concept is used in the European System of Accounts. Gross fixed capital formation (ESA 1995, 3.102) consists of resident's product acquisitions, less disposals, of fixed assets during a given period plus certain additions to the value of non-produced assets realised by the productive activity of producer or institutional units. Fixed assets are tangible or intangible assets produced as outputs from processes of production that are themselves used repeatedly, or continuously, in processes of production for more than one year. Disposals of fixed assets are treated as negative acquisitions.

Gross Value Added (GVA):	The concept is used in the European System of Accounts. Gross Value Added (ESA 1995, 8.11) is the net result of output valued at basic prices less intermediate consumption valued at purchasers' prices. Gross value added is calculated before consumption of fixed capital. It is equal to the difference between output (ESA 1995, 3.14) and intermediate consumption (ESA 1995, 3.69).
Holder (of an agricultural holding):	In Community Farm Structure Surveys (Commission Decision 2000/115/EC of 24.11.1999, OJ L38 of 12.02.2000 p.1), the holder of the holding is that natural person, group of natural persons or the legal person on whose account and in whose name the holding is operated and who is legally and economically responsible for the holding, i.e. who takes the economic risks of the holding. The holder can own the holding outright or rent it or be a hereditary long term leaseholder or a usufructuary or a trustee. All partners on a group holding who take part in the farm work on the holding are considered as being as holders. The legal and economic responsibility is defined according to Member States' documented own rules. The holder may have delegated all or part of power of decision of the normal daily financial and production routines of running of the holding to a manager. In the case of share farming (see item C/03 (a)) the share farmer is shown as holder and not the landlord.
ICP Forest	International Co-operative Programme on the Assessment and Monitoring of Air Pollution Effects on Forests (ICP Forests).
Labour Force Survey (LFS)	See Annex 3.B.
Manager (of an agricultural holding):	In Community Farm Structure Surveys (Commission Decision 2000/115/EC of 24.11.1999, OJ L38 of 12.02.2000 p.1), the natural person or persons responsible for the normal daily financial and production routines of running the holding concerned. The manager is generally, but not always, the same person as the holder who is a natural person. As managers of a group holding are taken those partners of the holding taking part in the farm work on the holding. In cases where the holder is not also the manager he/she has charged or employed someone else with the running of the holding. This could be for example a member of his/her family or his/her spouse, but can also be a person with no family ties to the holder.
Natura 2000:	Natura 2000 is the centrepiece of EU nature & biodiversity policy. It is an EUwide network of nature protection areas established under the 1992 Habitats Directive. The aim of the network is to assure the long-term survival of Europe's most valuable and threatened species and habitats. It is comprised of Special Areas of Conservation (SAC) designated by Member States under the Habitats Directive (Council Directive 92/43/EEC of 21.05.1992), and also incorporates Special Protection Areas (SPAs) which they designate under the 1979 Birds Directive (Council Directive 79/409/EEC of 2.04.1979). The establishment of this network of protected areas also fulfils a Community obligation under the UN Convention on Biological Diversity.

Nomenclature of territorial units for statistics (NUTS):

The NUTS nomenclature serves as a reference for the collection, development and harmonization of EU regional statistics and for socio-economic analyses of the regions. Legal basis is Regulation (EC) No 176/2008 of the European Parliament and of the Council of 20 February 2008 on the establishment of a common classification of territorial units for statistics (NUTS), OJ L 061 of 05.03.2008).

Structure:

- *Level 0: 27 countries*
- *Level 1: 97 regions*
- *Level 2: 271 regions*
- *Level 3: 1303 regions*

N.B. At a more detailed level, there are the districts and municipalities. These are called "Local Administrative Units" (LAU) and are not subject of the NUTS Regulation.

In FSS up to survey 2003 and in FADN, specific regions are used, based on different levels of NUTS or recombination of NUTS.

Nomenclature statistique des Activités économiques dans la Communauté Européenne" (NACE):

NACE (Statistical classification of economic activities in the European Community) was adopted in order to establish a common statistical classification of economic activities within the European Community in order to ensure comparability between national and community classifications and hence national and community statistics.

Current version is NACE Rev. 1.1 corresponding to ISIC Rev.3 (of United Nations) at European level. Though more disaggregated than ISIC Rev.3.1, NACE Rev.1.1 is totally in line with it and can thus be regarded as its European counterpart. Since the national economic structures vary considerably, there are branches of industry in NACE Rev. 1.1 which are not of importance or do not occur in all Member States (e.g. branches of mining and quarrying, manufacture of spacecraft, etc.). The NACE Rev. 1.1 Regulation allows the Member States to use a national version derived from NACE Rev. 1.1 for national purposes. Such national versions must, however, fit into the structural and hierarchical framework laid down by NACE Rev. 1.1.

Structure:

- *Level 1: 17 sections identified by alphabetical letters A to Q;*
- *intermediate level: 31 sub-sections identified by two-character alphabetical codes;*
- *Level 2: 62 divisions identified by two-digit numerical codes (01 to 99);*
- *Level 3: 224 groups identified by three-digit numerical codes (01.1 to 99.0);*
- *Level 4: 514 classes identified by four-digit numerical codes (01.11 to 99.00).*

Purchasing Power Standard (PPS):

Purchasing Power Standard (PPS) shall mean the artificial common reference currency unit used in the European Union to express the volume of economic aggregates for the purpose of spatial comparisons in such a way that price level differences between countries are eliminated. Economic volume aggregates in PPS are obtained by dividing their original value in national currency units by the respective PPP. 1 PPS thus buys the same given volume of goods and services in all countries, whereas different amounts of national currency units are needed to buy this same volume of goods and services in individual countries, depending on the price level.

Sectors primary / secondary / tertiary:	<p>Specific grouping of economic activities of NACE rev 1.1:</p> <p>Primary sector covers divisions 01 to 05 or branches A (Agriculture, hunting and forestry) & B (fishing)</p> <p>Secondary sector covers divisions 10 to 45 or branches C to F (Mining and quarrying, Manufacturing, Electricity, gas and water supply, Construction)</p> <p>Tertiary sector covers divisions 50 to 95 or branches G to P (private and public services). In Labour Force Survey it also covers branch Q (Extra-territorial organizations and bodies).</p> <p>N.B.: In some statistical series, it is possible to restrict the primary sector to division 01 and 02 or branch A of NACE rev. 1.1 (Agriculture, hunting and forestry).</p> <p>See also Type of Farming of an agricultural holding.</p>
Special Areas of Conservation (SAC):	<p>Areas designated under the Habitats Directive (Council Directive 92/43/EEC of 21 May 1992) to be part of NATURA 2000 network of nature protection areas.</p>
Special Protection Areas (SPA):	<p>Areas designated by Member States under the Birds Directive (Council Directive 79/409/EEC of 2 April 1979) to be part of NATURA 2000 network of nature protection areas.</p>
Standard Gross Margin (SGM) of an enterprise:	<p>The concept has been developed in the Community typology for agricultural holdings (Commission decision 85/377/EEC). The SGM is the balance between the standard value of output and the standard value of certain direct costs, i.e. by convention the proportional (variable) costs which can easily be allocated to this output. The SGM is an economic criterion expressed in monetary terms, either per hectare of utilised agricultural area in the case of crop enterprises or per head of livestock in the case of livestock farming. The Member States calculate regional SGM coefficients for each enterprise as average values over the reference period.</p>
Type of Farming (TF) of an agricultural holding:	<p>The concept has been developed in the Community typology for agricultural holdings (Commission decision 85/377/EEC). The type of farming on a holding is the production system of a holding which is characterised by the relative contribution of different enterprises to the holding's total standard gross margin. Depending on the amount of detail required, there are three nested levels of type of farming: 9 <i>general types</i>, 17 <i>principal types</i> and 50 <i>particular types</i>.</p>
UNECE:	<p>United Nations Economic Commission for Europe</p>
Utilised Agricultural Area (UAA):	<p>In Community farm structure surveys (FSS), the Utilised Agricultural Area is defined as the total of arable land, permanent pastures and meadows, land use for permanent crops and kitchen gardens (Council Regulation 571/88 of 29.02.1988, OJ L56 of 2.03.1988 p.3). The UAA excludes unutilised agricultural land, woodland and land occupied by buildings, farmyards, tracks, ponds, etc.</p>

ANNEX 3.B - Main Sources

- **CORINE Land Cover.**

The Corine Land Cover project was adopted by the European Commission in 1985 (Directorate General "Environment") then managed by the European Topic Centre of the European Environment Agency in 1993.

The aim of Corine Land Cover is to provide information on land cover and on the state of the environment in the European Union. Corine Land Cover is a cartographic tool which covers every national territory where the survey is undertaken.

CORINE Land Cover databases are obtained through computer assisted interpretation of satellite images acquired in 1990 and 2000, offering the possibility to describe the geographic distribution of specific land cover changes in a geo-referenced approach.

CORINE land cover (CLC) describes land cover (and partly land use) with a three-level nomenclature of 44 classes. CLC was elaborated based on the visual interpretation of satellite images (Spot, Landsat TM and MSS). Ancillary data (aerial photographs, topographic or vegetation maps, statistics, local knowledge) is used to refine interpretation and assign classes. The CLC database is based on a standard production methodology characterised by the following elements: Mapping scale is 1:100 000. Mapping accuracy is 100 m. The minimum mapping unit for the inventory is 25 ha for areas, and 100 m for linear elements.

Website of Corine Land Cover is:

<http://dataservice.eea.eu.int/dataservice/available2.asp?type=findkeyword&theme=clc2000>

- **Farm Accountancy Data Network (FADN)**

The concept of the FADN was launched in 1965, when Council Regulation 79/65 established the legal basis for the organisation of the network. It consists of an annual survey carried out by the Member States of the European Union. The services responsible in the Union for the operation of the FADN collect every year accountancy data from a sample of the agricultural holdings in the European Union. Derived from national surveys, the FADN is the only source of micro-economic data that is harmonised, i.e. the bookkeeping principles are the same in all countries. Holdings are selected to take part in the survey on the basis of sampling plans established at the level of each region in the Union. The survey does not cover all the agricultural holdings in the Union but only those which due to their size could be considered commercial. The methodology applied aims to provide representative data along three dimensions: region, economic size and type of farming. While the European Commission is the primary user of analyses based on FADN-data, aggregated data can be found in the Standard Results database.

Website of FADN is: http://europa.eu.int/comm/agriculture/rica/dwh/index_en.cfm

- **Farm Structure Survey (FSS)**

The purpose of the Community surveys on the structure of agricultural holdings, also referred to as farm structure surveys (FSS), is to obtain reliable data, at regular intervals, on the structure of agricultural holdings in the European Union, in particular on land use, livestock and labour force. It was first conducted in 1966-67. FSS are carried out at intervals of two to three years. Approximately every ten years, a full scope is carried out in the form of an agricultural census. They usually contain more extensive information than those in the mid-term years, particularly regarding labour data. From 1975, results were held on a computer databank in the form of standard tables. Since survey 1990, individual (micro) data are transmitted to Eurostat and stored in a new database (Eurofarm).

Data are available at country level, standard region and district level (for intermediate surveys, only for MS carrying on a census). The results are published 2 to 3 years after the reference year of the survey.

Data is disseminated through hard copy publication, New Cronos, and on request.

Website of Eurostat is:

http://epp.eurostat.ec.europa.eu/portal/page?_pageid=1090,1&_dad=portal&_schema=PORTAL

- **IRENA project.**

DG Agriculture, DG Environment, DG Eurostat and DG Joint Research Centre have agreed to pool skills and resources with the European Environment Agency to assess the integration of the environment into the Common Agricultural Policy (CAP) and in particular to develop indicators to monitor such integration, i.e. agri-environmental indicators (AEI), through the project known as IRENA (Indicator Reporting on the Integration of Environmental Concerns into Agriculture Policy).

The purpose of the IRENA project is to compile and develop a set of agri-environmental indicators, to provide related databases at the appropriate geographical level, and to produce an indicator-based assessment of the integration of environmental concerns into EU agricultural policy. The data sets contain aggregated data, typically on a country level, with geographical coverage of at least the 15 EU Member States. The data can be found on the website of the European Environment Agency.

