Eurostat hat die Aufgabe, den Informationsbedarf der Kommission und aller am Aufbau des Binnenmarktes Beteiligten mit Hilfe des europäischen statistischen Systems zu decken.

Um der Öffentlichkeit die große Menge an verfügbaren Daten zugänglich zu machen und Benutzern die Orientierung zu erleichtern, werden zwei Arten von Publikationen angeboten: Statistische Dokumente und Veröffentlichungen.

Statistische Dokumente sind für den Fachmann konzipiert und enthalten das ausführliche Datenmaterial: Bezugsdaten, bei denen die Konzepte allgemein bekannt, standardisiert und wissenschaftlich fundiert sind. Diese Daten werden in einer sehr tiefen Gliederung dargeboten. Die Statistischen Dokumente wenden sich an Fachleute, die in der Lage sind, selbstständig die benötigten Daten aus der Fülle des dargebotenen Materials auszuwählen. Diese Daten sind in gedruckter Form und/oder auf Diskette, Magnetband, CD-ROM verfügbar. Statistische Dokumente unterscheiden sich auch optisch von anderen Veröffentlichungen durch den mit einer stilisierten Graphik versehenen weißen Einband.

Die zweite Publikationsart, die Veröffentlichungen, wenden sich an eine ganz bestimmte Zielgruppe, wie zum Beispiel an den Bildungsbereich oder an Entscheidungsträger in Politik und Verwaltung. Sie enthalten ausgewählte und auf die Bedürfnisse einer Zielgruppe abgestellte und kommentierte Informationen. Eurostat übernimmt hier also eine Art Beraterrolle.

Für einen breiteren Benutzerkreis gibt Eurostat Jahrbücher und periodische Veröffentlichungen heraus. Diese enthalten statistische Ergebnisse für eine erste Analyse sowie Hinweise auf weiteres Datenmaterial für vertiefende Untersuchungen. Diese Veröffentlichungen werden in gedruckter Form und in Datenbanken angeboten, die in Menütechnik zugänglich sind.

Um Benutzern die Datensuche zu erleichtern, hat Eurostat Themenkreise, d. h. eine Untergliederung nach Sachgebieten, eingeführt. Daneben sind sowohl die Statistischen Dokumente als auch die Veröffentlichungen in bestimmte Reihen, wie zum Beispiel „Jahrbücher“, „Konjunktur“, „Methoden“, untergliedert, um den Zugriff auf die statistischen Informationen zu erleichtern.

Y. Franchet  
Generaldirektor

It is Eurostat's responsibility to use the European statistical system to meet the requirements of the Commission and all parties involved in the development of the single market.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of this information, Eurostat has set up two main categories of document: statistical documents and publications.

The statistical document is aimed at specialists and provides the most complete sets of data: reference data where the methodology is well established, standardized, uniform and scientific. These data are presented in great detail. The statistical document is intended for experts who are capable of using their own means to seek out what they require. The information is provided on paper and/or on diskette, magnetic tape, CD-ROM. The white cover sheet bears a stylized motif which distinguishes the statistical document from other publications.

The publications proper tend to be compiled for a well-defined and targeted public, such as educational circles or political and administrative decision-makers. The information in these documents is selected, sorted and annotated to suit the target public. In this instance, therefore, Eurostat works in an advisory capacity.

Where the readership is wider and less well defined, Eurostat provides the information required for an initial analysis, such as yearbooks and periodicals which contain data permitting more in-depth studies. These publications are available on paper or in Videotext databases.

To help the user focus his research, Eurostat has created 'themes' i.e. a subject classification. The statistical documents and publications are listed by series, e.g. yearbooks, short-term trends or methodology, in order to facilitate access to the statistical data.

Y. Franchet  
Director-General

Pour établir, évaluer ou apprécier les différentes politiques communautaires, la Commission des Communautés européennes a besoin d'informations.

Eurostat a pour mission, à travers le système statistique européen, de répondre aux besoins de la Commission et de l'ensemble des personnes impliquées dans le développement du marché unique.

Pour mettre à la disposition de tous l'importante quantité de données accessibles et faire en sorte que chacun puisse s'orienter correctement dans cet ensemble, deux grandes catégories de documents ont été créées: les documents statistiques et les publications.

Le document statistique s'adresse aux spécialistes. Il fournit les données les plus complètes: données de référence où la méthodologie est bien connue, standardisée, normalisée et scientifique. Ces données sont présentées à un niveau très détaillé. Le document statistique est destiné aux experts capables de rechercher, par leurs propres moyens, les données requises. Les informations sont alors disponibles sur papier et/ou sur disquette, bande magnétique, CD-ROM. La couverture blanche ornée d'un graphisme stylisé démarque le document statistique des autres publications.

Les publications proprement dites peuvent, elles, être réalisées pour un public bien déterminé, ciblé, par exemple l'enseignement ou les décideurs politiques ou administratifs. Des informations sélectionnées, triées et commentées en fonction de ce public lui sont apportées. Eurostat joue, dès lors, le rôle de conseiller.

Dans le cas d'un public plus large, moins défini, Eurostat procure des éléments nécessaires à une première analyse, les annuaires et les périodiques, dans lesquels figurent les renseignements adéquats pour approfondir l'étude. Ces publications sont présentées sur papier ou dans des banques de données de type videotex.

Pour aider l'utilisateur à s'orienter dans ses recherches, Eurostat a créé les thèmes, c'est-à-dire une classification par sujet. Les documents statistiques et les publications sont répertoriés par série — par exemple, annuaire, conjoncture, méthodologie — afin de faciliter l'accès aux informations statistiques.

## INTRODUCTION

### **EUROSTAT's statistical requirements:**

In this publication EUROSTAT has confined itself, for 1990 and 1991, to extending the statistical series already begun in previous publications and to describing the Member States' data processing method on direct investment. This will allow the reader to have a better judgement on both the quality and the difficulties in harmonizing the statistics.

