# RESULTS OF THE BUSINESS SURVEYS CARRIED OUT AMONG HEADS OF ENTERPRISES <br> IN THE COMMUNITY 

MONTHLY BUSINESS SURVEY (ECONOMIC TRENDS)

## PRESENTATION OF THE RESULTS

This issue summarizes the results of the monthly business surveys carried out between the end of December 1969 and the end of May 1970. It comprises four chapters-industry as a whole, consumer goods, capital goods, and intermediate goods-each with comments illustrated by diagrams and tables displaying the relevant data for each participating country and for the Community as a whole. The data relating to specific industries are given only for the Community as a whole and will be found in a consolidated table at the end of the brochure. For Luxembourg, the data given concern only industry as a whole; the relatively small number of firms in this country makes it practically impossible to publish a breakdown for the three types of industry without disclosing confidential information.

All the member countries contribute to the survey on a voluntary basis. Dutch companies and their trade federations have so far considered that for reasons of industrial secrecy they could not take part in the survey. After negociations with the trade federations concerned, the "Centraal bureau voor de statistiek" has, however, been carrying out the business survey since September 1969 in accordance with the Community plan in certain industrial sectors, and it hopes to extend the survey gradually to the remaining sectors. The first results cannot be published in the present Report as they are still incomplete, but they will be included at a later date.

In the EEC Business Survey the data concerning the Community as a whole have been calculated on the basis of information obtained from the five participating countries, whose aggregate contribution to the Community's industrial production is more than $90 \%$. However, as concerns individual industries, overall Community data are reckoned only in those cases where they are deemed sufficiently representative: thus, for the man-made fibre branch no figure is given, since no results can at present be included for the Federal Republic of Germany.

The classification of the main sectors of economic activity is based provisionally on the nomenclature given below. It is intended in the future to provide a more detailed breakdown, with a classification based on the main end-uses for each product.

## INDUSTRIES PRODUCING CONSUMER GOODS <br> INDUSTRIES PRODUCING CAPITAL GOODS <br> INDUSTRIES PRODUCING INTERMEDIATE GOODS

| Garments and knitted and crocheted goods | Building materials | Textiles |
| :---: | :---: | :---: |
|  | General equipment products | Leather |
| Footwear and processing of leather | Mechanical equipment (other than electrical) | Wool and cork |
| Consumer chemicals |  | Paper |

| Metal consumer articles | Shipbuilding, aircraft manufacturing, railway and tramway | Basic chemicals |
| Domestic electric appliances | rolling stock | Chemicals for industrial and agricultural uses |
| Private cars |  | Petroleum |
| Photographic goods, spectacles, watches and clocks |  | Iron and steel and primary processing thereof |
|  |  | Production of man-made fibres |
|  |  | Rubber |
|  |  | Non-ferrous metals industry |

## INDUSTRY AS A WHOLE

Managements believe that the boom which in the past few months has been in evidence THROUGHOUT THE COMMUNITY has probably run out of steam, not only because production facilities are stretched to capacity but sometimes also because the pressure of demand has slackened. Nevertheless, there are still serious disequilibria, and inflationary pressures persist. Total order books probably shortened appreciably. At the end of May $26 \%$ of industrialists considered that they were "above normal", as against $33 \%$ at the end of December. Stocks of finished products, which had been severely depleted, have built up again. Production is still expected to go up, but answers to the survey suggest that the pace of growth may slow down: the percentage of managements expecting output to gather momentum in the next few months fell from 29 at the end of December to 17 at the end of May. Expectations regarding selling prices currently point to a smaller rise than at the end of last year.

In GERMANY, demand continues to exert unduly heavy pressure on the production apparatus, but managements have become less optimistic in recent months. At the end of May $85 \%$ of them judged their total order books to be "normal" or "above normal", as against $90 \%$ at the end of December. As regards exports, the percentage expecting an increase was 90 at the end of May, compared with 80 at the end of December: the pessimistic outlook after revaluation has disappeared, and managements now believe that they can compete effectively. An increasing number of managements thought that stocks of finished products were "above normal". Opinions on the prospects for production are less favourable than at the end of 1969, for at the end of May $11 \%$ of managements were predicting a faster rate of production, against $18 \%$ at the end of December. The period of operations covered by orders has not shortened since December. Managements feel that strain in respect of selling prices is likely to ease somewhat.