Website of IRENA is: <http://www.eea.europa.eu/projects/irena>

- **Labour Force Survey (LFS)**

The Labour Force Survey (LFS) is a quarterly sample survey of households living at private addresses. Its purpose is to provide information on the labour market that can then be used to develop, manage, evaluate and report on labour market policies.

The survey seeks information on respondents' personal circumstances and their labour market status during a specific reference period, normally a period of one week or four weeks (depending on the topic) immediately prior to the interview.

The LFS is carried out under a European Union Directive and uses internationally agreed concepts and definitions. It is the source of the internationally comparable (International Labour Organisation) measure known as 'ILO unemployment'. Data can be found on the Eurostat website.

Website of Eurostat is:

http://epp.eurostat.ec.europa.eu/portal/page?_pageid=1090,1&_dad=portal&_schema=PORTAL

- **National Accounts of European System of Accounts (ESA)**

National Accounts are compiled in accordance with the European System of Accounts ([ESA 1995](#)) adopted in the form of a Council Regulation dated 25 June 1996, N° 2223/96 and originally published in the Official Journal L310 of the 30/11/1996.

Data are provided by the National Statistical Institutes' Accounts Departments. Data come from many sources, including administrative data from government, censuses, and surveys of businesses and households. Sources vary from country to country and may cover a large set of economic, social, financial and environmental items, which need not always be strictly related to National Accounts. In any case, there is no one single survey source for National Accounts.

The periods referred to are years. Data cover the period from 1995 to the actual calendar year minus 2.

Data are disseminated simultaneously to all interested parties through a database update and on Eurostat website (see “Dissemination formats” below for more details).

National data are published by the National Statistical Institutes (NSI) following national dissemination calendars.

Website of Eurostat is:

http://epp.eurostat.ec.europa.eu/portal/page?_pageid=1090,1&_dad=portal&_schema=PORTAL

- ***Temperate and Boreal Forest Resources Assessment (TBFRA)***

The Temperate and Boreal Forest Resources Assessment (TBFRA) 2000, is the latest in a series of surveys of the temperate and boreal countries carried out every ten years by ECE and FAO. TBFRA 2000 is a part of the global Forest Resources Assessment (FRA) process led by the FAO Forestry Department.

Based on the expert knowledge of country correspondents in all European countries, the Report Forest Resources of Europe, CIS, North America, Australia, Japan and New Zealand (TBFRA-2000) presents the most recent and the best possible information on the forest resources of the fifty-five industrialized temperate/boreal countries (including the whole ECE region, meaning the EU Member States, the other EEA countries, Switzerland and the candidate countries), covering practically all aspects and functions of the forest. It presents validated national statistical data, adjusted to the TBFRA standards, graphs, tabular and textual information and analysis in the following specific thematic areas: areas of forest and other wooded land, ownership and management status, wood supply and carbon sequestration, biological diversity and environmental protection, forest condition and damage, and protective and socioeconomic functions.

Website of TBFRA is: <http://www.unece.org/trade/timber/fra>

Based on these efforts, the Ministerial Conference on the Protection of Forests in Europe (MCPFE) and UNECE/FAO have joined forces to develop a comprehensive report (State of Europe’s forests 2007) about the state of sustainable forest management in Europe in the period 1990-2005. The report was prepared for the fifth Ministerial Conference on the Protection of Forests in Europe (MCPFE) in 2007, held in Warsaw, Poland. This assessment is structured according to the improved Pan-European Criteria and Indicators for Sustainable Forest Management as endorsed at the Fourth Ministerial Conference in 2003, held in Vienna, Austria and includes, for the first time, qualitative indicators on policies and institutions. Those documents are available at: <http://www.mcpfe.org>

The Global Forest Resource Assessment (FRA 2005) has been released in early 2006.

The above mentioned reports as well as TBFRA 2000 database are available at the website of the UNECE: <http://www.unece.org/trade/timber/>

ANNEX 3.C - Technical Annex

Objective related Baseline Indicators

HORIZONTAL

Baseline indicator objective related	1 - Economic development
Measurement of the indicator	GDP per capita, expressed in PPS, as % of EU-27 = 100, three year average
Definition of the indicator	<p>One of the main criteria for economic development is Gross Domestic Product (GDP). GDP is the total market value of all the goods and services produced within the borders of a nation (or region) during a specified period.</p> <p>In order to be able to compare the economic strength of regions a relative indicator is needed. For this purpose GDP will be calculated in purchasing power standards (pps) per capita as a percentage of the EU average.</p> <p>A three year average mitigates the short-term fluctuations. Economic development is then calculated as the ratio of the averages: (three year average GDP) / (three year average population), and further expressed as a percentage of the three year EU average.</p>
Unit of measurement	PPS / capita (purchasing power standards per capita) EU-27=100
Source	Eurostat – Economic accounts (ESA95)

Baseline indicator objective related	2 - Employment rate
Measurement of the indicator	Employed persons aged 15-64 as a percentage of the population of the same age group.
Definition of the indicator	<p>In Labour Force Surveys:</p> <ul style="list-style-type: none"> • Employed persons are all persons aged 15 and over who, during the reference week, worked at least one hour for pay or profit or were temporarily absent from such work. Employed persons comprise employees, self-employed and family workers. • Population covers persons aged 15 and over, living in private households (population living in public households are not included). This comprises all persons living in the households surveyed during the reference week. This definition also includes persons absent from the households for short periods (but having retained a link with the private household) owing to studies, holidays, illness, business trips, etc... Persons on compulsory military service are not included.
Unit of measurement	%
Source	Eurostat - Labour Force Survey

Baseline indicator objective related	3 - Unemployment
Measurement of the indicator	Rate of unemployment i.e. unemployed persons as a percentage of economically active population
Definition of the indicator	Unemployed persons comprise persons aged 15-74 who were (all three conditions must be fulfilled simultaneously): 1. without work during the reference week 2. available for work at the time 3. actively seeking work Economically active population is employed plus unemployed.
Unit of measurement	%

AXIS 1	IMPROVING THE COMPETITIVENESS OF THE AGRICULTURAL AND FORESTRY SECTOR
---------------	--

Baseline indicator objective related	4 - Training and education in agriculture
Measurement of the indicator	% farmers with basic or full education in agriculture attained
Definition of the indicator	This indicator provides information on the education level of managers within a region. This indicator covers managers that have attained basic or full agricultural training. According to the Commission Decision of 24 November 1999 relating to the definitions of the characteristics, the list of agricultural products, the exceptions to the definitions and the regions and districts regarding the surveys on the structure of agricultural holdings(notified under document number C(1999) 3875) (2000/115/EC), the <u>Manager's</u> agricultural training is defined as follows: <u>Only practical agricultural experience</u> : experience acquired through practical work on an agricultural holding. <u>Basic agricultural training</u> : any training courses completed at a general agricultural college and/or an institution specialising in certain subjects (including horticulture, viticulture, silviculture, pisciculture, veterinary science, agricultural technology and associated subjects). A completed agricultural apprenticeship is regarded as basic training. <u>Full agricultural training</u> : any training course continuing for the equivalent of at least two years full time training after the end of compulsory education and completed at an agricultural college, university or other institute of higher education in agriculture, horticulture, viticulture, silviculture, pisciculture, veterinary science, agricultural technology or an associated subject.
Unit of measurement	%
Source	Eurostat – Farm Structure Survey 2007

Baseline indicator objective related	5 - Age structure in agriculture
Measurement of the indicator	Ratio between percentage of farmers less than 35 years old and percentage of farmers of 55 years old or more
Definition of the indicator	The indicator only covers farms where the holder is a natural person. For the age structure, two groups are distinguished: <ul style="list-style-type: none"> • Holders < 35 years; • Holders >55 years.
Unit of measurement	%
Source	Eurostat – Farm Structure Survey 2007

Baseline indicator objective related	6 - Labour productivity in agriculture
Measurement of the indicator	Gross Value Added per annual work unit (GVA/AWU)
Definition of the indicator	<p><u>Labour productivity in agriculture</u> is expressed in Gross Value Added at basic price (GVA) per annual work unit (AWU).</p> <p>GVA is defined as the value of output less the value of intermediate consumption.</p> <p>Output is valued at basic prices, GVA is valued at basic prices and intermediate consumption is valued at purchasers' prices.</p> <p><u>GVA per Annual Work Unit</u> (AWU) provides comparable data on labour productivity and allows for comparison over the sub-sectors and regions.</p> <p>When data availability makes it possible, a three year average mitigates the short-term fluctuations. Labour productivity is then calculated as the ratio of the averages: (three year average GVA) / (three year average labour force).</p> <p>The agricultural sector corresponds to division 01 of NACE rev. 1.1 (Agriculture, hunting and related service activities).</p> <p>In the Economic Accounts for Agriculture, there are the following differences:</p> <ul style="list-style-type: none"> - <i>inclusion</i> of the production of wine and olive oil (exclusively using grapes and olives grown by the same holding), the growing of vegetable materials used for plaiting, Christmas trees, fruit trees, vines and ornamental nursery trees, - <i>exclusion</i> of the activities relating to the production of seeds upstream and downstream of multiplication and certain activities which, in NACE Rev. 1, are considered as agricultural services (i.e. the operation of irrigation systems, the design, planting and maintenance of gardens, parks and green areas for sports facilities and the like, tree pruning and hedge trimming; only agricultural contract work is taken into account here). <p>Sub-sectors correspond to specialised Types of Farms defined in the Community typology for agricultural holdings (Commission Decision 85/377/EEC)</p>
Sub-indicators	<p>Labour productivity in field crops (TF1 of Community typology for agricultural holdings)</p> <p>Labour productivity in horticulture (TF2)</p> <p>Labour productivity in permanent crops (TF3)</p> <p>Labour productivity in grazing livestock (TF4)</p>

	Labour productivity in granivores (TF5)
Unit of measurement	Thousand Euro/AWU Eventually with Index (EU 25 = 100) at national level
Source	<u>At national level:</u> Eurostat - Economic Accounts for Agriculture & Agricultural Labour Input Statistics <u>At regional level:</u> Eurostat - Regional economic Accounts for Agriculture & Farm Structure Survey 2007 <u>By sector:</u> DG AGRI - Farm Accountancy Data Network (FADN)

Baseline indicator objective related	7 - Gross fixed capital formation in agriculture
Measurement of the indicator	Gross fixed capital formation in agriculture
Definition of the indicator	Gross fixed capital formation in agriculture: the investments in assets which are used repeatedly or continuously over a number of years to produce goods in agriculture. It is measured in absolute terms. Agriculture is taken as defined for the Economic Accounts for Agriculture (for differences with division 01 of NACE rev 1.1, see indicator fiche n°6.)
Unit of measurement	Mio. Euro
Source	<u>At national level:</u> Eurostat - Economic Accounts for Agriculture <u>At regional level:</u> Eurostat - Regional economic Accounts for Agriculture

Baseline indicator objective related	8 - Employment development of primary sector
Measurement of the indicator	Employment in primary sector
Definition of the indicator	In Economic Accounts, total employment (ESA 1995, 11.11) covers all persons – both employees and the self-employed - in a specific region. In the European Union Labour Force Survey, employment covers all persons aged 15 year and over, having worked for pay or profit regardless the number of hours per week Primary sector corresponds to division 01 and 02 or branch A of NACE rev. 1.1 (Agriculture, hunting and forestry). When data are provided at NUTS-3 level, or when the source is Labour Force Survey – regardless the NUTS level - Primary sector also covers division 05 or branch B of NACE rev. 1.1 (fishing).
Unit of measurement	Thousands of people employed
Source	Eurostat – National Accounts / Labour Force Survey

Baseline indicator objective related	9 - Economic development in primary sector
Measurement of the indicator	Gross Value Added in primary sector
Definition of the indicator	This indicator measures the gross value added (GVA) in the primary sector in a region. GVA is defined as the value of output less the value of intermediate consumption.

indicator	<p>Output is valued at basic prices, GVA is valued at basic prices and intermediate consumption is valued at purchasers' prices. GVA is measured in absolute terms.</p> <p>Primary sector corresponds to division 01 and 02 or branch A of NACE rev. 1.1 (Agriculture, hunting and forestry). When data are provided at NUTS-3 level, Primary sector also covers division 05 or branch B of NACE rev. 1.1 (fishing).</p>
Unit of measurement	Mio euro
Source	<p><u>At national level:</u> Eurostat - National Accounts</p> <p><u>At regional level:</u> Eurostat – Economic Accounts (ESA95)</p>