The rapid economic and political changes affecting the European Community (EC) and the growing interest in direct investment statistics have changed the Commission's, and thus EUROSTAT's statistical requirements. The Commission must be able to assess the financial and the economic impact of European integration and also the same impact on the countries or economic zones with which it has "privileged" relations. This new requirement has led to the introduction of a new joint EUROSTAT/OECD questionnaire on foreign direct investment flows (see definition below). In principle, data for 1992 should have been harmonized by means of the new questionnaire, at least as regards the new geographical breakdown. Reinvested profits will also be included, since their exclusion greatly restricts analysis (even using harmonized data) and therefore limits interest in the published figures.

### **Basic information used:**

Since 1984, Unit B5 ("Balance of Payments") has held specific, detailed questionnaires on direct investment (cf. questionnaires in annex). This information is forwarded to EUROSTAT by the Central Banks and National Statistical Institutes of the members of the European Community.

A first attempt at analysing these figures rapidly revealed a major lack of coherence in the statistics from national sources: comparison of corresponding bilateral flows between Member States clearly showed that the Member States were recording very different capital movements. These differences could not simply be attributed to the traditional problems encountered in the Balance of Payments, such as the monetary conversion of transactions, the date of recording, etc. In reality, they stemmed from the fact that the concepts employed were very different, the field covered by the statistics varied in size, collection methods were different, classifications were not compatible, etc.

It was therefore necessary to come to grips with the methodological problems. Some information on methodology was available to EUROSTAT (in the form of the Methodologies of the Balance of Payments of some Member States, published by the Office for Official Publications of the European Communities); other information had to be obtained directly from the Member States.

*Some of the methodological divergences could be corrected but numerous others remain. Therefore the reader is strongly advised carefully to consult the methodological annex to this study in order to avoid errors of interpretation which can always arise with statistics which are not fully harmonized.*

### Data processing method:

-at the first stage, EUROSTAT has "raw" data, i.e. data as supplied by a Member State, either using Eurostat's questionnaire or in some other form specific to the Member State.

-at the second stage, a number of adjustments are then made in order to improve the comparability of the figures and allow them to be added together. To that end, the Member States are asked for additional information in order to bring the figures better into line with the OECD benchmark definition. The resulting data are referred to as "harmonized", but the harmonization is far from complete. All the figures published for each Member State are "harmonized" and do not therefore necessarily correspond to the figures published by the Member State itself under the heading "direct investment".

-since all or some of the data were not available in individual cases, it was sometimes impossible to convert from the national classification to the EUROSTAT classification and there were breaks in the series, we were obliged to "estimate" country by country the missing data. That was done as far as possible with the aid of documents relating specifically to the country or using averaging methods. Only the "estimated" data for the entire European Community (EUR12) are published here. It can happen, when it proves impossible to convert directly from the classification in which the raw data are forwarded to that published by EUROSTAT, that certain geographical areas in the publication approximate the geographical areas in the original classification, which differs somewhat from country to country. This occurs in very rare cases when information is available that justifies this type of estimate. The estimate is published with the prior agreement of the Member State concerned and this is stated on the tables themselves. As a rule, details are given of the adjustment and estimation methods for each Member State, but not the estimates themselves.

### Conventions adopted:

All direct investment reported here is calculated without reinvested profits: reinvested profits are those profits which the board of directors of the direct investment enterprise (upon which the direct investor would normally sit) decides not to distribute to the shareholders but to allocate to the development of the enterprise. These are thus notional flows in the Balance of Payments, but are absolutely essential for assessing the profitability of investments. In theory, the direct investor receives income from his direct investment (recorded in the current account balance) and reinvests it immediately in his subsidiary or branch (this reinvestment is then recorded under the "direct investment" heading of the capital balance). In reality, these two inverse but absolutely identical flows do not give rise to any settlement, which explains the difficulty certain Member States have in identifying them. These Member States seem to be tending to include such profits, although they do not naturally constitute a statistic in the Balance of Payments. As in previous editions, therefore, reinvested profits are excluded from the statistical tables. Nevertheless, statistics on direct investment excluding reinvested profits do have a meaning in that they indicate the proportion of saving in one economy transferred to another, whereas reinvested profits are produced and used in the same economic territory. Such statistics can be used to detect the emergence or disappearance of new centres of activity.

The sign convention used in this document is that of the Balance of Payments: capital flows are recorded:

- a) with a + sign if they enter the declaring economy; they may thus be investment in the declaring economy coming from abroad or disinvestment abroad by the declaring economy (repatriation of capital);
- b) with a - sign if they leave the declaring economy; they may be either investment abroad by the declaring economy or disinvestment by foreign countries in the territory of the economy in question.

Consistency between tables is generally respected, unless otherwise indicated. However, certain tables are not compatible with the other data. The reasons for this are explained under each table and the reader is therefore asked to take particular note of the the table footnotes.

## **PART I: methodology of the Member States**

## INTRODUCTION:

This chapter explains in somewhat greater detail the reasons for the difficulties in summing the national statistics of the Member States. The concept of direct investment varies greatly from country to country, although the Member States are tending to move ever closer to the detailed benchmark definition of the OECD and IMF.

Harmonisation of the concepts and methods used in the different countries is still only in its infancy and international comparisons (or aggregation in the case of the EC) are difficult. EUROSTAT is seeking to harmonize national statistics as far as possible to bring them into line with the IMF and OECD recommendations. In practice, this means including investment by households (very high in some countries) for countries which do not include it under "direct investment" and excluding all so-called direct investment flows to and from international institutions. Despite these efforts, very large discrepancies can still be found between the data notified by the Member States. This report sets out again below the OECD's detailed benchmark definition, the definitions used in each Member State and the main sources of discrepancies identified so far.

## I) DEFINITION OF DIRECT INVESTMENT

The conceptual framework of the Balance of Payments restricts the conclusions that can be drawn on the economic importance of such capital for the countries which supply or receive it. The effects on production, employment, etc. cannot be measured through Balance of Payments statistics, which record only the flows which actually "cross" national borders (which is not the case with reinvested profits and local loans for direct investment). The item "direct investment" in the Balance of Payments records only the financial flows (annual, for our purposes here) between two countries. There would be little point in adding these flows to determine total direct investment by one country in another.

Nevertheless, the statistics drawn from the Balance of Payments no doubt give a fairly accurate picture of the increase in volume of this type of international transaction, although these flows can be artificially swollen by the existence of intermediate financing sources (holding companies and the like) through which they pass.

