<b>Press releases:</b> Eurostat publishes around 100 press releases every year in connection with the release of new data. The press releases include the key figures on the EU, the Member States and their partners. They are provided free of charge. They are also available on the Internet as soon as they are published: <a href="http://www.europa.eu.int/comm/eurostat/">www.europa.eu.int/comm/eurostat/</a>	 	Paper HTML PDF
<b>Statistics in focus:</b> This collection is published regularly by Eurostat and provides up-to-date summaries of the main results of statistical surveys, studies and analyses. It covers all themes and consists of about four to eight pages per issue. Eurostat issues around 150 <i>Statistics in focus</i> per year. Available as single copies or on subscription.	  	Paper PDF
<b>Pocketbooks:</b> This collection provides the main indicators on a theme or sub-theme in an easy-to-carry booklet of up to 100 pages. Available as single copies or on subscription.	 	Paper HTML
<b>Panorama of the European Union:</b> This collection highlights the features and trends of a multi-sectoral theme or a sectoral sub-theme. The publications consist of around 200 pages and include analyses as well as tables and graphs. Available as single copies or on subscription.	  	Paper CD-ROM
<b>Methods and nomenclatures:</b> intended for specialists who want to consult the methodologies and nomenclatures used for a theme, a sub-theme or a sector. Available as single copies.		Paper CD-ROM
<b>Detailed tables</b> are intended for specialists. They present part, or all, of the statistical data compiled on a theme, sub-theme or sector. Available as single copies or on subscription.	 	Paper CD-ROM
<b>Catalogues</b> provide rapid access to concise information on Eurostat's products and services. They are free of charge and include the <i>mini-guide</i> , a selection of Eurostat products and services, and <i>Statistical references</i> , the quarterly newsletter on Eurostat's latest products and services. ## Eurostat Data Shops

### A personalised data retrieval service

In order to provide the greatest possible number of people with access to high-quality statistical information, Eurostat has developed an extensive network of Data Shops (¹).

Data Shops provide a wide range of **tailor-made services**:

- ★ immediate information searches undertaken by a team of experts in European statistics;
- ★ rapid and personalised response that takes account of the specified search requirements and intended use;
- ★ a choice of data carrier depending on the type of information required.

Information can be requested by phone, mail, fax or e-mail.

(¹) See the list of Eurostat Data Shops at the end of this publication.

## Internet

### Essentials on Community statistical news

- ★ Euro indicators: more than 100 indicators on the euro zone; harmonised, comparable, and free of charge.
- ★ About Eurostat: what it does and how it works.
- ★ Products and databases: a detailed description of what Eurostat has to offer.
- ★ Indicators on the European Union: convergence criteria; euro yield curve and further main indicators on the European Union at your disposal.
- ★ Press releases: direct access to all Eurostat press releases.

For further information, visit us on the Internet: [WWW.europa.eu.int/comm/eurostat/](http://WWW.europa.eu.int/comm/eurostat/)

*Europe Direct is a service to help you find answers to your questions about the European Union*

New freephone number:

**00 800 6 7 8 9 10 11**

A great deal of additional information on the European Union is available on the Internet.  
It can be accessed through the Europa server (<http://europa.eu.int>).

Cataloguing data can be found at the end of this publication.

---

Eurostat is the Statistical Office of the European Communities. Its task is to provide the European Union with statistics, at a European level, that allow comparisons to be made between countries and regions. Eurostat consolidates and harmonises the data collected by the Member States.

To ensure that the vast quantity of accessible data is made widely available and to help each user make proper use of the information, Eurostat has set up a publications and services programme.

This programme makes a clear distinction between general and specialist users and particular collections have been developed for these different groups. The collections *Press releases*, *Statistics in focus*, *Panorama of the European Union*, *Pocketbooks* and *Catalogues* are aimed at general users. They give immediate key information through analyses, tables, graphs and maps.

The collections *Methods and nomenclatures* and *Detailed tables* suit the needs of the specialist who is prepared to spend more time analysing and using very detailed information and tables.

All Eurostat products are disseminated through the Data Shop network or the sales agents of the Office for Official Publications of the European Communities. Data Shops are available in 13 of the 15 Member States as well as in Switzerland, Norway and the United States. They provide a wide range of services from simple database extracts to tailor-made investigations. The information is provided on paper and/or in electronic form via e-mail, on diskette or on CD-ROM.