Baseline indicator objective related	10 - Labour productivity in food industry
Measurement of the indicator	Gross Value Added per people employed in food industry
Definition of the indicator	<p>Labour productivity is measured through the Gross Value Added (GVA) in food industry per person employed in that branch.</p> <p>GVA is defined as the value of output less the value of intermediate consumption.</p> <p>Output is valued at basic prices, GVA is valued at basic prices and intermediate consumption is valued at purchasers' prices.</p> <p>GVA is measured in absolute terms.</p> <p>Employment covers all persons – both employees and self-employed – engaged in some productive activity that falls within the production boundary of the system.</p> <p>Food industry corresponds to division 15 and 16 or branch DA of NACE rev. 1.1 (manufacture of food products; beverages and tobacco products).</p>
Unit of measurement	Thousands Euro/employee
Source	Eurostat - National Accounts

Baseline indicator objective related	11 - Gross fixed capital formation in food industry
Measurement of the indicator	Gross fixed capital formation in food industry
Definition of the indicator	<p>Gross fixed capital formation in food industry: investments in assets which are used repeatedly or continuously over a number of years to produce goods in food industry. It is measured in absolute terms.</p> <p>Food industry corresponds to division 15 and 16 or branch DA of NACE rev. 1.1 (manufacture of food products; beverages and tobacco products).</p>
Unit of measurement	Mio Euro
Source	Eurostat - National Accounts

Baseline indicator objective related	12 - Employment development in food industry
Measurement of the indicator	Employment in food industry
Definition of the indicator	<p>The absolute employment provides an indication of the importance of the sector in providing jobs in a region.</p> <p>In Economic Accounts, total employment (ESA 1995, 11.11) covers all persons – both employees and the self-employed - in a specific region.</p> <p>Food industry corresponds to division 15 and 16 or branch DA of NACE rev. 1.1 (manufacture of food products; beverages and tobacco products).</p>
Unit of measurement	Thousands of people employed
Source	Eurostat – National Accounts / Labour Force Survey

Baseline indicator objective related	13 - Economic development of food industry
Measurement of the indicator	Gross value added in the food industry
Definition of the indicator	<p>This indicator measures the gross value added (GVA) in the food industry sector in a region.</p> <p>GVA is defined as the value of output less the value of intermediate consumption.</p> <p>Output is valued at basic prices, GVA is valued at basic prices and intermediate consumption is valued at purchasers' prices.</p> <p>GVA is measured in absolute terms.</p> <p>Food industry corresponds to division 15 and 16 or branch DA of NACE rev. 1.1 (manufacture of food products; beverages and tobacco products).</p>
Unit of measurement	Mio Euro
Source	Eurostat - National Accounts

Baseline indicator objective related	14 - Labour productivity in forestry
Measurement of the indicator	Gross Value Added per people employed in forestry
Definition of the indicator	<p>Labour productivity is measured through the Gross Value Added in forestry per employee.</p> <p>GVA is defined as the value of output less the value of intermediate consumption.</p> <p>Output is valued at basic prices, GVA is valued at basic prices and intermediate consumption is valued at purchasers' prices.</p> <p>GVA is measured in absolute terms.</p> <p>Employment covers all persons – both employees and self-employed – engaged in some productive activity that falls within the production boundary of the system.</p>

	<p>Forestry sector corresponds to division 02 in NACE rev. 1.1 (Forestry, logging and related activities).</p> <p>In Economic Accounts for Forestry, production activities relating to vegetable materials used for plaiting, Christmas trees, fruit trees, vines and ornamental nursery trees <u>are excluded</u>, whereas they are covered in the Labour Force Survey.</p> <p>In some cases, the productivity could therefore be underestimated.</p>
Unit of measurement	Thousands Euro/Employee
Source	Eurostat - Economic Accounts for Forestry & Labour force Survey

Baseline indicator objective related	15 - Gross fixed capital formation in forestry
Measurement of the indicator	Gross fixed capital formation in forestry
Definition of the indicator	<p>Gross fixed capital formation in forestry: the investments in assets which are used repeatedly or continuously over a number of years to produce goods in forestry.</p> <p>It is measured in absolute terms.</p> <p>Forestry sector corresponds to division 02 in NACE rev. 1(Forestry, logging and related activities).</p> <p>In Economic Accounts for Forestry, production activities relating to vegetable materials used for plaiting, Christmas trees, fruit trees, vines and ornamental nursery trees <u>are excluded</u>.</p>
Unit of measurement	Mio Euro
Source	Eurostat - Economic Accounts for Forestry

Baseline indicator objective related	16 - Number of semi-subsistence farms in New Member States
Measurement of the indicator	Number of farms smaller than 1 Economic Size Unit in New Member States
Definition of the indicator	<p>Semi-subsistence farms are farms that do not sell (parts of their) product on the market. In general, these will be the farms that are smaller than 1 Economic Size Unit (ESU). In order to get a view on the size and importance of these farms, the absolute number and the share of semi-subsistence farms need to be collected (number of semi-subsistence farms in NMS (< 1 ESU) and Number of semi-subsistence farms in NMS (< 1 ESU) / total number of farms).</p>
Unit of measurement	<p>Number</p> <p>%</p>
Source	Eurostat – Farm Structure Survey 2007

AXIS 2	IMPROVING THE ENVIRONMENT AND THE COUNTRYSIDE THROUGH LAND MANAGEMENT
---------------	--

Baseline indicator objective related	17 – Biodiversity: Population of farmland birds
Measurement of the indicator	Trends of index of population of farmland birds
Definition of the indicator	<p>The farmland bird indicator consists in an aggregated index of population trend estimates of a selected group of 36 breeding bird species dependent on agricultural land for nesting or feeding. Assuming a close link between the selected bird species and the farmland habitat, a negative trend signals that the farm environment is becoming less favourable to birds.</p> <p>The following farmland bird species are included: <i>Alauda arvensis</i>, <i>Anthus campestris</i>, <i>Anthus pratensis</i>, <i>Burhinus oedicnemus</i>, <i>Calendrella brachydactyla</i>, <i>Carduelis cannabina</i>, <i>Ciconia ciconia</i>, <i>Corvus frugilegus</i>, <i>Emberiza cirrus</i>, <i>Emberiza citrinella</i>, <i>Emberiza hortulana</i>, <i>Emberiza melanocephala</i>, <i>Falco tinnunculus</i>, <i>Galerida cristata</i>, <i>Galerida theklae</i>, <i>Hirundo rustica</i>, <i>Lanius collurio</i>, <i>Lanius minor</i>, <i>Lanius senator</i>, <i>Limosa limosa</i>, <i>Melanocorypha calandra</i>, <i>Miliaria calandra</i>, <i>Motacilla flava</i>, <i>Oenanthe hispanica</i>, <i>Passer montanus</i>, <i>Perdix perdix</i>, <i>Petronia petronia</i>, <i>Saxicola rubetra</i>, <i>Saxicola torquata</i>, <i>Serinus serinus</i>, <i>Streptopelia tortur</i>, <i>Sturnus unicolor</i>, <i>Sturnus vulgaris</i>, <i>Sylvia communis</i>, <i>Upupa epops</i>, <i>Vanellus vanellus</i>. In 2007 the list of species covered was modified to be more specific to farmland in the different European biogeographic regions.</p> <p>Indices are calculated for each species independently and are weighted equally when combined in the aggregate index using a geometric mean. Aggregated EU indices are calculated using population-dependent weighting factors for each country and species</p> <p>The indices are compiled by Statistics Netherlands in conjunction with the Pan-European Common Bird Monitoring scheme (PECBM: a joint project of the European Bird Census Council, the Royal Society for the Protection of Birds, BirdLife International, and Statistics Netherlands). The population counts are carried out by a network of volunteer ornithologists coordinated within national schemes.</p> <p>It is indexed on the year 2000, this base year having been selected so as to provide the maximum geographic coverage.</p>
Unit of measurement	Index (2000 = 100)
Source	Statistics Netherlands in conjunction with the Pan-European Common Bird Monitoring scheme (available on Eurostat Website)

Baseline indicator objective related	18 – Biodiversity: High Nature Value farmland and forestry
Measurement of the indicator	Area of High Nature Value farmland (in ha)
Definition of the indicator	High Nature Value farmland and forestry is associated with high biodiversity. The concept of high nature value covers defined areas but also high nature value features (e.g. ponds, hedgerows, buffer strips etc.) which are part of areas that as such would not fall under the

	<p>definition of high nature value. In addition it refers to agricultural and forestry management systems as a driver for creating or maintaining high nature value.</p> <p>It should be noted that the high nature value indicator developed at European level so far focuses on overall distribution and share in agricultural area. Small scale features are only partly covered whereas forestry is not included.</p> <p>The current HNV farmland indicator (cf. Andersen <i>et al.</i>, 2003) distinguishes the following types of high nature value farmland:</p> <ul style="list-style-type: none"> • Type 1: Farmland with a high proportion of semi-natural vegetation. • Type 2: Farmland with a mosaic of low intensity agriculture and natural and structural elements, such as field margins, hedgerows, stone walls, patches of woodland or scrub, small rivers etc. (modified JRC/EEA, 2007) • Type 3: Farmland supporting rare species or a high proportion of European or World populations. <p>The methodology developed for the IRENA indicator, based on land cover data (CORINE database) and agro-economic data (FADN), gives an indication for type 1 and 2 high nature value farmland but not necessarily for type 3.</p> <p>JRC and EEA have improved the land cover approach, including biodiversity data, and this data set is now available for EU27 Member States (excluding Malta). At this stage, estimates are provided on the basis of land cover and biodiversity data only. FADN data will be added in future updates of the IRENA indicator data sets.</p> <p>The data on HNV farmland presented here aim at showing the distribution of HNV farmland areas (state) in Europe based on a consistent methodology for all countries. To compare data holding the same characteristics the estimated share of HNV farmland is calculated on the basis of total farmland as derived from CLC 2000. However, the use of CLC 2000 data leads to certain data artefacts in some countries or regions, in spite of refined selection criteria and the inclusion of additional biodiversity data sets. Further refinements on the basis of national datasets would be advantageous in several regions, e.g. Southern Finland or Slovakia. Malta was not mapped because of lack of data holding the necessary detail.</p> <p>Please note that DG AGRI has issued guidelines for reporting on high nature value farmland and forestry indicators, to support Member States wishing to make use of a national definition for this indicator, and to develop the indicator further to include aspects of the high nature value concept not covered so far.</p>
Unit of measurement	% share of HNV farmland
Source	European Environment Agency (IRENA 23); JRC/EEA HNV farmland EU-27 map http://agrienv.jrc.it/publications/pdfs/HNV_Final_Report.pdf

Baseline indicator objective related	19 – Biodiversity: tree species composition
Measurement of the indicator	Area of forest and other wooded land classified by number of tree species occurring and by forest type.
Definition of the indicator	<p>Multi-species forest and other wooded land (FOWL) are usually richer in biodiversity than mono-species forest and other wooded land.</p> <p>However, it has to be considered that some natural forest ecosystems have only one or two tree species, e.g. natural sub-alpine spruce stands.</p> <p>This indicator corresponds to the MCPFE (Ministerial Conference on the Protection of Forests in Europe) indicator 4.1.</p>
Subdivision	<p>The categories of species groups considered are:</p> <ul style="list-style-type: none"> • Coniferous: predominantly coniferous FOWL as percentage of total FOWL • Broadleaved: predominantly broadleaved FOWL as percentage of total FOWL • Mixed: mixed FOWL as percentage of total FOWL

Unit of measurement	% FOWL
Source	MPCFE/UNECE/FAO MPCFE 2007 - <u>"State of Europe's Forests 2007 – The MCPFE report on sustainable Forest management in Europe"</u>