The detailed benchmark definition of international direct investment - OECD Paris 1992 was adopted almost without amendment by the IMF in the Fifth edition of its Balance of Payments Manual. It may be summarised as follows:

### OECD definition

1. A foreign direct investor is an individual, an incorporated or unincorporated public or private enterprise, a government, a group of related individuals, or a group of related incorporated and/or unincorporated enterprises which has a direct investment enterprise - that is, a subsidiary, associate or branch operating in a country other than the country(ies) of residence of the direct investor(s).

2. A direct investment enterprise is defined as an incorporated or unincorporated enterprise in which a single foreign investor either controls 10% or more of the ordinary shares or voting power of an incorporated enterprise - or the equivalent of an unincorporated enterprise - or has an effective voice in the management of the enterprise.

However, sometimes, the 10% limit should be treated with flexibility as other factors can also be taken into consideration to determine a direct investment relationship: a representation on the board of directors, participation in the policy-making processes, material inter-company transactions, interchange of managerial personnel, provision of technical information, or provision of a long-term loan with preferential interest rates.

3. Inward and outward direct investment statistics, to be reported on a calendar-year basis, should cover all directly and indirectly owned subsidiaries, associates and branches where:

-*a subsidiary is defined as an incorporated enterprise in which the foreign investor controls directly or indirectly (through another subsidiary) more than half of the shareholders' voting powers or has the right to appoint or remove a majority of the members of this enterprise;*

-*an associate is one where the direct investor and its subsidiaries control not more than 50% of the voting shares or have an effective voice in the management of that enterprise;*

-*a branch is an unincorporated enterprise in the host country which can be a permanent establishment or office, a partnership or joint venture, real estate, immovable equipment and objects, non-financial intangible assets (such as patents or copyrights) directly owned by foreign investors, or mobile equipment operating within an economy for at least one year."*

In addition, all construction and installation work abroad (except if the installation is carried out by employees of the enterprise who go abroad to do the work and this work is completed in less than one year) should be considered as being undertaken by a direct investment enterprise.

4. Direct investment flows are defined as:

*-for subsidiary and associated companies*

.the direct investor's share of the company's reinvested earnings;

.plus the direct investor's net purchases of the company's shares and loans;

.plus the net increase in trade and other short-term credits given by the direct investor to the company;

*-for branches*

*.the increase in unremitted profits plus the net increase in funds received from the direct investor."*

Loans and short-term balances from fellow subsidiaries and branches to foreign direct investment enterprises, loans by subsidiaries to their direct investors and loans guaranteed by direct investors and defaulted, as well as the value of goods leased by direct investors, should be included in direct investment.

*However, in the case of banks, deposits, bills and short-term loans should be excluded from direct investment.*

The OECD benchmark definition also describes direct investment stocks and profits. Although generally favourable to this definition, the Community Member States diverge from it on numerous points, which we will now examine.

## II) METHODOLOGY OF THE MEMBER STATES

This section will be restricted to each Member State's main divergences from the OECD benchmark definition. We will also indicate the sources of the statistics used and the ways in which they are collected. As a reminder we would point out that:

- the BLEU, Italy and Portugal state that they do not include "indirect" direct investment links, i.e. capital flows between companies "in the same group" but which have no direct holdings of each other's capital ("sibling" enterprises);
- the BLEU, France, Italy and the Netherlands record direct investment flows from or to international institutions. These flows reflect holdings in the capital of international organisations and are recorded by the other Member States with capital transactions in the "official" sector. These flows have therefore been removed and deducted from direct investment in order to achieve better comparability.

### **Belgium-Luxembourg:**

#### Source of data and method of collection:

The Banque Nationale de Belgique collects from the banking system the statistics required to compile the Balance of Payments for the Belgo-Luxembourg Economic Union and forwards to EUROSTAT a geographical balance of the various movements.

#### Discrepancies with respect to the OECD benchmark definition:

At bank level, it is the transactor who decides whether the transaction will be recorded as a direct investment or portfolio investment. No minimum percentage of shares in an enterprise must be held in order to qualify as a direct investor. However, checks may be carried out on transactions in excess of Bfrs 100 million.

Given the nature of the collection system, the BLEU Balance of Payments does not record, either as direct investment or as profits from direct investment, profits not distributed and reinvested in the direct investment enterprise.

Real estate transactions are under a separate heading in the capital account of the BLEU Balance of Payments and are therefore not included in direct investment.

Luxembourg has a large number of holding companies whose international transactions are recorded separately in the BLEU Balance of Payments. Unfortunately, of these transactions, those relating to direct investment are not distinguished from portfolio operations. They are also all recorded as investments (or disinvestments) coming from other countries: holding companies are not therefore considered to have subsidiaries abroad. As a result, it has not been possible to correct the data. Belgium, too, is not for the time being able to identify the nature of its SPEs' flows (Special Purpose Entities). Furthermore, Belgium records as direct investment abroad all the "outgoing" flows and not all the flows of resident direct investors. These problems could be the cause of the major discrepancies with the data of BLEU's partner countries.

Capital flows between companies with direct investment links through commercial credits or leasing are not recorded as direct investment and it was therefore not possible to remove them and include them under "direct investment".

The BLEU information system does not yet allow identification of the economic sector of the enterprise which makes or receives the direct investment. The breakdown of direct investment by sector is not known. In calculating the EUR12 total by sector, the average breakdown of the rest of the Community has been used to compile the BLEU breakdown. The Banque de Belgique plans to reorganize its data collection system in 1995.

**Corrections carried out on national statistics:**

- Real estate transactions have been added (except for 1984).
- Flows with international institutions have been removed.
- The breakdown of direct investment by sector has been entirely estimated for the calculation of the EUR 12 total.

**Denmark:**

**Source of data and method of collection:**

Denmark also uses bank settlements as the source of information on movements in international direct investment. The statistics are published in the annual reports of Danmarks National Bank.