In FRANCE, managements report that the pressure of domestic demand has eased somewhat in recent months, mainly for consumer goods. At the end of May $31 \%$ of managements considered that their total order books were "above normal", compared with $40 \%$ at the end of December. Export demand remained livelier: the corresponding figure was $46 \%$ both at the end of December and at the end of May. The surveys seem to indicate that stocks of finished products built up substantially. Production expectations showed that managements were less optimistic: at the end of May $24 \%$ of them expected production to go up in the next few months, as against $32 \%$ at the end of December, suggesting that the growth rate may slow down somewhat. The pressure on selling prices has probably eased a little.

In ITALY, the fact that there is still some social unrest and disturbances resulting from the production losses make the surveys difficult to interpret. Opinions on the trend of domestic and export demand are fairly favourable: at the end of May, as at the end of December, $20 \%$ of managements considered that their total order books were "above normal". For export order books, the figure was $13 \%$ over the same period. Production expectations were still favourable but tending to deteriorate: at the end of May $90 \%$ of industrialists considered that the current rate of activity would be maintained or increased in the coming months, as against $95 \%$ at the end of December. Expectations as regards selling prices pointed to a certain easing of pressure.

In BELGIUM, managements' replies have been distinctly less favourable in recent months. Reports on total and export order books have become more pessimistic since the autumn of 1969. The percentage of managements which considered that their total order books were well filled fell from 24 at the end of December to 14 at the end of May. For export orders, the percentages were 22 at the end of December and 12 at the end of May. Over the same period reports concerning stocks of finished products gradually deteriorated: at the end of May $16 \%$ of the firms questioned considered stocks to be "above normal", as against $11 \%$ at the end of December. Production expectations have become distinctly more pessimistic: at the end of May $14 \%$ of industrialists expected their production to go up, as against $24 \%$ at the end of December. The pressure on selling prices has probably eased.

In LUXEMBOURG, the surveys show that total and export order books are tending to stabilize. Stocks of finished products are still low. Opinions of managements on the future trend of production remain optimistic, though slightly less so than before. The tendency for selling prices to rise appears to be weakening.

## INDUSTRY AS A WHOLE

## Trend in production

## INDUSTRY AS A WHOLE

Trend in selling prices

## CONSUMER GOODS

In GERMANY, the surveys show that the pace of expansion in the consumer goods industries has been slightly less vigorous in recent months. On the whole, managements' reports on the recent trend of demand reflected a slight decline, but opinions on the future trend of exports improved. Stocks of finished products rose appreciably: at the end of May, $22 \%$ of industrialists considered that their level was "above normal", as against $9 \%$ at the end of December. Production expectations are still fairly optimistic, for at the end of May $92 \%$ of managements expected production to remain unchanged or increase, as against $94 \%$ at the end of December. The period of operations covered by orders on hand nevertheless shortened slightly. The pressure on selling prices appeared to ease a little.

In FRANCE, the surveys show that activity in the consumer goods industry has been less dynamic. On the whole, managements' reports on the trend of overall demand have become less favourable; at the end of May, $9 \%$ considered that total order-books were "above normal", as against $29 \%$ at the end of December. Opinions on export demand, by contrast, have shown an improvement. Stocks of finished products appear to have expanded. Production expectations were sensibly less favourable: at the end of May, $15 \%$ of industrialists expected their output to increase, as against $30 \%$ at the end of December.

In ITALY, managements have remained rather optimistic about the trend of orders. The percentage of managements which considered that their total order-books were "above normal" fell from 21 at the end of December to 19 at the end of May while for export order-books the percentages were 11 at the end of December and 28 at the end of May. Stocks of finished products are still reported relatively low. Production expectations have become less optimistic: at the end of May, $87 \%$ of managements expected that activity would remain the same or increase in the months ahead, as against $96 \%$ at the end of December. Managements foresaw a distinct increase in selling prices.