Baseline indicator objective related	20 - Water quality: Gross Nutrient Balances
Measurement of the indicator	Surplus of nutrient in kg/ha.
Definition of the indicator	<p>Nutrient or mineral balances establish links between agricultural nutrient use, changes in environmental quality, and the sustainable use of soil nutrients. The gross nutrient balances provide an indication of potential water pollution and identifies those agricultural areas and systems with very high nitrogen or phosphorus loadings. As the indicator integrates the most important agricultural parameters with regard to potential nitrogen or phosphorus surplus, it is currently the best available approximation of agricultural pressures on water quality</p> <p>The gross nitrogen balance provides an estimate of the potential surplus of nitrogen on agricultural land (kg/ha), based on statistical information on the amounts of mineral fertiliser applied, organic fertiliser production, nitrogen fixed in the soil, atmospheric deposition of nitrogen compounds, seeds and planting material, and amounts of harvested crops and forage.</p> <p>The data is collected in accordance with the OECD/Eurostat national nitrogen balance handbook.</p> <p>For the gross phosphorus balance a comparable methodology applies.</p>
Sub-indicators	<p>This indicator is broken down according to the nutrient:</p> <ul style="list-style-type: none"> • Gross nitrogen balance • Gross phosphorus balance
Unit of measurement	kg/ha
Source	Environmental performance of Agriculture in OECD countries since 1990, Paris, France, 2008, volume 4, OECD, 2008

Baseline indicator objective related	21 – Water quality: Pollution by nitrates and pesticides
Measurement of the indicator	Annual trends in the concentrations
Definition of the indicator	<p>The trend in concentration of nitrate and pesticides loads in ground and surface waters is an indicator of the impact of agricultural activities on water quality.</p> <p>The trend is taken instead of concentration in year n, in order to overcome the possible differences of measurement that would not allow comparing easily the different measures.</p> <p>It is calculated over a period of ten years.</p> <p>The trend is evaluated using a 3 years rolling average with an index (1992-1994 = 100).</p>
Sub-indicators	<p>This indicator of pollution is broken down according to the type of pollutant, and type of water body, which leads to the following sub-indicators:</p> <ul style="list-style-type: none"> • annual trends in the concentration of nitrates in surface water

	<ul style="list-style-type: none"> • annual trends in the concentration of nitrates in ground water • annual trends in the concentration of pesticides in surface water • annual trends in the concentration of pesticides in ground water
Unit of measurement	<p>Index (1992-1994 = 100)</p> <p>Trends in concentration of total oxidised nitrogen (converted in NO₃ mg/L)</p> <p>Trends in concentration of pesticides (µg/L)</p>
Source	European Environment Agency (EUROWATERNET)

Baseline indicator objective related	22 - Soil: Areas at risk of soil erosion
Measurement of the indicator	Areas at risk of soil erosion
Definition of the indicator	<p>Sustainable management contributes to less soil erosion. This effect will be measured through estimates of soil loss in Tons / ha / year.</p> <p>The models used: Pan-European Soil Erosion Risk Assessment model – Pesera project (JRC-Ispira) provides results for water erosion only, RUSLE model for Finland and Sweden.</p>
Unit of measurement	Tons/ha/year, estimate
Source	JRC Ispira – Pesera project

Baseline indicator objective related	23 - Soil: Organic farming
Measurement of the indicator	Utilised Agricultural Area under organic farming
Definition of the indicator	<p>Areas under organic farming are an important indicator for the extent to which agricultural land is sustainably managed. Organic farming is defined as: farming not using fertilizers of synthetic pesticides.</p> <p>For the purpose of sustainable management of agricultural land, organic farming is not restricted to the area under Regulation (EEC) No 2092/91 (certified organic and in-conversion) but also covers equivalent national rules for organic production (e.g. Farm Structure Survey - Commission Decision 2000/115/EC).</p>
Unit of measurement	Ha of UAA

Organic Centre Wales - Institute of Rural Studies, University of Wales, Aberystwyth 3. Eurostat – Farm Structure Survey 2007

Baseline indicator objective related	24 - Climate change: Production of renewable energy from agriculture and forestry
Measurement of the indicator	Production of renewable energy from agriculture and forestry
Definition of the indicator	<p>For this indicator, due to data availability, production of renewable energy from agriculture covers:</p> <ul style="list-style-type: none"> • Biodiesel from oilseeds crops • Ethanol from starch/sugar crops • Energy from agricultural biogas (livestock manure and energy crops, waste and residues) <p>It does not cover:</p> <ul style="list-style-type: none"> • Other energy like heat from cereal straw etc <p>Part of the EU biodiesel production is based on non-domestic sources (imported vegetable oils, oilseeds), therefore an ad-hoc quantification of domestic production is not possible. In addition the category "energy from agricultural biogas", even though predominantly cover agricultural biogas, also contains some biogas from municipal solid waste etc.</p> <p>Production of renewable energy from forestry covers:</p> <ul style="list-style-type: none"> • Purpose-grown energy crops (poplar, willow, etc.) • Woody material generated by an industrial process (wood/paper industry in particular) or provided directly by forestry and agriculture (firewood, wood chips, bark, sawdust, shavings, chips, black liquor etc.) • Wastes such as straw, rice husks, nut shells, poultry litter, crushed grape dregs etc.
Sub-indicators	<p>This indicator is broken down according to the sector:</p> <ul style="list-style-type: none"> • Production of renewable energy from Agriculture • Production of renewable energy from Forestry
Unit of measurement	<p>Renewable energy from agriculture: KToe (1000 tons of oil equivalent)</p> <p>Renewable energy from forestry: KToe (1000 tons of oil equivalent)</p>
Source	<p><u>Renewable energy from agriculture:</u></p> <p>DG AGRI based on:</p> <ul style="list-style-type: none"> • EurObservER 2008 and 2009: Production of biodiesel (EBB) in kt, production of fuel bioethanol (eBIO) in mln litres, production of "other biogas" in ktoe <ul style="list-style-type: none"> • Conversion: 1 tonne biodiesel = 0.86 toe, 1000 l bioethanol = 0.51 toe <p><u>Renewable energy from forestry:</u></p> <p>Eurostat – Energy Statistics</p>

Baseline indicator objective related	25 - Climate change: UAA devoted to renewable energy
Measurement of the indicator	Utilised Agriculture Area devoted to energy and biomass crops

Definition of the indicator	<p>The agricultural contribution to the mitigation of climate change in terms of surface is appreciated by the UAA devoted to renewable energy.</p> <p>UAA devoted to renewable energy is composed of two elements:</p> <ul style="list-style-type: none"> • Set-aside area with non-food crops (Reg (EC) 1251/1999) • Areas benefiting from the "Energy crop premium" (Reg (EC) 1782/2003) <p>Based on DG AGRI's crop balances an estimate of area for biomass outside these two schemes, i.e. without any specific support, is provided for the EU 27. This estimate has to be considered to be conservative, as other crops for energy (and material use) are only partly being covered (SRC, silage maize for biogas etc) due to lack of data.</p> <p>2007 is the last year where compulsory set-aside was applicable in the EU, New Members States which opted for the Single Area Payment Scheme (all except MT & SI) did never apply compulsory set-aside. 2007 was the first year in which the Energy Crop Premium was available in the new Member States.</p>
Unit of measurement	Ha of UAA
Source	DG AGRI

Baseline indicator objective related	26 - Climate change: GHG emissions from agriculture
Measurement of the indicator	Agricultural emissions of greenhouse gases
Definition of the indicator	<p>Greenhouse gases as a whole include CO₂, CH₄, N₂O and fluorinated gases (HFCs, PFCs and SF₆).</p> <p>According to the United Nations Framework Convention on Climate Change (UNFCCC) the following are sources of greenhouse gases from agriculture:</p> <ol style="list-style-type: none"> enteric fermentation (CH₄); manure management (CH₄, N₂O); rice cultivation (CH₄); agricultural soil management (CO₂, CH₄, N₂O); prescribed burning of savannahs (CH₄, N₂O); and field burning of agricultural residues (CH₄, N₂O). <p>Emissions from land use change and forestry are excluded.</p> <p>Carbon dioxide emissions do not include emissions from fossil fuel combustion sources that arise from agricultural-related processes such as transport, greenhouse heating and grain drying. Such sources are inventoried in IPCC under the Energy section, but the individual contribution of agriculture is not inventoried.</p> <p>The primary source of data is the European Environment Agency. It compiles data received from the 25 Member States annual submission of data to the Secretariat of the United Nations Framework Convention on Climate Change (UNFCCC). Member States apply the 1996 IPCC guidelines to estimate the emissions and, they use the common reporting format (CRF) for submission of their inventories. Data collection via the EIONET (European Information and Observation Network) is being extended to include Candidate Countries which are becoming members of the European Environment Agency network.</p>

AXIS 3	IMPROVING THE QUALITY OF LIFE IN RURAL AREAS AND ENCOURAGING DIVERSIFICATION OF ECONOMIC ACTIVITY
---------------	--

Baseline indicator objective related	27 – Farmers with other gainful activity
Measurement of the indicator	Sole holders-managers with other gainful activity as percentage of total number of farm holders (sole holders-managers)
Definition of the indicator	<p>Besides their work on the farm, the holders may carry out other gainful activities. This indicator measures the extent to which farmers have complemented their income by gainful activities other than farming. This is every activity other than activity relating to farm work, carried out for remuneration (salary, wages, profits or other payment, including payment in kind, according to the service rendered). This includes non-agricultural activities carried out on the holding itself (camping sites, accommodation for tourists, etc.) or on another agricultural holding as well as activity in a non-agricultural enterprise.</p> <p>The numerator includes all sole-holder managers with other - either subsidiary or major - gainful activities.</p> <p>The denominator consists in the sum of sole-holders-managers having answered to that question (i.e. Farmers with other (subsidiary + major) gainful activities + farmers with no other gainful activity)</p>
Unit of measurement	%
Source	Eurostat – Farm Structure Survey 2007

Baseline indicator objective related	28 – Employment development of non-agricultural sector
Measurement of the indicator	Employment in secondary and tertiary sectors
Definition of the indicator	<p>Diversification of the economy is expressed in the number of people employed outside the agricultural sector.</p> <p>In Economic Accounts, total employment (ESA 1995, 11.11) covers all persons – both employees and the self-employed - in a specific region.</p> <p>In the European Union Labour Force Survey, employment covers all persons aged 15 year and over, having work for pay or profit regardless the number of hours per week</p> <p>Due to data availability, non-agricultural sector is defined as the sum of secondary and tertiary sectors.</p> <p>Agricultural sector is therefore implicitly defined as the primary sector (agriculture, hunting, forestry and fisheries).</p> <p>It should be noticed that:</p> <ul style="list-style-type: none"> • in the Economic Accounts: <ul style="list-style-type: none"> ◦ at NUTS 2 and NUTS 3 level data cover the divisions 01, 02 & 05 or branch A_B of NACE rev. 1.1 • in Labour Force Survey, primary sector corresponds to divisions 01, 02 & 05 or branch A_B of NACE rev. 1.1, and therefore always include fisheries. <p>Secondary sector covers divisions 10 to 45 or branches C to F of NACE rev. 1.1. Tertiary sector covers divisions 50 to 95 or branches G to P of NACE rev.1.1.</p>
Unit of measurement	Thousands of employed people
Source	Eurostat – Economic Accounts(ESA95) / Labour Force Survey

Baseline indicator objective related	29 – Economic development of non-agricultural sector
Measurement of the indicator	GVA in secondary and tertiary sectors
Definition of the indicator	<p>This indicator measures the gross value added (GVA) outside the agricultural sector in a region.</p> <p>GVA is defined as the value of output less the value of intermediate consumption. Output is valued at basic prices, GVA is valued at basic prices and intermediate consumption is valued at purchasers' prices.</p> <p>Due to data availability, non-agricultural sector is defined as the sum of secondary and tertiary sectors.</p> <p>Agricultural sector is therefore implicitly defined as the primary sector (agriculture, hunting, forestry and fisheries).</p> <p>It should be noticed that:</p> <ul style="list-style-type: none"> • in the Economic Accounts: <ul style="list-style-type: none"> ◦ at NUTS 2 and NUTS 3 level data cover the divisions 01, 02 & 05 or branch A_B of NACE rev. 1.1 • in Labour Force Survey, primary sector corresponds to divisions 01, 02 & 05 or branch A_B of NACE rev. 1.1, and therefore always include fisheries. <p>Secondary sector covers divisions 10 to 45 or branches C to F of NACE rev. 1.1. Tertiary sector covers divisions 50 to 95 or branches G to P of NACE rev.1.1.</p>
Unit of measurement	Mio euro
Source	Eurostat – Economic Accounts(ESA95)