**Discrepancies with respect to the OECD benchmark definition:**

Denmark is far removed from the OECD definition of direct investment flows in that it does not consider any loan between associated companies as a direct investment, whether it is a long- or short-term loan, or a financial or commercial credit. Such is the case for data covering the years 1991 and before. For certain countries where details of the flows are known, the inclusion or exclusion of this type of flow can have significant repercussions on direct investment statistics, particularly in countries where there are many financial holding companies or which have many subsidiaries of this type abroad. In the case of Denmark, it is difficult to say to what extent this exclusion explains the differences between Denmark's figures and those of its partner countries; loans between associated companies are recorded either as "financial loans" or as "commercial loans", or as "other movements of enterprises' capital" and cannot be dissociated from other loans such as bank credits. The main reason advanced by Denmark for the exclusion is that Danish law was very variable on the subject, authorizing loans at certain times in the past and forbidding them at others, which led to major fluctuations in the data series on direct investment. It has not been possible to correct Danish statistics to eliminate this serious discrepancy.

Reinvested profits are calculated by the Danmarks Central Bank, but the detailed figures usually published exclude such profits.

Purchases of real estate effected for non-commercial purposes were not classified as direct investment, as with the case with inter-company loans up to and including 1991.

**Corrections carried out on national statistics:**

Since statistics on purchases of real estate are available, these investments were added to the figures initially supplied by Denmark to EUROSTAT.

In addition, the Danish classifications are somewhat different from those used by EUROSTAT and certain economic sectors and geographic zones do not match up completely. It was therefore necessary to approximate in some cases. The missing data in the sectoral breakdown were estimated using the average EC weighting (calculated from the data available from the Member States) for both inward and outward flows.

**Germany:**

**Source of data and method of collection:**

The Deutsche Bundesbank publishes statistics on direct investment flows in its monthly reports, as well as statistics on annual stocks in its April supplement each year. Resident enterprises must declare their transactions with other countries; the statistics are therefore collected by this means.

**Discrepancies with respect to the OECD benchmark definition:**

The methodology employed by Germany still differs somewhat from that recommended by the OECD, although it is gradually being brought into line. For example, in 1990 Germany lowered from 25% to 20% the threshold for shares to be held in an enterprise in order for an investor to be considered as a direct investor (the OECD recommends a threshold of around 10%).

Germany does not record as direct investment the flows connected with short-term credits, commercial credits, leasing or the balances of inter-company accounts.

**Corrections carried out on national statistics:**

The only correction made to the German statistics was, as in the case of Denmark, to add non-commercial real estate investment, which is no longer included in direct investment by Germany.

For 1989, 1990 and 1991, Germany supplied EUROSTAT with additional information on the sectoral breakdown of direct investment flows in the services sector. The figures are now available for the financial sector, as well as for transport and telecommunications. When calculating the EUR 12 total, only "trade, hotels and catering" and "other services" were estimated in 1990 and 1991.

The Deutsche Bundesbank also publishes statistics on reinvested profits. These figures are not included in the statistical tables in order to maintain comparability of data with the other Member States.

**Greece:**

**Source of data and method of collection:**

The Bank of Greece is only just beginning to collect information on direct investment, which is not yet shown separately in the Balance of Payments. It can be found under various headings such as "capital of enterprises in accordance with Decree No 2687/53", "other enterprise capital" or "real estate investment", and is mixed with other categories of capital (for example, portfolio investment).

Since 1987, inward direct investment in Greece has been subject to the approval of Bank of Greece or the Ministry of the National Economy and must therefore be declared by the enterprises in question. The use of these declarations for statistical purposes seems to have halted since 1990. However, notwithstanding the fact that only investment from abroad is recorded in this way, since Greek investment abroad is not permitted, such "authorized" investments are not necessarily implemented or are implemented for an amount other than that initially stated in the declaration. Spanish and Japanese statistics, where the two collection systems co-exist, one using bank settlements and the other based on administrative authorizations, show clearly that the two series are not convergent, even if they have parallel trends. In addition, the liquidation of foreign investment in Greece is not recorded at present.

**Discrepancies with respect to the OECD benchmark definition:**

Additional problems appear when one examines the definition of direct investment used to establish the series of "authorized" investments. For example, investment in real estate is classified separately; loans between associated companies are not considered as direct investment unless they run for five years or more; there is no minimum threshold for a holding in the share capital of a subsidiary to determine a direct investment between a resident enterprise and a non-resident enterprise. Greater priority is given to the concept of control than to that of ownership.

There is a statistical series on real estate investment in Greece, but the geographical breakdown is not fully detailed.

For calculating the EUR 12 total for 1990 and 1991, the data from the partner countries were used for both inward and outward investment.

**Spain:**

Source of data and method of collection:

Spain has two sources of data on direct investment: one is the "Balance of Payments" on a cash basis and one is "authorizations or verifications", which are administrative documents sent to the Ministry of the Economy and Trade.

The first source allows direct investment to be broken down by country, the second additionally provides a breakdown by economic sector.

The source "authorizations or verifications" may be considered to cover intended investment rather than actual investment. The series from this source is always higher than that from the "Balance of Payments", as some investments are not actually implemented, others are for a different amount, and others are implemented at a later date. Lastly, "authorizations" do not include liquidations..

These two series are generally published together in the Spanish Balance of Payments.

Discrepancies with respect to the OECD benchmark definition:

The Spanish statistics cover virtually all the transactions of enterprises linked by direct investment. In the case of the "Balance of Payments", such a link exists as soon as the investor (a foreign investor in a Spanish enterprise or a Spanish investor in a foreign enterprise) holds at least 20% of the share capital of the direct investment enterprise. In the case of "authorizations", the percentage required rises to 50% for a foreign investor in a Spanish enterprise, but remains at 20% for a Spanish investment abroad.

Real estate investment, which is proportionally very high in Spain, is classified separately.

The recording of direct investment flows by Spain complies with the OECD recommendations, except in the case of short-term credits, which are not included under this heading.

Corrections carried out on national statistics:

Real estate investment has been added. The Bank of Spain supplied a geographical breakdown of direct investment flows (excluding reinvested profits) for 1990 and 1991 in accordance with the new version of the EUROSTAT/OECD questionnaire, which includes real estate investment. Since the correlation between the new breakdown (which will come into effect for the next publication) and the current breakdown is not perfect for certain geographical areas, a number of approximations have had to be made.

