

# COMMISSION OF THE EUROPEAN COMMUNITIES

COM(80) 452 final

Brussels, 16th July 1980

PROPOSAL FOR A COUNCIL REGULATION (EEC)  
CONCERNING THE DISTRIBUTION AMONG THE MEMBER STATES  
OF THE TOTAL CATCH POSSIBILITIES AVAILABLE  
TO THE COMMUNITY IN 1980 OF STOCKS OR GROUPS OF STOCKS  
OCCURRING IN THE COMMUNITY FISHING ZONE

---

(presented by the Commission to the Council)

COM(80) 452 final

EXPLANATORY MEMORANDUM

In its Declaration of 30 May 1980 the Council, in respect to allocation of resources among member States, lays down the following guidelines:

"In compliance with the Treaties and in conformity with the Council Resolution of 3 November 1976 (the "Hague Agreement"), ... policy should be based on the following guidelines:

(a) ...

(b) fair distribution of catches having regard, most particularly, to traditional fishing activities, to the special needs of regions where the local populations are particularly dependent upon fishing and the industries allied thereto <sup>(1)</sup>, and to the loss of catch potential in third country waters;

...

(1) See paragraph 3 and 4 of Annex VII to the Council Resolution of 3 November 1976."

The Commission has interpreted the first criterion, that of traditional fishing, as the average of fishing by member States in the base period 1973 to 1978. Insofar as 1978 catches are concerned account was taken of catches only to the extent that they did not exceed the quotas proposed by the Commission for the year 1978.

Various criticisms of this interpretation of traditional catches have been made by member States. These include, for example, that:

- earlier years should be incorporated
- 1978 should be left out of the average as the quota proposals of the Commission for that year already contain particular advantages for certain member States
- 1979 should be included.

.../...

The Commission, having considered these contradictory criticisms very carefully, maintains its proposed reference period and its manner of dealing with 1978 catches as being a suitable basis for satisfying the criterion.

In maintaining this position the Commission takes account that the purpose of all the criteria laid down by the Council, when taken together, is to provide a fair allocation of resources.

The second step towards reaching quota proposals was to apply the guarantees or preferences decided by the Council Resolution of 3 November 1976 to the average catches 1973/1978 in the context of the TACs already decided for 1980. The resultant Table has been sent to the Council (document 8587 Annex I) and revisions have also been circulated (document 8587 Annex II). In making this step the Commission followed the procedures set out in Annex III of its Communication to the Council (COM(80)338 final) of 12 June 1980 but added English ports from Bridlington to Berwick.

In approaching the question of compensating for third country losses the Commission takes account of jurisdictional losses in third country waters and in joint stocks.

The Commission has sought principally to establish what, among member States, would be their proportionate shares of losses and gains and, secondly, what orders of magnitude would emerge. The Commission has considered a number of possible ways of calculating; it has arrived at the conclusion that the approach described later offers a useful starting point. On the other hand it is but a tool which cannot by itself be the answer to the problem posed.

As is well recognised, the totality of third country losses cannot simply be squeezed into historic fishing patterns within Community waters, partly because sufficient resources in the various species do not exist within the Community, partly because the disturbance to traditional fishing would not only be very grave but, in certain cases, would go beyond physical limits and partly because neither the Community as a whole nor any of the relevant member States can expect to emerge without some consequences for their fishing industries brought about by world-wide extensions to 200 miles fishing limits which, in turn were inspired and justified by increasing scarcity of resources.

The analysis, nevertheless, does provide one of the bases on which the Commission could decide upon a rational order of compensation; other bases being considerations of the kind just mentioned. In the opinion of the Commission a fair distribution of catches may be achieved by the application of the criteria contained in the Council Declaration of 30 May in the light of these overall realities.

In making arithmetical calculations jurisdictional losses were added to the catch possibilities known to exist in third country waters in 1980 and both were added to the average catches for 1973/1976 by member States on Community internal and joint stocks. This gave the total catch which each member State and the Community would have had in 1980 had no change intervened (hypothetical catch). The Commission then compared this hypothetical catch with actual possibilities in 1980 both internally and externally and found thereby the average percentage decline in the overall Community fishing - the Hague areas, which for this purpose includes fishing exercised under the existing France/Canada agreement because of its importance for St Pierre et Miquelon, being separately dealt with thereafter as they were excluded from compensation liability. The Community average percentage loss, so calculated, was then applied to each member State thus showing gains and losses from the mean.

These calculations were applied to cod, haddock, saithe, whiting, plaice and redfish in all of which there were jurisdictional losses; in the case of herring a theoretical calculation, which follows the same method, is possible if certain assumptions about future catch possibilities for the Community in stocks which are now under zero TACs are made.

The Annex is a summary table which shows for the species cod, haddock, saithe, whiting, plaice and redfish the effect of the application of the criteria in the Council Declaration of 30 May 1980 in cod equivalent (the cod equivalent being arrived at by giving the value of one to cod, haddock and plaice; 0.87 to redfish; 0.86 to whiting and 0.77 to saithe; for mackerel the equivalent is 0.30).