Baseline indicator objective related	30 – Self-employment development
Measurement of the indicator	Self-employed persons
Definition of the indicator	<p>Self-employed persons are persons who work in their own business, farm or professional practice for the purpose of earning a profit.</p> <p>This indicator is used as a proxy to measure entrepreneurship.</p>
Unit of measurement	Thousands of self-employed people
Source	Eurostat – Labour Force Survey

Baseline indicator objective related	31 - Tourism infrastructure in rural areas
Measurement of the indicator	Total number of bed places in all forms of tourist accommodation
Definition of the indicator	<p>The tourism infrastructure in rural areas consists in several elements.</p> <p>For this indicator the number of bed places is taken as an indication for the tourism infrastructure (capacity).</p> <p>The number of bed places is calculated over hotels and similar establishments, tourist campsites, holiday dwellings and other collective accommodations.</p> <p>When the number of bed places in one category of establishment was missing, the sum of available data is provided.</p> <p>The number of bed places in an establishment or dwelling is determined by the number of persons who can stay overnight in the beds set up in the establishment (dwelling), ignoring any extra beds that may be set up by customer request. The term bed place applies to a single bed, double bed being counted as two bed places. The unit serves</p>

	<p>to measure the capacity of any type of accommodation. A bed place is also a place on a pitch or in a boat on a mooring to accommodate one person. One camping pitch should equal four bed places if the actual number of bed places is not known.</p> <p>Definitions, size thresholds, etc. can be found in Council Directive on Tourism statistics 95/97/EC</p>
Unit of measurement	Number of bed places
Source	Eurostat

Baseline indicator objective related	32 - Internet take-up in rural areas
Measurement of the indicator	Persons having subscribed to DSL internet as a percentage of total population
Definition of the indicator	<p>DSL: Digital Subscriber Line</p> <p>A 2004 Commission Communication {COM(2004) 369: "Connecting Europe at High Speed : National Broadband Strategies"} referred to broadband as "a wide range of technologies that have been developed to support the delivery of innovative interactive services, equipped with always-on functionality, providing broad bandwidth capacity that evolves over time, and allowing the simultaneous use of both voice and data services."</p> <p>Those data are collected through a survey of telecom operators. As telecom operators are not able to make the difference between residential and business use, broadband data are typically presented in terms of population. The same methodology is used by the Communication Committee (which is made of national regulatory authorities and provides the official data on broadband penetration also for the structural indicators) and by for example the OECD - all broadband penetration rates are expressed in terms of population.</p>
Unit of measurement	%
Source	<p>DG INFSO</p> <p>The file is from Idate, a consultant that made a study for DG INFSO on development of broadband access and providing the breakdown rural/suburban/urban areas. A presentation of results will shortly be available in the Benchmarking section of Europa i2010 website.</p> <p>http://ec.europa.eu/information_society/eeurope/i2010/benchmarking/index_en.htm</p>
Notes	<p>Caution: this breakdown rural / suburban / urban areas differs from the OECD definition:</p> <ul style="list-style-type: none"> • Urban areas: areas with population density > 500 inhabitants /km² • Suburban areas: areas with population density > 100 and < 500 inhabitants /km² • Rural areas: areas with population density < 100 inhabitants /km²

Baseline indicator objective related	33 – Development of services sector
Measurement of the indicator	GVA in services as percentage of total GVA
Definition of the indicator	This indicator measures the share of gross value added (GVA) in the services sector in a region.

	<p>GVA is defined as the value of output less the value of intermediate consumption.</p> <p>Output is valued at basic prices, GVA is valued at basic prices and intermediate consumption is valued at purchasers' prices.</p> <p>Services are divisions 50 to 95 or branches G to P of NACE rev.1.1.</p> <p>The total corresponds to the sum of divisions 01 to 95 or branches from A to P of NACE rev.1.1.</p>
Unit of measurement	%
Source	Eurostat – Economic Accounts(ESA95)

Baseline indicator objective related	34 - Net migration
Measurement of the indicator	Annual crude rate of net migration
Definition of the indicator	<p>The crude rate of net migration is the ratio of the net migration during the year to the average population in that year.</p> <p>Immigration or emigration flows being either unknown or not sufficiently precise, <u>the crude rate of net migration is calculated as equal to the difference between the crude rate of population increase and the crude rate of natural increase</u> (that is, net migration is considered as the part of population change not attributable to births and deaths).</p> <p>The value is expressed per 1000 inhabitants.</p> <ul style="list-style-type: none"> • The crude rate of population increase is the ratio of the total population change during the year to the average population of the area in question in that year. The value is expressed per 1000 inhabitants. • The crude rate of natural increase is the ratio of natural population increase (births – deaths) over a period to the average population of the area in question during that period. The value is expressed per 1000 inhabitants. <p>Crude rate of net migration_(y) = [(population_(1/01/y+1) – population_(1/01/y)) – (births_(y) - deaths_{(y)))] / average population_(y)}</p>
Unit of measurement	Rate per 1000 inhabitants
Source	<p><u>At national level:</u></p> <p>Eurostat: Crude rate of net migration including corrections</p> <p><u>At regional level</u></p> <p>calculations based on Eurostat Demographic Statistics</p>

Baseline indicator objective related	35 – Life-long learning in rural areas
Measurement of the indicator	% of adults (25-64 y. o.) participating in education and training
Definition of the indicator	Life-long learning indicator refers to persons aged 25 to 64 who answered they received education or training in the four weeks preceding the survey (numerator).

	<p>The denominator consists of the total population of the same age group, excluding “no answers” to the question ‘participation to education and training’ (i.e. sum of ‘Adults participating’ and ‘Adults non participating’ in life-long learning). Both the numerator and the denominator come from the European Union Labour Force Survey.</p> <p>Life long training refers to all education or vocational training whether or not relevant to the respondent’s current or future employment. Data include initial education, additional education, continuing or additional training, training in enterprises, apprenticeships, on-the-job training, seminars and workshops, distance education, evening classes, self-learning, etc. They also include courses followed out of personal interest only and may cover all forms of learning, and training in subjects such as languages, computer studies, business studies, art and culture, health and medicine.</p> <p>From 2004, this variable is derived from two variables ‘participation in regular education’ and ‘participation in other taught activities’. Self learning activities are no longer covered.</p> <p>A reference period of last four weeks preceding the survey has been chosen for the questions on participation to the education in order to avoid distortion of information due to recall problems.</p>
Unit of measurement	%

AXIS 4	LEADER
---------------	---------------

Baseline indicator objective related	36 – Development of Local Action Groups
Measurement of the indicator	Share of population covered by Local Action Groups in the framework of the Leader program
Definition of the indicator	Local Action Groups are an important factor for initiating rural development. This indicator provides an idea of the number of people in rural areas that live in an area where a Local Action Group is active.
Unit of measurement	%
Source	DG AGRI

Context related Baseline Indicators

HORIZONTAL

Baseline indicator for context	1 - Designation of rural areas
Measurement of the indicator	Designation of rural areas according to the OECD methodology.
Definition of the indicator	<p>The OECD methodology is based on population density (OECD, Creating rural indicators for shaping territorial policy, Paris, 1994).</p> <p>It is based on a two-step approach :</p> <p>First, the OECD identifies local areas (municipalities) as rural if the population density is below 150 inhabitants per square kilometre.</p> <p>Then, at regional level (NUTS 3 or NUTS 2), the OECD distinguishes:</p> <ul style="list-style-type: none"> • <u>Predominantly Rural regions (PR)</u>: more than 50% of the population is living in rural communes (with less than 150 inhabitants / km²) • <u>Intermediate Regions (IR)</u>: 15% to 50% of the population of the region is living in rural local units • <u>Predominantly Urban regions (PU)</u>: less than 15% of the population of the region is living in rural local units. <p>At the end of 2005, a new step has been added in the approach (OECD, Regions at a Glance, Paris, 2005,) to better take into consideration the urban centres. An "urban centre" in Europe is defined as a local unit LAU2 (e.g. municipality) with a population density above 150 inhabitants per km² and a total population above 200.000 inhabitants.</p> <ul style="list-style-type: none"> • A region that would be classified as rural on the basis of the general rule is classified as intermediate if it has an urban centre of more than 200.000 inhabitants representing no less than 25% of the regional population • A region that would be classified as intermediate on the basis of the general rule is classified as predominantly urban if it has an urban centre of more than 500 000 inhabitants representing no less than 25% of the regional population. <p>As a result, the regions (NUTS 3 or NUTS 2) can be 'flagged' with their category: Predominantly Rural, Intermediate, Predominantly Urban.</p> <p>Characterisation of the rural character at regional level, where most of the statistics are available, allows drawing easily a picture of the different types of areas at national level.</p> <p>As for the first step, the method requires information on population and areas at local level, the characterisation can only be made with a long periodicity (in general every 10 years when a population census is made).</p> <p>The OECD methodology is the only definition of rural areas internationally recognised. However, the results of this methodology are sometimes considered as imperfectly reflecting the rural character of areas, particularly in densely populated regions. The</p>

	methodology is therefore sometimes adapted or replaced by another approach.

Baseline indicator for context	2 - Importance of rural areas
Measurement of the indicator	This indicator consists in 4 sub-indicators : <ul style="list-style-type: none"> • % territory in rural areas • % population in rural areas • % Gross Value Added in rural areas • % employment in rural areas
Definition of the indicator	This context indicator consists in several sub-indicators giving the relative importance of rural areas. The following aspects are taken into account: <ul style="list-style-type: none"> • Rural area as a percentage of the total area • People living in rural areas as a percentage of the total population • GVA in rural areas as a percentage of the total GVA in a region/country • Employment in rural areas as a percentage of the total employment in a region/country
Sub-indicators	% Territory in rural areas % Population in rural areas % GVA in rural areas % Employment in rural areas
Subdivision	For each sub-indicator the breakdown according to the rural/urban character used for context related baseline indicator n°1 "Designation of rural areas" should be provided. With OECD methodology, the breakdown is : <ul style="list-style-type: none"> • % in the 'predominantly rural' areas • % in the 'intermediate region' areas • % in the 'predominantly urban' areas

AXIS 1	IMPROVING THE COMPETITIVENESS OF THE AGRICULTURAL AND FORESTRY SECTOR
---------------	--

Baseline indicator for context	3 – Agricultural land use
Measurement of the indicator	% Utilised Agricultural Area in arable area / permanent grass / permanent crops
Definition of the indicator	The land use of interest is arable crops, permanent pastures (including meadows) and permanent crops. According to the definition applied in Farm Structure Surveys of Eurostat (Reg. 571/88)

	<p>and Commission Decision 2000/115), the Utilised Agricultural Area (UAA) is composed of :</p> <ul style="list-style-type: none"> • D. Arable crops • E. Kitchen gardens • F. Permanent pastures and meadows • G. Permanent crops <p>When using this source the small part of UAA dedicated to kitchen gardens is not reported; therefore the shares of arable crops, permanent pastures and permanent crops can not sum to 100%.</p>
Subdivision	<p>The categories of land use are :</p> <ul style="list-style-type: none"> • Arable crops • Permanent pastures • Permanent crops
Unit of measurement	% UAA
Source	Eurostat – Farm Structure Survey 2007