The breakdown by branch of the "authorizations" source was used as a basis for the percentage breakdown which was subsequently applied to the totals for the "Balance of Payments" source in order to have compatible figures for the EUR 12 total. The breakdown by sector based on the "authorizations" source is not available for 1991 and was therefore estimated by EUROSTAT on the basis of previous breakdowns.

**France:**

Source of data and method of collection:

The French statistics on direct investment are published annually in the report "Balance of Payments of France". They are taken from returns sent by enterprises to the Ministry of Finance and the Banque de France. Since 1987, statistics on stocks are published.

Discrepancies with respect to the OECD benchmark definition:

Reinvested profits are not at present recorded in the French Balance of Payments. However, the Banque de France estimates the reinvested profits and will shortly be providing final figures two years after the reference period.

In principle, a direct investor must hold a minimum of 20% of the shares in a company in order to qualify as a direct investor, but this criterion is applied with flexibility. From January 1993 onwards, the minimum threshold is 10%.

Of the other types of direct investment, the only ones to be recorded as such are long-term loans of non-financial companies. All loans from associated banks, all short-term credits and commercial credits between related enterprises are recorded under other headings of the Balance of Payments and not under direct investment. The inclusion of short-term loans between affiliates is currently being examined by the Banque de France.

Corrections carried out on national statistics:

Most of the discrepancies compared with the OECD benchmark definition cannot be corrected in the short term. The only correction that was made to the French statistics was therefore to remove capital movements with international institutions, which are usually included under "capital transactions of the official sector" by the other Member States.

**Ireland:**

Source of data and method of collection:

Ireland is currently reorganizing its collection system. Direct investment flows broken down geographically and by sector of activity are not available for the moment.

Discrepancies with respect to the OECD benchmark definition:

These discrepancies cannot be discussed until the new series appears.

Estimates carried out:

All the data for Ireland have had to be estimated. The data from the partner countries were used to determine direct investment flows with the rest of the Community, the USA and Japan. For the other countries, it was assumed that Ireland had a geographical breakdown of investment similar to that of the rest of the Community as a whole.

For the distribution by sector, the method previously described, i.e. the average of the European Community, was applied.

**Italy:**

Source of data and method of collection:

The data collection system in Italy is changing as a result of the liberalization of foreign exchange. Previously, all transactions with other countries had to pass through the banking system, which sent the information to the Italian Foreign Exchange Office (UIC). This obligation was removed in December 1990: all agents conducting transactions with foreign countries are now obliged to complete declaration forms called C.V.S. "Comunicazione valutaria statistica", which are sent directly or via a bank to the UIC. The fact that the notifications are not mandatory no doubt explains the high volume of non-allocated flows found in 1991 (cf. the statistical tables for Italy). Provisional monthly statistical data are published in the statistical bulletin of the Italian Exchange Office. The official statistics appear in the Banca d'Italia's annual report.

In 1991, the important volume of non allocated flows can be explained by the growth of new financial activities, which cannot be matched up with the sectoral breakdown of the publication.

Discrepancies with respect to the OECD benchmark definition:

Until 1988 all holdings in the share capital of companies not quoted on the stock exchange, as well as all stock-exchange transactions for amounts exceeding Lit 30 000 million or which brought a holding to over Lit 50 000 million, were considered as a direct investment.

Since that date, the classification of a transaction as a direct investment depends on the transactor's replies concerning: 1) his long-term interest and / or his active role, 2) his holding a stake of over 20% in the share capital of the enterprise with which the transaction is being conducted. All holding in companies with are not quoted on the stock market are always considered as direct investment. Only transactions of Lit 10 million or above (Lit 20 million from June 1990) are reported.

Reinvested profits are not recorded in the Italian Balance of Payments.

Of the direct investment flows other than equity holdings, only long-term loans are recorded.

Real estate investment is entered under another Balance of Payments heading.

**Corrections carried out on national statistics:**

Investment flows from or to international institutions have been deducted from direct investment.

On the other hand, investment in the real estate sector has been added.

Direct investment by banks, not all of which had been included in direct investment prior to 1988, has been adjusted for those years.

**Netherlands:**

**Source of data and collection method:**

Data collection in the Netherlands is based on a system of mandatory declaration of foreign transactions, either directly or via an approved Netherlands banking establishment.

The data are published in the annual report of the Nederlandsche Bank. Statistics also exist on amounts outstanding.

**Discrepancies with respect to the OECD benchmark definition:**

There is no minimum threshold for an equity holding in order to qualify as a direct investor in the Netherlands. Nevertheless, in practice, a 10% threshold is used as a reference for the direct investment definition.

Reinvested profits are calculated for statistics on investment stocks but are not included in the Balance of Payments.

All other types of direct investment flows as defined by the OECD appear in the Netherlands' statistics.

However, loans by subsidiaries to their parent company are not recorded as recommended by the OECD: they are considered as investments by subsidiaries and not as disinvestments by the parent company.

The last discrepancy, but by no means the least important, are the direct investment flows of "Special Financial Institutions" (SFIs), which are not recorded as direct investment but under "other long-term capital". SFIs are subsidiaries of foreign companies established in the Netherlands for financing, distribution, invoicing purposes, etc. They are approximately equivalent to what are known as "Special Purpose Entities" by the OECD. Their activities clearly distinguish them from traditional production subsidiaries as these flows only "transit" via the Netherlands. Therefore they require a special treatment. The problem is that, for the partner country, transactions with SFIs can be processed with other direct investment flows and recorded as such. The fact that SFIs are treated separately in the Netherlands means that direct investment statistics are not comparable with those of partner countries. However, the Netherlands intends to include them in direct investment statistics.

**Corrections made to national statistics:**

Only the breakdown of flows between "energy" and "chemical industries" was estimated for the EUR 12 total breakdown, using the average for the EC (calculated on the basis of the partner countries' declarations).

**Portugal:**

Source of data and method of collection:

Portugal makes use of bank settlements and processes declarations or requests for authorization for international transactions to draw up its direct investment statistics. These are published annually by the Banco de Portugal.

Discrepancies with respect to the OECD benchmark definition:

The percentage of shares to be held in an enterprise in order to be recognized as a direct investor is 20%.

Reinvested profits are recorded only if they are officially added to the enterprise's capital.

Stock-exchange transactions, unless specifically identified, are recorded as portfolio investment and not as direct investment.