The first line is a computation of availabilities in 1980, internal and external divided as to internal on the basis of 1973/1978 averages (following the elimination of catches in excess of the Commission proposed quotas for

.../...

1978) and as to external on the basis of pragmatic experience. The second line corrects the first line through use of the Hague Resolutions and the third line shows the result of the correction for the third country losses.

A theoretical examination of the application of the described approach on a stock-by-stock basis, including putative herring calculations, confirmed that resultant quotas for the species in question in the North Sea (and elsewhere in certain cases) could be reduced well below traditional fishing activities and even well below any rational level of economic fishing activity; in some cases even important fisheries would be virtually eliminated. While there are important stocks of some of these species elsewhere in Community waters the Community as such would be acting contrary to the notion of a rational division of fishing effort if it were to encourage recipient member States to take up fisheries in which they have neither had a place nor shown any interest.

Some member States might be largely locked out from continuing a viable fishing activity in the North Sea. In this respect, had there never been major fisheries in third country waters, there is no reason to believe that fishing patterns in the North Sea would have been arrived at historically by the exclusion or virtual exclusion of some riparian States from major stocks for the benefit of the remainder.

Line four of the table is the Commission's proposal concerning, in cod equivalent, the transfers that should be taken into the quota proposals for 1980. The Commission in the light of all that precedes considers that any greater transfer in one operation is beyond the bounds of a rational and reasonable approach and reserves the question of whether and to what extent further transfers should be made in subsequent years. If particular problems arise in the application of the proposal at the stock-by-stock level the Commission reserves the possibility of making necessary adjustments.

Line five is the resultant total catch possibilities in 1980 of the species actually covered.

The Commission in arriving at precise quota proposals consolidates some very minor fisheries with more important fisheries conducted by each of the member States. No member State loses in this transaction but the resultant pattern

of fishing is more economic and control problems are reduced. In this latter exercise certain erroneous catch reporting figures (for example, put down mistakenly as IIIa when the real location of the catch was ICES sub-zone IV) were re-attributed and quota proposals made accordingly. Quota figures are rounded to the nearest zero in virtually all cases.

In a number of species mainly fished for industrial purpose the Commission does not propose national quotas as the stocks concerned may be fished at will provided that Community and other legitimate conservation or control measures are respected.

The Commission also draws the conclusion from this study that it remains very important indeed to preserve and improve the Community's fishery possibilities in third country waters to the greatest degree.

ACFM is presently examining, at the request of the Commission, some TAC figures for 1980. Furthermore, some TACs continue to be based on actual catches rather than biological data. Because of the recent extension to 200 miles of fisheries jurisdiction in Greenland waters TACs covering this new area also may have to be considered. Each of these factors may justify the Commission amending its present quota proposals at a future date and the Commission also reserves this possibility.

The Commission reserves the right to make corrections for possible calculation errors in the light of the discussions of the Council.

Proposal for a

COUNCIL REGULATION (EEC) N° /

concerning the distribution among the member States  
of the total catch possibilities available to the  
Community in 1980 of stocks or groups of stocks  
occurring in the Community fishing zone

---

Proposal for a  
COUNCIL REGULATION (EEC) No. /

concerning the distribution among the member States of the total catch possibility available to the Community in 1980 of stocks or groups of stocks occurring in the Community fishing zone

THE COUNCIL OF THE EUROPEAN COMMUNITIES,

Having regard to the Treaty establishing the European Economic Community, and in particular Article 43 thereof,

Having regard to Council Regulation (EEC) No. 754 /80<sup>(1)</sup> concerning, for certain fish stocks occurring in the Community fishing zone, the fixing for 1980 of the total allowable catches, the share available for the Community and the means of making the catches, and in particular Article 1 thereof,

Having regard to the proposal from the Commission,

Having regard to the opinion of the European Parliament<sup>(2)</sup>,

Whereas Council Regulation (EEC) No. 754/80 has already fixed the total allowable catches (TACs) for 1980 for fish stocks or groups of stocks occurring in the Community fishing zone and allocated shares in these TACs to non-member coastal states pursuant to fishing agreements with them;

whereas, in order to ensure the effective management of the fish stocks, it is necessary to make a distribution of the total catch possibilities available to the Community in 1980 among the member States and that this distribution should be equitable;

whereas the fair distribution among the member States of the total catch possibilities available to the Community is made, having regard, most particularly, to traditional fishing activities, to the special needs of regions where the local populations are particularly dependent upon fishing and the industries allied thereto, and to the loss of catch potential in third country waters;

---

(1) O.J. No. L 84 of 28.3.1980, p. 36

(2) O.J. No.