As part of the new programme, Eurostat has developed its web site. It includes a broad range of online information on Eurostat products and services, newsletters, catalogues, online publications and indicators on the euro zone.

## SYMBOLS AND ABBREVIATIONS USED

Mio	Million

## FOREWORD

Did you know that in 2001, the European Union's external current deficit shrank remarkably in comparison to the previous year?

Did you know that Japan has a steady external current surplus while the USA has a persistent deficit?

Did you know that the USA is the main EU trade partner?

Did you know that the EU is a net exporter of services to Japan?

Did you know that the EU is a net importer of Royalties and license fees and Audiovisual services from the USA?

This publication provides you with the most recent and comparable statistics of the EU, the euro-zone, Norway, the USA and Japan on:

- ⌚ Annual
- ⌚ International
- ⌚ Current transactions

Particular emphasis is put on Trade in Services and on the diversity of trading partners. Therefore, these statistics can be used to monitor the external commercial performance of different economies and thus assist trade negotiations in the context of the General Agreement on Trade in Services (GATS).

In the first part of this publication you can find an analysis of 2001 main features through comments, graphs and tables. The second and third parts provide a detailed review of 2001, displaying a complete set of tables for the EU, euro-zone, Norway, the USA and Japan. Finally, the fourth part gives a short description of the methodological framework.

Your needs as a user are our main concern. We can only improve with your help, so please make your comments and suggestions. Contact:

N.B.: The CD-Rom "International trade in services, Geographical breakdown of the current account - EU (2003 edition)", provided in annex to this publication, gives for the European Union (EU), the euro-zone (euro 12), each of the EU Member States, Norway, the USA and Japan a detailed breakdown of trade in services as well as a geographical breakdown of international transactions.

## Important information

In line with the agreed allocation of responsibility, the European Central Bank is in charge of compiling and disseminating the euro-zone monthly and quarterly balance of payments statistics, whereas the European Commission (Eurostat) focuses on quarterly and annual aggregates of the EU-15.

The data comply with international standards, in particular those set out in the IMF Manual on Balance of Payments Statistics (5th edition).

The EU balance of payments is compiled by Eurostat in accordance with a methodology agreed with the ECB based on extra-EU transactions, i.e. by aggregating cross border transactions of EU residents vis-à-vis non-EU residents as reported by the 15 participating Member States. The balance of payments of the EU institutions is added to the EU aggregate. The ECB compiles the euro-zone aggregate following the same agreed methodology excluding cross-border transactions within the euro-zone. The EU institutions are treated as non-resident of the euro-zone.

Published data for the euro-zone, which include detail on services only, have been validated by the ECB. In fact, annual detailed breakdowns of the item services for the euro-zone transactions are made available by the Member States only to Eurostat. They do not match up exactly with those released by the ECB because:

- Eurostat and the ECB have different "cut-off" dates for receiving Member States' data for processing.  
Revisions could take place between these "cut-off" dates;
- some minor methodological differences remain between the data transmitted to Eurostat and the ECB by some Member States.

Eurostat's data for the euro-zone should therefore be regarded as memorandum items, the official data being published by the ECB.

### **Geographical breakdown of goods imports**

This year, most EU Member States supplied imports of goods data allocated geographically according to the "principle of consignment", thus conforming to international standards. This methodology consists of reporting intra-EU imports of goods according to country of consignment (community concept) rather than origin (national concept).

However, all Member States have not implemented this methodological change at the same point in their time series. By way of consequence, a work has been developed by Eurostat in co-operation with the Member States for the calculation of the EU aggregate in order to create one single methodological break in the time series, in 1997.

### **EU aggregate: implementation of the "consignment principle" in the allocation of intra-EU imports of goods**

<b>Methodology</b>	<b>up to 1996</b>	<b>from 1997 onwards</b>
Principle of consignment	Germany, Italy, the Netherlands, Austria, Portugal, Sweden, the United Kingdom	BLEU (from 1998 onwards), Denmark, Germany, Spain (from 1998 onwards), France, Italy, the Netherlands, Austria, Portugal, Finland, Sweden, the United Kingdom
Principle of origin	Spain, France, Finland, Ireland	Ireland, Greece (from 2001)
Other or uncertain	BLEU, Denmark, Greece	

Thus, goods data for the EU aggregate from 1997 onwards are comparable with those released for the euro-zone by the ECB.