Only long-term loans between associated enterprises are recorded under other direct investment flows.

Corrections made to national statistics:

None.

**United Kingdom:**

Source of data and method of collection:

The Central Statistical Office (CSO) collects data on direct investment by surveying enterprises: there is a compulsory quarterly survey of the largest companies, a compulsory annual survey for the study of flows and income. These data are regularly published in aggregated form in the Pink Book, which presents the Balance of Payments of the UK. Further details are given in Business Monitor MA4.

Discrepancies with respect to the OECD benchmark definition:

The United Kingdom keeps fairly close to the OECD definition. However, the minimum threshold for a holding in a direct investment enterprise is 20% (the same as that recommended for consolidated accounts).

Corrections made to national statistics:

The transactions classified by the United Kingdom as "investment by other UK residents" and "miscellaneous property investment", given only in the general Balance of Payments but not broken down geographically, have been added. 2/3 were attributed to the Community as outward investments and only 1/3 as inward investments. For the breakdown by sector, all these sundry supplementary investments were allocated to "real estate".

Since the questionnaire used by the United Kingdom to record direct investment flows cannot be too detailed, certain flows can be attributed, in a simplistic way, to the country of the parent company or of the direct subsidiary (i.e. contrary to the OECD benchmark definition) whereas the United Kingdom makes efforts precisely to identify capital flows between indirectly associated enterprises. Incorrect geographical breakdowns for 1984 were discovered by chance and have been corrected.

**United States and Japan:**

EUROSTAT has hardly any information on the methods used to compile direct investment statistics in the United States and Japan.

For the United States, EUROSTAT used the data published in the Survey of Current Business, which are very complete and detailed, although a few figures are not given for reasons of confidentiality. The United States normally publishes series on direct investment, including reinvested profits. The latter have been deducted here in the interests of better comparability.

Japan has two series of data on direct investment: one comes from the Balance of Payments compiled by the Bank of Japan, but it lacks detail; the second, which gives a more detailed breakdown by country and a breakdown by sector, is produced by the Ministry of Finance, but these statistics relate to investments "notified" to the Ministry, which do not always correspond to investments actually made.

In addition, the latter source uses the tax year (which begins on 1 April) and not the calendar year as the reference period. In general, we have used the total given in the Balance of Payments and have subdivided it in line with the breakdown given by the Ministry of Finance. In both cases, reinvested profits are not calculated.

### III) MAIN SOURCES OF ASYMMETRY

Eurostat would like to outline below the main sources of asymmetry identified in the light of harmonisation work and the differences in the methodologies and concepts utilised by the Member States. This will enable the reader to gain a more accurate idea of the scale of the work to be done in order to achieve ever sounder statistics.

Depending on the country, the following transactors are or are not considered by definition as investors or potential direct investment enterprises:

**a) the State:** certain countries record all or some of the transactions of their public authorities under a "capital movements of the official sector" or similar heading, whereas others consider that public authorities can be involved in direct investment transactions.

**b) international institutions:** capital flows to and from these institutions may sometimes be recorded as direct investment. Such flows are generally State holdings in the capital of international development aid banks. One can legitimately ask whether the "long-term interest" which must form the basis of any direct investment link is of the same type as that which connects two enterprises to each other.

**c) banks:** bank direct investment flows may be recorded with other bank flows and not with direct investment. It should be remembered that the current OECD definition recommends excluding direct investment from short-term transactions between banks and their subsidiaries.

**d) households:** may also be direct investors. The land or real estate owned by households is often recorded elsewhere or entered under a separate heading if the figures involved are very large. Whether property for letting or secondary residences, these assets should be considered as notional establishments of a direct investment enterprise whose activity is residential property.

It should be noted that the first four causes of asymmetry listed above have mostly disappeared in this study in the case of intra-Community comparisons, but they may continue to be valid for comparisons with non-Community countries.

**e) holding companies:** this term in itself certainly already has different meanings in different countries. It simply may mean a letter box created to exploit the tax advantages of a particular country, it may mean a company which manages the numerous subsidiaries of a large multinational, or it may mean a company created solely for the purpose of providing the parent company access to a financial market, etc. The flows of such companies are frequently recorded separately (BLEU, Netherlands), but in many cases too only resident holding companies are classified separately. Including them may tend to inflate direct investment flows if, in effect, the capital simply enters and leaves the country. Excluding them, on the other hand, produces underestimates if the movements are in one direction only, for example if the capital entering is then redistributed to other subsidiaries in the same country.

**f) differences in the treatment of enterprises undertaking construction, installation, civil-engineering work, etc. abroad** may be the cause of asymmetries between two countries.

#### Differences in defining the link between the direct investor and the direct investment enterprise:

- in certain countries it is necessary to have shares in the direct investment enterprise and these countries often fix a minimum threshold for such a holding (10% threshold recommended by the OECD). In other countries, however, no minimum holding is prescribed for a direct investment link. There may also be minimum values for recording direct investment flows, i.e. any transaction below a certain value will be recorded under another heading.

-quoted shares and "free" shares or shares acquired in return for goods or services cannot be recorded under equity holdings. They must therefore be recorded incorrectly as portfolio transactions.

-and then we come to the question of how to define and include indirect links. Treatment of such flows varies considerably from country to country. There are countries which do not look for indirect links at all, others that record them occasionally and others which seek them out systematically.

Among the latter there are many differences in the definition of an indirect link. But the asymmetries resulting from differences of definition are marginal: most direct investment enterprises (80 to 90%) are majority-owned subsidiaries, the differences in definition affecting mainly associated companies. However, the inclusion or otherwise of indirect links has an effect on:

-the treatment of reinvested profits;

-loans between "sibling" companies (companies with the same parent company). A loan from a subsidiary (in country A) to a "sibling" company (in country B) can be attributed to the parent company (in country C, not in line with the OECD definition) or as originating from country A (i

n accordance with the OECD recommendations).