Baseline indicator for context	4 - Farm structure																																				
Measurement of the indicator	<p>This indicator consists in 5 sub-indicators :</p> <ul style="list-style-type: none"> • Number of farms • Utilised agricultural area • Average area farm size and distribution • Average economic farm size and distribution • Labour force 																																				
Definition of the indicator	<p>The farm structure provides useful information on the environment in which policy is implemented. Different information can be used to describe the farm structure :</p> <ul style="list-style-type: none"> • The number of farms • The utilised agricultural area • The labour force • The type of production as the value added of the area, and then the economic size, depends on the production <p>The absolute and average values as well as the distribution of the factors between farms are of interest.</p> <p>In Farm Structure Surveys of Eurostat, the Labour Force is measured in Annual Work Units (AWU).</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>An Annual Work Unit (AWU) is equivalent of the full-time employment. 1 AWU corresponds to the work performed by a person undertaking fulltime agricultural work on the holding over a 12 month period. The yearly working time of such worker is 1800 hours (225 working days of 8 hours per day), unless national provisions governing contracts of employment are specified. Countries where the yearly working time corresponding to 1 AWU follows national provisions:</p> <table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th>country</th> <th>DE</th> <th>EL</th> <th>ES</th> <th>FR</th> <th>CY</th> <th>LV</th> <th>LT</th> <th>LU</th> <th>AT</th> <th>PL</th> <th>RO</th> </tr> </thead> <tbody> <tr> <td>hours</td> <td>1760</td> <td>2200</td> <td>1824</td> <td>1824</td> <td>2080</td> <td>1840</td> <td>2032</td> <td>2200</td> <td>2000</td> <td>2120</td> <td>1960</td> </tr> <tr> <td>days</td> <td>220</td> <td>275</td> <td>228</td> <td>228</td> <td>260</td> <td>230</td> <td>254</td> <td>275</td> <td>250</td> <td>265</td> <td>245</td> </tr> </tbody> </table> <p>As the volume of agricultural labour is being calculated on the basis of fulltime equivalent jobs, no one person can therefore represent more than one AWU. This constraint holds even if it is known that someone is working on agricultural activities for more than the number of hours defining full-time in the Member State concerned).</p> </div> <p>In Farm Structure Surveys of Eurostat, the economic size of a farm is measured in European Size Units (ESU), based on the definition of the Community typology for agricultural holdings (Commission decision 85/377/EEC).</p>	country	DE	EL	ES	FR	CY	LV	LT	LU	AT	PL	RO	hours	1760	2200	1824	1824	2080	1840	2032	2200	2000	2120	1960	days	220	275	228	228	260	230	254	275	250	265	245

Source	Eurostat – Farm Structure Survey 2007

Baseline indicator for context	5 - Forestry structure
Measurement of the indicator	<p>This indicator consists in 3 sub-indicators :</p> <ul style="list-style-type: none"> ▪ Area of forest available for wood supply (FAWS) ▪ Ownership (% area of FAWS under "eligible" ownership) ▪ Average size of private holding (FOWL)
Definition of the indicator	<p><u>Forest available for wood supply (FAWS)</u> is defined as "Forest where any legal, economic, or specific environmental restrictions do not have a significant impact on the supply of wood, which includes: areas where, although there are no such restrictions, harvesting is not taking place, for example areas included in long-term utilization plans or intentions."</p> <p><u>Public institutions other than State</u> cover in "Forest/other wooded land belonging to cities, municipalities, villages and communes. It includes any publicly owned forest and other wooded land not classified as being "in State ownership"; State ownership meaning owned by national, state and regional governments, or by government-owned corporations; Crown forest and other wooded land."</p> <p><u>Private ownership</u> covers "Forest/other wooded land owned by individuals, families, co-operatives and corporations which may be engaged in agriculture or other occupations as well as forestry; private forest enterprises and industries; private corporations and other institutions (religious and educational institutions, pension and investment funds, nature conservation societies, etc)."</p> <p><u>Forest and Other Wooded Land (FOWL)</u> consists of :</p> <p><u>Forest</u> defined as "Land with tree crown cover (or equivalent stocking level) of more than 10 percent and area of more than 0.5 ha. The trees should be able to reach a minimum height of 5 m at maturity in situ. May consist <u>either</u> of closed forest formations where trees of various storeys and undergrowth cover a high proportion of the ground;</p>

	<p><u>or</u> of open forest formations with a continuous vegetation cover in which tree crown cover exceeds 10 percent. Young natural stands and all plantations established for forestry purposes which have yet to reach a crown density of 10 percent or tree height of 5m are included under forest, as are areas normally forming part of the forest area which are temporarily unstocked as a result of human intervention or natural causes but which are expected to revert to forest.”</p> <p><u>Other wooded land</u> defined as “Land either with a tree crown cover (or equivalent stocking level) of 5-10 percent of trees able to reach a height of 5 m at maturity in situ; or a crown cover (or equivalent stocking level) of more than 10 percent of trees not able to reach a height of 5 m at maturity in situ (e.g. dwarf or stunted trees) and shrub or bush cover. It excludes areas having the tree, shrub or bush cover specified above but of less than 0.5 ha and width of 20 m, which are classed under "other land"; land predominantly used for agricultural practices.”</p> <p>(TBFRA 2000 definitions)</p>
Sub-indicators	<ul style="list-style-type: none"> ▪ Area of forest available for wood supply (FAWS) ▪ Ownership <p>This indicator has 2 subdivisions:</p> <ul style="list-style-type: none"> - % FAWS owned by other public institutions (other than State) - % FAWS private - owned <ul style="list-style-type: none"> ▪ Average size of the private holding of Forest and Other Wooded Land
Unit of measurement	<ul style="list-style-type: none"> ▪ Area of FAWS : hectares (ha) ▪ Ownership : % ▪ Average size of the private holding of FOWL : hectares (ha)
Source	MCPFE 2007

Baseline indicator for context	6 – Forest productivity
Measurement of the indicator	Average net annual volume increment (FAWS)
Definition of the indicator	Forest productivity is measured by the <u>average net annual increment</u> , i.e. “the average annual volume over the given reference period of gross increment less that of natural losses on all trees to a minimum diameter of 0 cm.” <u>Forest available for wood supply (FAWS)</u> is defined as “Forest where any legal, economic, or specific environmental restrictions do not have a significant impact on the supply of wood, which includes: areas where, although there are no such restrictions, harvesting is not taking place, for example areas included in long-term utilization plans or intentions”.
Unit of measurement	m3 overbark / year / ha of FAWS
Source	Temperate and Boreal Forest Resources Assessment 2000 (TBFRA 2000) – UNECE/FAO

AXIS 2	IMPROVING THE ENVIRONMENT AND THE COUNTRYSIDE THROUGH LAND MANAGEMENT
---------------	--

Baseline indicator for context	7 - Land cover																																						
Measurement of the indicator	% area in agricultural / forest / natural / artificial classes																																						
Definition of the indicator	<p>Land cover is the actual distribution of forests, water, desert, grassland and other physical features of the land, including those created by human activities. Land use, on the other hand, characterises the human use of a land cover type.</p> <p>The data source used is CORINE Land Cover. CORINE Land Cover databases are obtained through computer assisted interpretation of satellite images acquired in 1990 and 2000, offering the possibility to describe the geographic distribution of specific land cover changes in a geo-referenced approach.</p> <p>CORINE land cover (CLC) describes land cover (and partly land use) with a three-level nomenclature of 44 classes. For the purpose of this indicator, they have been grouped so as to get the four pre-listed classes. CLC was elaborated based on the visual interpretation of satellite images (Spot, Landsat TM and MSS). Ancillary data (aerial photographs, topographic or vegetation maps, statistics, local knowledge) is used to refine interpretation and assign classes. The CLC database is based on a standard production methodology characterised by the following elements: Mapping scale is 1:100 000. Mapping accuracy is 100 m. The minimum mapping unit for the inventory is 25 ha for areas, and 100 m for linear elements.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: left;">LEVEL 1</th> <th style="text-align: left;">LEVEL 2</th> <th style="text-align: left;">Reclassification</th> </tr> </thead> <tbody> <tr> <td rowspan="4">1. Baseline indicator for context	9 - Areas of extensive agriculture
Measurement of the indicator	<p>This indicator consists in 2 sub-indicators :</p> <ul style="list-style-type: none"> • % Utilised Agricultural Area for extensive arable crops • % Utilised Agricultural Area for extensive grazing
Definition of the indicator	<p>This indicator reflects more the natural conditions than the actual current intensity of production.</p> <p>Extensive agriculture is defined as :</p> <ul style="list-style-type: none"> • For area under arable crops production (except forage crops), when the regional yield for cereals (excluding rice) is less than 60% of the EU-27 average, • For grazing livestock production (cattle, sheep & goats), when the stocking density does not exceed 1 Livestock Unit per hectare of forage area (forage crops, permanent pastures and meadows). <p>Permanent crops (olive trees, vineyards, fruit trees, nuts, etc) are not covered as it was, at this time, not possible to find a satisfactory measurement of extensive production for these enterprises.</p> <p>Cereal yield is a 3 years average.</p> <p>The conversion of animals in livestock unit is made using the coefficients of Art. 131 of Council regulation (EC) 1782/2003 for support for extensive grazing production (i.e. not the coefficients used by Eurostat). The number of cattle less than 6 months is estimated by taken into account only 50% of animals less than 1 year.</p> <p>When possible forage area should also cover common land, a part of the Utilised Agricultural Area of holdings not recorded in Farm Structure Surveys. It could be made using the information on "grass" from land use statistics.</p> <p>The forage crops are defined as characteristic D18 (forage plants) of Farm Structure Surveys (fodder roots and brassicas (D/12) could be added). The forage area does not cover coarse grains (except fodder maize).</p> <p>The evaluation of the extensive character of agriculture should be made at the most detailed geographical level possible.</p> <p>The evaluation of the extensive character of agriculture at Member State level is made by aggregating the geographical units.</p>
Sub-indicators	<p>% UAA for extensive arable crops</p> <p>% UAA for extensive grazing</p>
Unit of measurement	% UAA

Baseline indicator for context	10 – Natura 2000 area
Measurement of the indicator	<p>This indicator consists in 3 sub-indicators :</p> <ul style="list-style-type: none"> ▪ % of territory under Natura 2000 ▪ % UAA under Natura 2000 ▪ % forest area under Natura 2000
Definition of the indicator	<p>This indicator provides information on the preservation of the natural environment and landscape and the protection and improvement of natural resources. Under Natura 2000 a network of areas is designated to conserve natural habitats and species of wildlife which are rare, endangered or vulnerable in the European Community.</p> <p>The Natura 2000 network consists of sites :</p> <ul style="list-style-type: none"> • designated by Member States as <u>special protection areas</u> (SPA) under the Birds Directive (Council Directive 79/409/EEC of 2 April 1979), • those proposed by Member States as <u>proposed sites of Community interest</u> (pSCI) and later designated as <u>special areas of conservation</u> (SAC) under the Habitats Directive (Council Directive 92/43/EEC of 21 May 1992). <p>For the Special Protection Areas designated under the Birds Directive, the responsibility for designation lies entirely with the Member States. The Commission (DG ENV) has to be informed when new areas are designated or existing areas are modified. The information received on new or revised areas is passed on to the European Topic Centre on Biodiversity (ETC_BD), who regularly produces consolidated versions of the SPA database for the whole EU.</p> <p>For the now proposed Sites of Community Importance, which are now Sites of Community Importance and will in the future be Special Conservation Areas under the Habitats Directive, there is a three-stage process that starts with the proposal by Member States. The proposals are irregularly transferred to the Commission who evaluates with the ETC_BD and independent experts whether or not the proposed sites ensure sufficient protection and, on the basis of that evaluation, ask the Member States to propose more sites whenever necessary. The ETC_BD regularly (about twice a year) compiles all the information received into a single EU database.</p> <p>The lists of sites foreseen in the Habitats Directive are divided in seven bio-geographic regions (Pannonian, Boreal, Continental, Atlantic, Alpine, Macaronesian and Mediterranean) within the territory of the Union. The first list for the Macaronesian region was agreed in December 2001. The second list was adopted in December 2003 for the Alpine region, followed in 2004 by the lists for the Continental and Atlantic regions. The list for the Boreal region was adopted in 2005, and the list for the Mediterranean region in 2006. The lists are established on the basis of proposals made by the Member States, which are subsequently evaluated with the assistance of the European Environment Agency.</p> <p>The Natura 2000 sites include different types of European ecosystems. Some sites are in coastal areas, or in open marine waters, some contain lakes or are riverline, and many include forest and farmland. For calculating an improved version of this indicator geo-referenced information was required. The data sets used consist of the Natura 2000 Spatial Dataset and the CORINE land cover 2000. Although CLC 2000 categories do not fully correspond to the statistical definitions of agricultural area (UAA) or forests, the overlay of the two data sets allows an accurate geographical estimation of land use data inside Natura 2000 sites.</p>
Sub-indicators	<ul style="list-style-type: none"> ▪ % of territory under Natura 2000 Natura 2000 being SPA & SPI, territory meaning terrestrial area. ▪ % of UAA under Natura 2000 ▪ % of forest area under Natura 2000
Unit of measurement	%
Source	<ul style="list-style-type: none"> • Natura 2000 Barometer (July 2009) provided by DG ENV – ETC_BD