In BELGIUM, the trend in the consumer goods industries has become sensibly less dynamic. Overall demand appears to have slown down clearly: at the end of May, $57 \%$ of industrialists reported a "normal" or "above normal" level of total order-books, as against $72 \%$ at the end of December. Stocks of finished products built up a little. Opinions of managements on the future trend of production have become less favourable: at the end of May, $76 \%$ expected their production to remain unchanged or increase, as against $84 \%$ at the end of December. The period of operations covered by orders on hand has shortened slightly.

In the COMMUNITY AS A WHOLE, activity in the consumer goods industries appears to be less buoyant: managements' reports on their total order-books are less favourable. Stocks of finished products have been stepped up. Production expectations show a slight slow down. The pressure on selling prices has probably eased somewhat.

In the non-durable consumer goods industries, total and export order-books are reported to be less well filled. Stocks of finished products have probably increased while production expectations are slightly less optimistic.

In garments and knitwear, total orders have been declining, stocks are higher and production expectations are less favourable. In leather and footwear, demand is reported less firm and production expectations slightly less favourable.

Reports on order-books in consumer durables deteriorated a little. An increasing percentage of managements considered that stocks of finished products were "above normal". Production expectations nevertheless remained rather optimistic. In the motor-vehicle industry, domestic and export demand remained firm, stocks were run down and production expectations are still good. As regards metal consumer articles and domestic electric appliances, order-books shortened slightly and stocks rose, but opinions on the future trend of production remained optimistic.

## CAPITAL GOODS

In GERMANY, according to the surveys, business in the capital goods sector is very brisk. Managements again reported favourably on the trend of total demand: at the end of May, $91 \%$ considered the level of total orders to be "normal" or "above normal", as at the end of December. Opinions on the future trend of export demand have improved further. Stocks of finished products have probably risen a little. The opinions of managements on the future trend of production remain very optimistic: at the end of May, $98 \%$ expected the present rate of activity to continue or accelerate, as against $97 \%$ at the end of December. The period of assured activity has also lengthened further. In conclusion, the growth rate can be expected to remain high until the end of the year.

In the industries associated with building, demand has slackened somewhat and stocks of finished products have built up but production expectations are still definitely rising.

In FRANCE, the surveys show that the pressure of domestic and export demand has slightly slown down as against the high level at the end of 1969: at the end of May, $77 \%$ of managements considered that total order-books were "normal" or "above normal", as against $81 \%$ at the end of December. The trend for export demand was similar. According to the surveys, stocks of finished products increased. Nevertheless, production expectations still show that managements are optimistic: at the end of May, $92 \%$ expected the present rate of activity to be maintained or to increase as against $94 \%$ at the end of December. Price predictions foreshadowed less strain.

In the industries associated with building, domestic demand contracted somewhat and stocks rose, strongly influenced by the weather; production expectations nevertheless improved again.

In ITALY, expansion in the capital goods sector has remained very lively in recent months. Domestic demand has forged ahead: the percentage of managements which considered that their total order-books were "normal" or "above normal" rose from $76 \%$ to $79 \%$ between the end of December and the end of May. Stocks of finished products remained very low. Production expectations still reflect optimism among managements: at the end of May, $91 \%$ expected the present pace to be maintained or to gather momentum.

In the industries associated with building, demand slackened appreciably and stocks of finished products rose; the outlook for production was nevertheless still considered to be good.

In BELGIUM, business in the capital goods sector remained lively. Managements' reports on the trend of demand were fairly favourable: at the end of May, $18 \%$ reported the level of total orders to be "below normal", as against $17 \%$ at the end of December. For export orders, the percentages were 18 and 20 . Stocks of finished products are likely to have risen appreciably. The period of assured operations probably shortened slightly. Production expectations have remained favourable: at the end of May, $86 \%$ of managements expected the present rate of activity to be maintained or to accelerate in the next few months, as against $87 \%$ at the end of December. The trend of selling prices was still upward.

In the industries associated with building, production expectations remained optimistic, although demand was declining, but stocks have somewhat risen.