**Differences in the definition of a direct investment flow:**

Depending on the country, the following do or do not form part of the direct investment flows recorded in the Balance of Payments:

a) reinvested profits: the inclusion or exclusion of this type of flow in direct investment is mostly determined by the information collection system. It is clearly probably one of the major causes of asymmetry. The higher and older the direct investment stock, the greater the risk of asymmetry between the statistics of one country which records reinvested profits and those of another which omits them. In other words, one can assume that countries with established direct investment traditions (with enterprises that have been "physically" on the market for a very long time) reinvest because of their capacity to generate their own finance. Only four or five Community countries at present have statistics on reinvested profits. It is for that reason that they are not yet involved in harmonization work, but this problem must be borne in mind, especially when comparing figures published by EUROSTAT with those in other publications.

b) long-term loans: only Denmark and Italy do not include them at all in direct investment. Nonetheless, "long-term" has different meanings in different countries (loans of over one year, loans of over five years, etc.). The purpose of the loan (commercial loan, leasing, etc.) also creates distortions in the way flows are treated: the BLEU, Denmark, Germany, France, Italy and Portugal exclude all commercial loans and financial leasing; Greece excludes commercial loans. Long-term loans to banks are not considered as direct investment by the BLEU, Germany, France and the United Kingdom.

c) short-term loans and inter-company account balances are not uniformly recorded as direct investment within the European Community. Certain Member States consider this to be a major cause of asymmetry. Only the BLEU, the Netherlands and the United Kingdom record them as direct investment. The same comments as for the purpose of long-term loans apply.

d) when a direct investor decides to invest in his subsidiary abroad by borrowing on the subsidiary's local market, the flow does not appear in the Balance of Payments since no border has been "crossed" (as in the case of reinvested profits). But this flow will be visible if the collection system is based in part at least on a survey system.

Again the differences are very much bound up with the data collection system, which may favour analysis by type of transactor or by type of transaction. A further factor responsible is the lack of a tree structure for the classification of capital accounts: for example, is a commercial loan from a company to its foreign subsidiary first a commercial loan or first a loan by a company to its subsidiary?

**Differences in recording the same flow:**

Even if all the points described above are apparently adhered to in the same way by two different economies, it is still not certain whether the same flow will be classified in the same way by each: this is particularly so in the case of "reverse flows" (i.e. capital supplied by a subsidiary to its parent) and "multilateral" flows (between enterprises belonging to the same group):

a) In the case of capital supplied by a foreign subsidiary to its resident parent company, and remembering that we are dealing here with direct investment flows, is the capital a disinvestment by the parent company or an investment by the subsidiary in its parent? This problem is also at the root of numerous instances of asymmetry, since

the volume of direct investment flows between the parent company and the subsidiary is extremely large (often larger than acquisitions or sales of assets abroad).

b) In the case of large multinational groups and holding companies, there is additionally the question of geographical allocation of flows. If enterprise E1 located in country A establishes a subsidiary E3 in country C using funds from another of its subsidiaries E2 located in country B, the following flows will be recorded:

- country A will record nothing at all;
- country B will record a disinvestment from A;
- country C will record an investment from B;

with the result that there will be an asymmetry between A and B and B and C respectively.

**It would appear that this type of asymmetry is the cause of our largest asymmetries:** the amounts of capital moved around by large multinational groups are considerable and are most likely to be incorrectly allocated because of the very complicated structures which link them (a typical case are the asymmetries in the Netherlands, United Kingdom, USA triangle).

#### Sundry asymmetries:

We would also like to draw attention to the following problems:

a) "authorized" and "actual" investments: certain countries have only statistics based on the administrative documents that are legally required. Some countries provide more detailed information (geographical structure of flows or breakdown by sectors) only from this source, but also have "direct investment" statistics from the Balance of Payments which are not consistent with the former.

b) exchange rates: certain countries convert the amount of the transaction at the rate applicable on the day of settlement, others at an average monthly rate.

c) date of recording: the same transaction may be recorded on the debit side by one country at a particular date and on the credit side by a partner country at a different settlement date, which can lead to distortions if the dates are around the end of the year.

However, these problems are common to the rest of the Balance of Payments.

## **Part Two: Statistical tables**

### **N.B.**

- Reinvested profits are excluded.
- The data prior to 1990 have not been revised.

Notes: A positive figure indicates a net disinvestment.

A negative figure indicates a net investment.

Excluding reinvested profits.

Investment by subsidiaries in their parent companies are recorded as investment by the subsidiaries and not as disinvestment by the parent companies.  
Since 1987, "not allocated industries" = "Energy" + "Chemical industries".

Source: Bank of Japan data/EUROSTAT estimates (see (\*)(\*\*))

Notes : A positive figure indicates a net disinvestment.

A negative figure indicates a net investment.

Excluding reinvested profits.

(\*) For 1984 and 1985, The Bank of Japan gives only EUR 10 totals.

EUR 12 total has thus been estimated by EUROSTAT for these two years.

(\*\*) Except for USA, all the extra EUR 12 economic zones have been estimated using the national nomenclature of Japan.

Source: Ministry of Finance JAPAN Data  
harmonised by EUROSTAT

*Notes: A positive figure indicates a net investment.*

*A negative figure indicates a net disinvestment.*

*Excluding reinvested profits.*

*Remark: Figures reported here are investments "notified" to Ministry of Finance during the Japanese fiscal Year (April 1 to March 31) and not investments recorded in the Balance of Payments.*

## **DEFINITION OF ECONOMIC ZONES**

### **EC (European Community)**

**12 countries**

Germany	Ireland
France	Denmark
Italy	Greece
Netherlands	Spain
Belgo-Luxembourg Economic Union	Portugal
United Kingdom	

### **EFTA (European Free Trade Association)**

**6 countries**

Austria	Norway
Switzerland	Sweden
Iceland	Finland

### **OECD (Organization for Economic Cooperation & Development)**

**24 countries**

EC	Canada
EFTA	Japan
Turkey	Australia
United States of America	New Zealand

### **Countries from Central and Eastern Europe and Baltic countries**

**15 countries**

Estonia	Bulgaria
Lithuania	Albania
Latvia	Croatia
Poland	Slovenia
Czech Rep.	Bosnia-Herzegovina
Slovakia	Serbia and Montenegro
Hungary	former Yugoslav Rep. of Macedonia
Romania	