	<ul style="list-style-type: none"> • Natura 2000 Spatial Dataset 1: 100.000 Scale (Mid 2009) <p>Please note that the situation regarding Natura 2000 sites is constantly evolving and therefore these data represent only a 'snap-shot' of the situation at the date précised.</p> <p>Furthermore the updates of the descriptive and spatial database do not occur in the same time and so, normally, the spatial database contains fewer sites than the descriptive database.</p> <ul style="list-style-type: none"> • Member State territory: CLC 2000 database • Total farmland (estimation of UAA): CLC 2000 classes 2xx and 321 • Forest area : CLC 2000 classes 31x

Baseline indicator for context	11 – Biodiversity: Protected forest
Measurement of the indicator	% FOWL protected to conserve biodiversity, landscapes and specific natural elements (MCPFE 4.9, classes 1.1, 1.2, 1.3 & 2)
Definition of the indicator	<p>This indicator relates to Forest and Other Wooded Land (FOWL)</p> <p>Protected areas per se focus on the conservation of biological diversity and the maintenance of natural ecological processes. Protected areas are included as a main pillar in nature conservation laws in all European countries and represent one of the oldest instrument for protecting nature and natural resources.</p> <p>In 2002 new Assessment Guidelines for Protected and Protective Forests and Other Wooded Land in Europe were elaborated and adopted by the MCPFE.</p> <p><u>Protected and protective forests and other wooded land</u> have to comply with the following general principles in order to be assigned according to the MCPFE Assessment Guidelines:</p> <ul style="list-style-type: none"> - Existence of legal basis - Long term commitment (minimum 20 years) - Explicit designation for the protection of biodiversity, landscapes and specific natural elements or protective functions of forest and other wooded land
Subdivisions	<p>This indicator is further broken down according to the MCPFE class of protection, which is defined by the management objective and restrictions to interventions as follows:</p> <ul style="list-style-type: none"> • <u>Class 1: Main Management Objective 'Biodiversity'</u> <ul style="list-style-type: none"> - <u>Class 1.1: 'No Active Intervention'</u> <ul style="list-style-type: none"> → The main management objective is biodiversity. → No active, direct human intervention is taking place → Activities other than limited public access and non-destructive research not detrimental to the management objective are prevented in the protected area - <u>Class 1.2: 'Minimum Intervention'</u> <ul style="list-style-type: none"> → The main management objective is biodiversity → Human intervention is limited to a minimum → Activities other than those listed below are prevented in the protected area: <ul style="list-style-type: none"> - Ungulate/game control - Control of diseases/insect outbreaks - Public access

	<p>- Fire intervention</p> <p>- Non-destructive research not detrimental to the management objective</p> <p>- Subsistence resource use</p> <p>- <u>Class 1.3: 'Conservation Through Active Management'</u> → The main management objective is biodiversity</p> <p>→ A management with active interventions directed to achieve the specific conservation goal of the protected area is taking place</p> <p>→ Any resource extraction, harvesting, silvicultural measures detrimental to the management objective as well as other activities negatively affecting the conservation goal are prevented in the protected area</p> <ul style="list-style-type: none"> • <u>Class 2: Main Management Objective 'Protection of Landscapes and Specific Natural Elements'</u> → Interventions are clearly directed to achieve the management goals of landscape diversity, cultural, aesthetic, spiritual and historical values, recreation and specific natural elements <p>→ The use of forest resources is restricted</p> <p>→ A clear long-term commitment and an explicit designation as specific protection regime defining a limited area is existing</p> <p>→ Activities negatively affecting characteristics of landscapes or/and specific natural elements mentioned are prevented in the protected area</p>
Unit of measurement	% FOWL
Source	MCPFE 2007

Baseline indicator for context	12 – Development of forest area
Measurement of the indicator	Average annual increase of forest and other wooded land areas
Definition of the indicator	<p>The annual average increase is calculated by observing the change over a certain number of years.</p> <p>As applied for the Global Forest Resources Assessment Update in 2005 (FAO, FRA 2005), the definitions of forest and other wooded land are as follows:</p> <p><u>-Forest</u></p> <p>Land spanning more than 0.5 hectares with trees higher than 5 meters and a canopy cover of more than 10 percent, or trees able to reach these thresholds <i>in situ</i>. It does not include land that is predominantly under agricultural or urban land use.</p> <p>Explanatory notes</p> <p>1. Forest is determined both by the presence of trees and the absence of other predominant land uses. The trees should be able to reach a minimum height of 5 meters <i>in situ</i>. Areas under reforestation that have not yet reached but are expected to reach a canopy cover of 10 percent and a tree height of 5 m are included, as are temporarily unstocked areas, resulting from human intervention or natural causes, which are expected to regenerate.</p> <p>2. Includes areas with bamboo and palms provided that height and canopy cover</p>

	<p>criteria are met.</p> <p>3. Includes forest roads, firebreaks and other small open areas; forest in national parks, nature reserves and other protected areas such as those of specific scientific, historical, cultural or spiritual interest.</p> <p>4. Includes windbreaks, shelterbelts and corridors of trees with an area of more than 0.5 ha and width of more than 20 m.</p> <p>5. Includes plantations primarily used for forestry or protection purposes, such as rubberwood plantations and cork oak stands.</p> <p>6. Excludes tree stands in agricultural production systems, for example in fruit plantations and agroforestry systems. The term also excludes trees in urban parks and gardens.</p> <p><u>-Other wooded land</u></p> <p>Land not classified as Forest, spanning more than 0.5 hectares; with trees higher than 5 meters and a canopy cover of 5-10 percent, or trees able to reach these thresholds <i>in situ</i>, or with a combined cover of shrubs, bushes and trees above 10 percent. It does not include land that is predominantly under agricultural or urban land use.</p>
Unit of measurement	Ha/year
Source	<p><u>Global Forest Resources Assessment 2005 (FRA 2005) - FAO</u></p> <p><u>Temperate and Boreal Forest Resources Assessment 2000 (TBFRA 2000) - UNECE/FAO</u></p>

Baseline indicator for context	13 – Forest ecosystem health
Measurement of the indicator	% trees / conifers / broadleaved in defoliation classes 2-4
Definition of the indicator	<p>Deposition of air pollutants on forests is a major stress factor that has been shown to damage leaves and needles or to change soil and water condition and thus affect forest tree health, ground vegetation composition, and ecosystem stability. Air pollution may also predispose trees to the effects of droughts and attacks by fungi and insects.</p> <p>The most important measure used to assess forest condition or health is crown density or defoliation, a measurement of the amount of foliage that a tree carries. By definition, a tree with defoliation greater than 25% is classified as 'damaged'. This comprises the defoliation classes 'moderately damaged' (class 2), 'severely damaged' (class 3), and 'dead' (class 4).</p> <p>Depositions and defoliation are continuously monitored under the UNECE convention on Long-range Transboundary Air Pollution (CLRTAP) by the UNECE International Co-operative Programme on the Assessment and Monitoring of Air Pollution Effects on Forests (ICP Forests).</p>
Subdivision	<p>This indicator is further broken down according to the species groups:</p> <ul style="list-style-type: none"> - Defoliation, all trees - Defoliation, coniferous trees - Defoliation, broadleaved trees
Unit of measurement	% of sampled trees in defoliation classes 2-4
Source	ICP forest - Technical Report 2008,2002

Baseline indicator for context	14 – Water quality
Measurement of the indicator	% territory designated as Nitrate Vulnerable Zone
Definition of the indicator	<p>This indicator aims at giving an idea of the scale of water quality problems and the political importance devoted to this issue.</p> <p>Nitrate vulnerable zones are areas that are under a regime of specific legal requirements aiming at the reduction of water pollution from agricultural sources.</p> <p>The "Territory designed as Nitrate Vulnerable Zone" are the areas of land in the national territory that a Member State has designated as vulnerable zone and notified to the Commission in application of provisions of Article 3(2) and (4) of the Council Directive 91/676/EEC.</p> <p>Note that, the territory designed as Nitrate Vulnerable Zone corresponds to the whole national territory in the case of Member States that, based on provisions of Article 3(4) of Council Directive 91/676/EEC, are exempt from the obligation to identify specific vulnerable zones because they have established and apply action programmes throughout their national territory. However designation of the whole territory does not necessary mean that there is a problem with water quality observed at the whole country.</p>
Unit of measurement	% territory
Source	DG ENV

Baseline indicator for context	15 - Water use
Measurement of the indicator	% irrigated UAA
Definition of the indicator	<p>Agriculture is an essential driving force in the management of water use. New production methods and irrigation play an important role in the development of the agricultural sector, but improvements in agricultural productivity often put a great pressure on natural resources. That is the case of water use for irrigation, especially during dry periods.</p> <p>According to the definition applied in Farm Structure Surveys of Eurostat (Reg. 571/88 and Commission Decision 2000/115) :</p> <p><u>Irrigated area</u> is defined as the area of irrigated crops, i.e. the area of crops which have actually been irrigated at least once during the 12 months prior to the survey date. Crops under glass and kitchen gardens, which are almost always irrigated, should not be included.</p> <p><u>Utilised Agricultural Area</u> consists in the total area taken up by arable land, permanent grassland, permanent crops and kitchen gardens.</p> <p>To ensure consistency with what is measured under "irrigated area", one should take out of total UAA the area of crops under glass and kitchen gardens. Nevertheless, this causes negligible change.</p>
Unit of measurement	%
Source	Eurostat – Farm Structure Survey 2007

Baseline indicator for context	16 - Protective forests concerning primarily soil, water and other ecosystem functions
Measurement of the indicator	FOWL area managed primarily for soil & water protection (MCPFE 5.1 class 3.1)
Definition of the indicator	<p>This indicator corresponds to MCPFE (Ministerial Conference on the Protection of Forests in Europe) indicator number 5.1 "Protective forests – soil, water and other ecosystem functions", class 3.1.</p> <p>It relates to Forest and Other Wooded Land (FOWL)</p> <p>Forests play important roles in the protection of soil or the surface under the forest cover, for instance, for protection against erosion. Forests are also essential for the maintenance of water resources and of water cycles such as the protection of water reservoirs or filtering of water, modification of water cycle and run-off. In addition, protective forests guarantee other important ecosystem functions, like the maintenance of clean air, stabilization of local climate, securing the timber line in alpine and polar areas, etc.</p> <p>For the purpose of this indicator, the <u>forest and other wooded land</u> where the above-stated protective functions are the primary management objective have to be designed in compliance to the "MCPFE Assessment Guidelines for Protected and Protective Forest and Other Wooded Land in Europe", class 3: "Main management objective "Protective Functions", subclass 3.1: "Management clearly directed to protect soil and its properties or water quality and quantity or other forest ecosystem functions".</p> <ul style="list-style-type: none"> • <u>Designated protective areas</u> comply the following principles: <ul style="list-style-type: none"> - Existence of legal basis - Long term commitment (minimum 20 years) - Explicit designation for the protection of biodiversity, landscapes and specific natural elements or protective functions of forest and other wooded land • <u>Class 3: Main management objective "Protective Functions"</u> implies that: <ul style="list-style-type: none"> - The management is clearly directed to protect soil and its properties or water quality and quantity of other ecosystem functions (class 3.1), or to protect infrastructure and managed natural resources against natural hazards (class 3.2). - Forests and other wooded lands are explicitly designed to fulfill protective functions in management plans or other legally authorized equivalents. - Any operation negatively affecting soil or water or the ability to protect other ecosystem functions, or the ability to protect infrastructure and managed natural resources against natural hazards is prevented.