In the COMMUNITY AS A WHOLE, the latest surveys reflected a still dynamic trend in the capital goods sector. Overall demand is reported to be still very lively: at the end of May, $84 \%$ of managements questioned considered that their total order-books were "normal" or "above normal", as against $85 \%$ at the end of December. Production expectations were still very dynamic and suggested that a relatively high level of activity will be maintained in the near future.

In the commercial vehicle industry, order-books have shortened a little and stocks of finished products have risen but production expectations are still favourable. In the general equipment industry, the order-books have slackened slightly and stocks have risen, but the trend of activity remains favourable. As for mechanical equipment (other than electrical), domestic orders were still heavy and opinions on the future trend of production have remained optimistic. In the electrical equipment industry, the trend is favourable, order-books are still well filled and production expectations excellent.

## INTERMEDIATE GOODS

In GERMANY, the situation in the intermediate goods industries has become less favourable. Reports on total order-books deteriorated: at the end of May, $19 \%$ of managements considered their total orders to be "above normal", as against $33 \%$ at the end of December. Stocks of finished products probably built up a little but production expectations were slightly less optimistic: at the end of May, $94 \%$ of managements expected their plants to be as busy or busier in the months ahead, as against $98 \%$ at the end of December. The period of operations covered by orders on hand is reported to be slightly longer.

In FRANCE, expansion in the intermediate goods sector has slowed down. The volume of total orders has probably declined slightly: at the end of May, $37 \%$ of managements considered their total order-books to be "above normal", as against 45\% at the end of December. The volume of export orders has probably been marking time at a high level. Stocks of finished products have built up again. Managements reported that the trend of production would be somewhat less favourable: at the end of May, $83 \%$ expected production to remain unchanged or go up in the coming months, as against $92 \%$ at the end of December.

In ITALY, where the social disturbances had led to a slowdown, business in the intermediate goods sector has been relatively favourable again in recent months. The buoyancy of demand, particularly domestic demand, was reflected in industrialists' reports on the state of their total order-books: at the end of May, $23 \%$ of managements considered the level of orders to be "above normal", as against $24 \%$ at the end of December. Stocks of finished products were a little heavier. Opinions on the future trend of production were still very optimistic: at the end of May, $90 \%$ of managements still expected that the rate of production would be maintained or actually gather momentum.

In BELGIUM, recent surveys reflected a slight slowdown in the pace of expansion in the intermediate goods sector. Opinions of managements on the state of orders deteriorated: at the end of May, $30 \%$ considered total order-books to be "below normal", as against $12 \%$ at the end of December. For export order-books, the percentage went from 28 to 18 . In the same period, stocks of finished products swelled. At the end of May, $34 \%$ of industrialists expected the present pace of activity to slow down, as against $15 \%$ at the end of December.

In the COMMUNITY AS A WHOLE, the surveys show that the trend in the intermediate goods industry would remain less dynamic. The volume of orders on hand has diminished: at the end of May, $25 \%$ of managements considered the level of total order-books to be "above normal", as against $36 \%$ at the end of December. In the same period, stocks of finished products returned to normal levels. The trend of production is still favourable, but has sensibly fallen off.

In the iron and steel products industry (including primary processing) demand is still very buoyant and production expectations are favourable. In the non-ferrous metal industry the situation is a little less encouraging: order-books have shortened and production expectations are slightly less favourable. The industries serving the consumer goods industries have also registered a slightly less positive trend: the order-books are considered less positively and production expectations have fallen off a little.

In wood and printing, reports indicated that order-books were shortening, stocks were at a higher level and production expectations were less optimistic.

In chemicals, order-books were shortening but expectations regarding future activity are still very optimistic.

In the rubber industry, order-books are still very long and the trend of production excellent.

The three colours (red, grey and blue) show the percentages of the three different answers. The black curves, the scale for which is given between the graphs, show the figures obtained by adding together the percentages weighted as follows
by 0.03 for the answer "above normal "
by 0.02 for the answer "normal"
by 0.01 for the answer " below normal" ;
below normal
normal
above normal