### **NAFTA (North American Free Trade Association)**

**3 countries**

United States of America	Mexico
Canada	

### **Latin America**

**20 countries**

Mexico	Colombia
Guatemala	Venezuela
Honduras	Ecuador
El Salvador	Peru
Nicaragua	Brazil
Costa Rica	Chile
Panama	Bolivia
Haiti	Paraguay
Dominican Republic	Uruguay
Cuba	Argentina

### **ASEAN (Countries for the Association of South-East Asian Nations)**

**6 countries**

Indonesia	Brunei
Thailand	Singapore
Malaysia	Philippines

**OPEC (Organization of Petroleum Exporting Countries)**

<b>13 countries</b>	Algeria	Iraq
	Libya	Iran
	Nigeria	Saudi Arabia
	Gabon	Kuwait
	Venezuela	Qatar
	Ecuador	United Arab Emirates
		Indonesia

**ACP (African, Caribbean and Pacific countries signatories of the Lomé convention)**

**69 countries (46 African 15 Caribbean 8 Pacific countries)**

**African ACP countries**

Sudan	Mozambique
Mauritania	Madagascar
Mali	Mauritius
Burkina Faso	Comoros
Niger	Zambia
Chad	Zimbabwe
Cape Verde	Malawi
Senegal	Namibia
Gambia	Botswana
Guinea Bissau	Swaziland
Guinea	Lesotho
Sierra Leone	<b>Caribbean ACP countries</b>
Liberia	Belize
Ivory Coast	St Christopher & Nevis
Ghana	Haiti
Togo	Bahamas
Benin	Dominican Republic
Nigeria	Antigua and Barbuda
Cameroon	Dominica
Central Africain Rep.	Jamaica
Equatorial Guinea	St Lucia
São Tome & Principe	St Vincent
Gabon	Barbados
Congo	Trinidad & Tobago
Zaire	Grenada
Rwanda	Guyana
Burundi	Surinam
Angola	<b>Pacific ACP countries</b>
Ethiopia	Papua New Guinea
Djibouti	Solomon Islands
Somalia	Tuvalu
Kenya	Kiribati
Uganda	Fiji
Tanzania	Vanuatu
Seychelles & dep.	Tonga
	Western Samoa

**NICs1 (the core Newly Industrializing Countries)**

<b>4 countries</b>	Singapore	Taiwan
	South Korea	Hong Kong

**NICs2A (Asian NICs of the second wave of industrialization)**

<b>3 countries</b>	Malaysia	Thailand
	Philippines	

**NICs2LA (Latin American NICs of the second wave of industrialization)**

<b>4 countries</b>	Mexico	Argentina
	Brazil	Chile

**Mediterranean Basin**

<b>19 countries</b>	Gibraltar
Algeria	Malta
Libya	Croatia
Morocco	Slovenia
Tunisia	Albania
Egypt	Cyprus
Lebanon	Israel
Syria	Bosnia-Hercegovina
Jordan	Serbia and Montenegro
Turkey	Form. Yug. Rep. Macedonia

**Offshore financial centers**

<b>16 countries</b>	Bermuda
Bahamas	British Virgin Island & Montserrat
Bahrain	Jamaica
Cayman Islands	Lebanon
Hong Kong	Liberia
Netherlands Antilles	Philippines
Panama	St Christopher & Nevis
Singapore	Vanuatu
Barbados	

**French Franc zone**

<b>14 countries</b>	Equatorial Guinea
Benin	Mali
Burkina Faso	Niger
Cameroon	Central African Republic
Comoros	Senegal
Congo	Chad
Ivory Coast	Togo
Gabon	

**Community of Independent States (CIS)**

**11 countries**

Russia  
Belarus  
Ukraine  
Moldova  
Armenia

Azerbaijan  
Tadzhikistan  
Uzbekistan  
Turkmenistan  
Kazakhstan  
Kyrgyzstan

**Maghrebian Countries**

**3 countries**

Algeria  
Morocco

Tunisia

**Countries from Machrek**

**4 countries**

Egypt  
Jordan

Lebanon  
Syria

## **GEONOMENCLATURE**

### **EUROPE**

**EC countries (see economic zones)**

**EFTA countries (see economic zones)**

#### **Other European Countries**

Turkey, Andorra, Gibraltar, Vatican City State, Malta, Cyprus, Baltic Countries,  
Poland, Czech Rep., Slovakia, Hungary, Romania, Bulgaria, Albania, Croatia, Slovenia  
Bosnia-Hercegovina, Serbia and Montenegro, Territory of the former Yugoslav  
Rep of Macedonia, Russia, Belarus, Ukraine and Moldova.

#### **Baltic Countries**

Estonia	Lithuania
Latvia	

### **AFRICA**

#### **North Africa**

Morocco	Libya
Algeria	Egypt
Tunisia	Sudan

#### **Other African countries**

Mauritania	Rwanda
Mali	Burundi
Burkina Faso	St Helena & dep.
Niger	Angola
Chad	Ethiopia
Cape Verde	Djibouti
Senegal	Somalia
Gambia	Kenya
Guinea Bissau	Uganda
Guinea	Tanzania
Sierra Leone	Seychelles & dep.
Liberia	Brit. Indian Ocean territ.
Ivory Coast	Mozambique
Ghana	Madagascar
Togo	Mauritius
Benin	Comoros
Nigeria	Zambia
Cameroon	Zimbabwe
Central Africain Rep.	Malawi
Equatorial Guinea	Rep. of South Africa
São Tome & Principe	Namibia
Gabon	Botswana
Congo	Swaziland
Zaire	Lesotho

## **AMERICA**

### **North American countries**

**USA**

**Canada**

### **Central American countries**

Mexico  
Bermuda  
Guatemala  
Belize  
Honduras

European Commission

**Direct investment in the European Community — 1984-91**

Luxembourg: Office for Official Publications of the European Communities

1994 — 144 pp. — 21.0 x 29.7 cm

Theme 6: External trade and balance of payments (red)

Series D: Studies and analyses

ISBN 92-826-6471-6

Price (excluding VAT) in Luxembourg: ECU 10.50

Eurostat publishes detailed statistical tables of the European Community's direct investment flows as recorded in the Balance of Payments.

The results, obtained after harmonization and aggregation of Member States' balance of payments data, can be used to compare these investments more easily with those of the United States and Japan.

Tables present a geographical and sectorial analysis of this type of capital.