AXIS 3	IMPROVING THE QUALITY OF LIFE IN RURAL AREAS AND ENCOURAGING DIVERSIFICATION OF ECONOMIC ACTIVITY
---------------	--

Baseline indicator for context	17 – Population density
Measurement of the indicator	Population density
Definition of the indicator	<p>This indicator consists in the density of the average total population, i.e. the ratio of the population of a territory on a given date to the size of the territory.</p> <p>Most Member States calculate the average population as the arithmetic mean of the population on 1st January for two consecutive years, with the exception of Germany</p>

	(average of twelve monthly figures), Ireland (mid-April population), United Kingdom (30 June population), Denmark, Spain and Netherlands (1 st July registered population). Area refers to the total land area.
Unit of measurement	Inhabitants / km ²
Source	Eurostat

Baseline indicator for context	18 - Age structure
Measurement of the indicator	% people aged (0-14) y.o. / (15-64) y.o. / >=65 y.o. in total population
Definition of the indicator	<p>This indicator covers the age structure of the whole population. The following age groups are defined for this indicator:</p> <ul style="list-style-type: none"> • Share of people aged 0-14 years old • Share of people aged 15-64 years old • Share of people aged 65 years old and over <p>Population can be either the population on 1 January or the average population during the year. Unless otherwise stipulated, the population on 1 January is used consisting in the inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31 December of the previous year). The population is based on data from the most recent census adjusted by the components of population change produced since the last census, or based on population registers.</p>
Subdivision	<p>This indicator is broken down according to the following age groups:</p> <ul style="list-style-type: none"> • Share of people aged 0-14 years old • Share of people aged 15-64 years old • Share of people aged 65 years old and over
Unit of measurement	%
Source	Eurostat

Baseline indicator for context	19 - Structure of the Economy
Measurement of the indicator	% GVA by branch (Primary / Secondary / Tertiary sector)
Definition of the indicator	<p><u>GVA</u> is defined as the value of output less the value of intermediate consumption.</p> <p>Output is valued at basic prices, GVA is valued at basic prices and intermediate consumption is valued at purchasers' prices.</p> <p>Primary sector covers divisions 01 to 05 or branches A & B of NACE rev.1.1. Secondary sector covers divisions 10 to 45 or branches C to F of NACE rev.1.1. Tertiary sector covers divisions 50 to 95 or branches G to P of NACE rev.1.1. Total refers to GVA in branches A to P of NACE rev.1.1.</p>
Subdivision	<p>This indicator is broken down by branches:</p> <ul style="list-style-type: none"> • Share of GVA in primary sector • Share of GVA in secondary sector • Share of GVA in tertiary sector

Unit of measurement	%
Source	Eurostat - Economic accounts-ESA95 At national level, the following series is more up-to-date, and has been used for the calculation of the EU aggregates: National accounts (including GDP) - Breakdown by 6 branches

Baseline indicator for context	20 – Structure of employment
Measurement of the indicator	% employment by branch (Primary / Secondary / Tertiary sector)
Definition of the indicator	In Economic Accounts, total employment (ESA 1995, 11.11) covers all persons – both employees and the self-employed - in a specific region. In the European Union Labour Force Survey, employment covers all persons in employment that are aged 15 year and having work for pay or profit regardless the number of hours per week. Preferred source is the Economic Accounts. Primary sector covers divisions 01 to 05 or branches A & B of NACE rev.1.1. Secondary sector covers divisions 10 to 45 or branches C to F of NACE rev.1.1. Tertiary sector covers: <ul style="list-style-type: none"> • In Economic Accounts divisions 50 to 95 or branches G to P of NACE rev.1.1. • In Labour Force Survey branches G to Q of NACE rev.1.1. Total refers to employment in branches: <ul style="list-style-type: none"> • In Economic Accounts: A to P of NACE rev.1.1. • In Labour Force Survey A to Q of NACE rev.1.1.
Subdivision	This indicator is broken down by branches: <ul style="list-style-type: none"> • Share of employment in primary sector • Share of employment in secondary sector • Share of employment in tertiary sector
Unit of measurement	% Employment
Source	Eurostat - Economic accounts-ESA95 / Labour Force Survey

Baseline indicator for context	21 – Long-term unemployment
Measurement of the indicator	% long-term unemployment (as a share of active population)
Definition of the indicator	The long-term unemployment rate is the share of unemployed persons since 12 months or more in the total number of active persons in the labour market (according to the methodology of the EU Structural Indicators). Unemployed persons are all persons aged 15 to 74 who were not employed during the reference week, had actively sought work during the past four weeks and were ready to begin work immediately or within two weeks. The duration of unemployment is defined as the duration of the search for a job or as the length of the period since the last job was held (if this period is shorter than the duration of search for a job). Active persons are those who are either employed or unemployed, employed persons

	<p>being all persons aged 15 and over who, during the reference week worked at least on hour for pay or profit, or who were temporarily absent from such work. Family workers are included.</p> <p>All these terms refer to the European Union Labour Force Survey.</p>
Unit of measurement	% of active population
Source	Eurostat - Labour Force Survey

Baseline indicator for context	22 - Educational attainment
Measurement of the indicator	% adults (25_64) with Medium & High educational attainment
Definition of the indicator	<p><u>Educational attainment</u> of a person is the highest level of an educational programme the person has successfully completed. The International Standard Classification of Education (ISCED) 1997 is the standard classification on educational attainment at EU level.</p> <p>The expression 'level successfully completed' must be associated with obtaining a certificate or a diploma.</p> <p>The denominator consists of the total population of the same age group, excluding "no answers" to the question 'highest level of education successfully completed'. Both the numerator and the denominator come from the European Union Labour Force Survey.</p> <p>Based on ISCED 1997, the following levels are taken into consideration:</p> <ul style="list-style-type: none"> - Low: ISCED levels 0 to 2 i.e. pre-primary, primary and lower secondary education. Persons with no education (illiterate) are included in the code ISCED 0. - Medium: ISCED levels 3 & 4 i.e. upper secondary and post secondary non-tertiary education. - High: ISCED levels 5 & 6 i.e. tertiary education.
Unit of measurement	% of adults (25_64 y.o.)
Source	Eurostat - Labour Force Survey

Baseline indicator for context	23 - Internet infrastructure
Measurement of the indicator	DSL coverage
Definition of the indicator	<p>DSL coverage is the percentage of the population that is depending on switches equipped for DSL (Digital Subscriber Line) and / or living in houses passed by an upgraded cable. This includes individuals and businesses located too far away from the switches to be reached, underestimating effective coverage.</p> <p>A 2004 Commission Communication {COM(2004) 369: "Connecting Europe at High Speed: National Broadband Strategies"} gave the following definition for broadband: "a wide range of technologies that have been developed to support the delivery of innovative interactive services, equipped with always-on functionality, providing broad bandwidth capacity that evolves over time, and allowing the simultaneous use of both voice and data services."</p> <p>The two main access technologies are DSL and cable modem. Deployment of cable</p>

	<p>modem in scarcely populated areas involves high costs and is not expected to have a significant impact. Moreover, the two access technologies are often overlapping.</p> <p>The data are collected through a survey of telecom operators. As telecom operators are not able to make the difference between residential and business use, broadband data are typically presented in terms of population. This same methodology is used by the Communication Committee (which is made of national regulatory authorities and provide the official data on broadband penetration also for the structural indicators) and by for example the OECD.</p>
Unit of measurement	% population
Source	<p>DG INFSO</p> <p>The file is from Idate, a consultant that made a study for DG INFSO on development of broadband access and providing the breakdown rural/suburban/urban areas A presentation of results will shortly be available in the Benchmarking section of Europa i2010 website.</p> <p>http://ec.europa.eu/information_society/eeurope/i2010/benchmarking/index_en.htm</p>
Notes	<p>Caution: this breakdown rural / suburban / urban areas differs from the OECD definition:</p> <ul style="list-style-type: none"> • Urban areas: areas with population density > 500 inhabitants /km² • Suburban areas: areas with population density > 100 and < 500 inhabitants /km² • Rural areas: areas with population density < 100 inhabitants /km²

ANNEX 3.D

LEAD BASELINE INDICATORS DATA AT REGIONAL LEVEL

Abbreviations & signs used in the datasets for baseline indicators

Abbreviations & signs used in the Data column

n.a.	not available
n.s.	not significant
-	not relevant

Abbreviations & signs used in the Flag column

Quality of the data

b	break in series
c	confidential
e-L2	estimation by L2
i	information (check Eurostat for explanations)
p	provisional
s	estimation by Eurostat
u	unreliable

Different source

When the source used to calculate a value is different from the main source, it is indicated as a flag. To get more information on the sources, please refer to the section "presentation of the sources" in the document "Baseline Indicator Fiches"

stat. data	Statistical data, as opposed to Census data. See the relevant indicator fiche (C18-Age structure – Technical Annex 3.C) for more explanations.
------------	--

FSS	Farm Structure Survey
-----	-----------------------

LFS	Labour Force Survey
-----	---------------------

reg. accounts	Regional Accounts
---------------	-------------------

Different NUTS level of calculation

When the value has been calculated at a NUTS level different than the one indicated in the sheet name, it is precised in the flag column.

NUTS 2 data	The calculation has been made on the basis of NUTS 3 data, except for the countries signalled by this flag.
-------------	---

Different year

When the value given for a NUTS code / MS differs from the main year used for the indicator, it is indicated as a flag.

Different calculation

For some indicators, mainly due to data availability, the value for a given NUTS code may have been calculated in a slightly different way than the one indicated in the fiche (available in Technical Annex 3.C). It is then indicated by a flag.

LFS A_B or G_to_Q For indicators referring to employment, the main source is the National Accounts. For some countries, LFS series have been used. The breakdown by branch used in LFS may not always correspond to the one defined for the indicator, which is signalled in the flag. For more information, please refer to the corresponding indicator fiche (Technical Annex 3.C).

hotels only / sum of available data Some indicators (e.g. O31-Tourism infrastructure) consist in a sum of variables. When one or more of these variables are missing, it is indicated in the flag column.

CHAPTER 4
IMPLEMENTATION OF RURAL DEVELOPMENT
POLICY 2007 - 2013

Foreword

1. The following chapter aims at giving an overview of rural development policy implementation for the period 2007-2013. As it is only the start of the programs, limited information is available. Notably this report will not present any information concerning the monitoring of the measures (number of beneficiaries, hectares covered, etc). In addition to the financial monitoring of Rural Development policy EU-27, information will also be delivered for the EU support provided in this domain to the 3 candidate countries (Croatia, Former Yugoslavian Republic of Macedonia and Turkey).

2. Acronyms used in this chapter

EAFRD	European Agricultural Fund for Rural Development
IPARD	Instrument for Pre Accession – component Rural Development

Table of contents

SECTION 4.1 EAFRD

4.1.1 Overview of the financial plans

Table 4.1.1.1	Financial plans per Member State, programming period 2007-2013
Graph 4.1.1.1	Relative importance of axes within the EAFRD contribution for the 2007-2013 programming period by Member State
Graph 4.1.1.2	Main rural development measures of the 2007-2013 programming period at Member State level
Graph 4.1.1.3	Comparison of financial contribution per axes and measure 511 (and if relevant 611) of the 2007-2013 programming period at Member State level

4.1.2 Overview of the financial execution

Table 4.1.2.1	Rural development support (EAFRD) to beneficiaries per country until the end of 2008 in € by Member State - programming period 2007-2013
Table 4.1.2.2	Rural development financial support to beneficiaries per measure in the 2007-2013 programming period in € by Member State
Table 4.1.2.3	Rural development financial support to beneficiaries per measure in the 2007-2013 programming period in €, EU-27
Graph 4.1.2.1	Composition of declaration of expenditure (arrived until the end of 2008) per axis (and measures 511, 611) by Member State

SECTION 4.2 IPARD

4.2.1 Overview of the financial plans

Table 4.2.1.1	Maximum EU Contribution for IPARD in €, 2007-2011
Table 4.2.1.2	Financial Plan per Priority axes of IPARD in €, 2007-2011
Table 4.2.1.3	Indicative financial breakdown by IPARD measure in €, 2007-2011
Table 4.2.1.4	Indicative allocation of EU contribution by measure 2007-2011 in € for monitoring purposes
Graph 4.2.1.1	IPARD Funds – Share of total amount available in the programmes at country level, 2007-2011
Graph 4.2.1.2	Relative importance of axes and measure 501 within IPARD for the period 2007-2011
Graph 4.2.1.3	Comparison of the financial allocation between IPARD measures, 2007-2011
Graph 4.2.1.4	Relative importance of IPARD measures within axis for the period 2007-2011 by axes
Graph 4.2.1.5	Relative importance of "Investments in agricultural holdings" IPARD measure within EU contribution for the 2007-2011 period