Whereas, in the appreciation of specific needs account must be taken of this Resolution of the Council of 3 November 1976 and in particular the contents of paragraphs 3 and 4 of Annex VII thereof;

whereas the distribution must, therefore, take into account the continued steady development of the Irish Government's fisheries development programme for coastal fishing, involving for Ireland quotas for 1980 on the basis of doubling its 1975 level of catch by 1979 and, furthermore, in order to protect the vital needs of certain other regions particularly dependent on the fishing industry priority must be given to coastal fishermen of Greenland, Scotland, Northern Ireland, the Isle of Man and that part of England comprised between the ports of Bridlington to Berwick;

whereas, when the quantities allocated to Ireland, the United Kingdom and Denmark under the Council Resolution of 3 November 1976 have been deducted from the total catch possibilities available for the member States, the remainder is allocated to each member State on the basis of the average catches for the years 1973 to 1978 (account being taken in 1978 of fishing not in excess of the quotas proposed by the Commission for that year<sup>(1)</sup>), and account being taken of transfers between member States to compensate reasonably for loss of catch possibilities in third country waters consequent to the general extension of fishing zones to 200 miles;

HAS ADOPTED THE FOLLOWING REGULATION:

---

(1) COM(78) 282 final of 13.6.1978  
COM(78) 435 final of 31.8.1978  
COM(78) 493 final of 22.9.1978  
COM(78) 493 final/2 of 6.10.1978

Article 1

The distribution among the member States of the Community's share of the total allowable catches for 1980, by stock or group of stocks occurring in the Community fishing zone, is set out in the Annex.

Article 2

This Regulation shall enter into force on 1 January 1980.

This Regulation shall be binding in its entirety and shall be directly applicable in all member States.

(1) In this Regulation the Skagerrak is delimited on the West by a line drawn from the Hanstholm lighthouse to the Lindesnes lighthouse and on the South by a line drawn from the Skagen lighthouse to the Tistlarna lighthouse and from this point to the nearest point on the Swedish coast.

(2) In this Regulation, the Kattegat is delimited on the North by a line drawn from the Skagen lighthouse to the Tistlarna lighthouse and from this point to the nearest point on the Swedish coast and on the South by a line drawn from Hasenøre Head to Gniben Point, from Korsnæs to Soodsbjerg and from Gilbjerg Cape to Kullen.

(3) No fishery for this quota may take place within 4 miles of the baselines of the Kingdom of Norway and the Kingdom of Sweden.

(4) No fishery for this quota may take place within 3 miles of the baselines of the Kingdom of Sweden.

(5) Fishing for this quota may not take place, in the Skagerrak, within 12 miles of the baselines of the Kingdom of Norway and of the Kingdom of Sweden respectively and, in the Kattegat, within 12 miles of the baselines of the Kingdom of Sweden.

- (1) By-catches of herring landed at the end of each voyage shall not exceed 10% by weight of the catches of sprats and 5% by weight of the catches of other species. The by-catches landed will be deducted from the quantities to be allocated to each Member State.
- (2) Fishing for herring is forbidden in the Skagerrak from 1 January to 31 March 1980 and from 1 October to 31 December 1980. Notwithstanding this provision, fishing by Danish vessels with types of gear other than trawl and performed by vessels not exceeding 90 feet shall be allowed inside two nautical miles from the baselines.
- (3) By-catches of herring landed from the Kattegat at the end of each voyage shall not exceed 15% by weight of the catches of sprats and 5% by weight of the catches of other species. The by-catches landed will be deducted from the quantities allocated to each Member State.
- (4) Trawling and purse seining is prohibited in the Skagerrak from Saturday midnight to Sunday midnight and in the Kattegat from Friday midnight to Sunday midnight.
- (5) Fishing for this quota may not take place within 4 miles of the baselines of the Kingdom of Norway and the Kingdom of Sweden, respectively.
- (6) Fishing for this quota may not take place within 3 miles of the baselines of the Kingdom of Sweden.
- (7) Fishing for this quota may not take place within 12 miles of the baselines of the Kingdom of Sweden.

(1) Fishing is forbidden within 12 miles of the baselines off the East Coast of Ireland and of Northern Ireland between 53°00'N and 55°00'N for the entire year.

(2) ICES Zone VIIa is reduced by the zone added to the Celtic Sea bounded by :

- latitude 52°30'N on the North
- latitude 52°00'N on the South
- the Coast of Ireland on the West
- the Coast of the United Kingdom on the East.

(3) By-catches of herring landed at the end of each voyage shall not exceed 10 % by weight of the catches of sprat and 5 % by weight of the catches of any other species.

(1) Reference is to the herring stock in the Irish Sea (ICES Zone VIIa) excluding the zones referred to in footnote (2) below and footnote (1) to the Mourne Stock above.

(2) ICES zone VIIa is reduced by the zone added to the Celtic Sea bounded by :

- latitude 52°30'N on the North
- latitude 52°00'N on the South
- the Coast of Ireland on the West
- the Coast of the United Kingdom on the East.

(3) By-catches of herring landed at the end of each voyage shall not exceed 10 % by weight of the catches of sprat and 5% by weight of the catches of other species. The by-catches landed will be deducted from the quantities to be allocated to each Member State.

(4) Fishing for herring is forbidden in the Irish Sea (ICES Division VIIa) throughout the whole year within 12 miles of the coasts of England, Scotland and Wales between latitudes 53°20'N and 55°00'N and from 22 September to 16 November 1980 in that part of the Irish Sea (ICES VIIa) North of latitude 53°30'N.