### **Methodological difference between Eurostat and the ECB for the compilation of investment income flows**

Even though Eurostat and the ECB have now implemented the same methodology for the recording of the "goods" item, the concepts underlying the Eurostat's EU-15 data are still not fully comparable to those underlying the euro-zone figures released by the ECB. For example, a difference in concepts currently exists in the area of portfolio investment income. Indeed, a new methodology has been implemented by the ECB for the geographical allocation of this sub-item income, which also has consequences on the overall income account and the current account. In fact, it has been decided that receipts on portfolio investment income would be allocated geographically according to the residency of the security issuer rather than that of the immediate counterpart. On the basis of intra-euro area receipts, which are deducted from the amount of total payments on portfolio investment income (i.e. including intra- and extra- euro area), the part relating to extra payments only can be identified according to the residency of the end-investor. Due to a shortage of data, this methodological change could not be implemented for the compilation of the EU-15 aggregate.

Both institutions and the European Union Member States are currently working in order to minimise these discrepancies in the future.

## ANALYTICAL ASPECTS

## International Trade in Services data: a decision-making tool for a strategic field

Services encompass a vast and disparate range of economic activities. The services sector contributes more to economic growth and job creation worldwide than any other sector. No country can prosper today without an efficient service infrastructure. It is a prerequisite for economic performance and development. Access to high quality services, in particular infrastructure-related services such as telecommunications, transport, and financial services, benefit the whole economy by increasing productivity across sectors and are crucial for economic development<sup>1</sup>.

Despite remaining trade barriers, the international trade in services has been growing at the same rate on average as international trade in goods in recent years, representing 20% of total trade.

**Comparison of total world\* flows (exports+imports) of goods and services

\* World excluding intra-EU trade

The share of services value added in GDP is a good indicator of the importance of services. For example, services activities in the EU represented 65% of total EU GDP in 2001 (67% in the USA).

**Gross value added (at basic prices) of total Services as a percentage of GDP**

	1997	1998	1999	2000	2001

\* at current prices

Another indicator of the economic contribution of services to the EU economy is the share of services activities in total employment that reached 69% in 2001. Furthermore, this share shows an upward trend, meaning that its importance has been increasing during the last few years (in 1997 the share was 67%), and it is likely that this will continue.

## EU trade policy in services

The EU has been the world leader of the drive to liberalise trade in services, largely due to its openness to competition.

Since January 1995, world trade in services has come under a basic framework of rules, the General Agreement on Trade in Services (GATS), one of the results of the Uruguay Round. GATS commits members of governments to undertake negotiations on specific issues in order to progressively liberalise trade in services.

The services negotiations started officially in early 2000 under the Council for Trade in Services. In March 2001, the Services Council fulfilled a key element in the negotiating mandate by establishing the negotiating guidelines and procedures.

The fourth ministerial conference in Doha (Qatar) in November 2001 launched a new round of WTO trade negotiations. The Doha Declaration endorses the work already done, reaffirms the negotiating guidelines and procedures, and establishes some key elements of the timetable including, most importantly, the deadline for the conclusion of the negotiations as part of a single undertaking.

Together with agriculture policy, the Union's commercial policy is the most integrated policy, in the sense that the European Commission (EC) is fully in charge of the initiation, negotiation and implementation of this policy. In this context, as services have become of crucial importance following the worldwide expansion of the services sector, the EC's Directorate General and Services for Trade is the main user of ITS data, followed by other Directorates-General and Services (External Relations, Economic and Financial Affairs...)

Aware of the interest in a sector that concerns in many ways their daily life and of the sensitivity of issues like the opening up of public services to competition, the EC has led the new round of trade negotiations on a mandate given by the Council and the European Parliament. The EU agenda is to seek better access for European services exporters in foreign markets and to secure a more transparent and predictable regulatory environment for services. Thus, the EC submitted in July 2002 its requests for improved market access of 11 services sectors (professional services, other business services, telecom, postal services, distribution, construction and related engineering services, environmental services, tourism, news agencies services and energy services) to 109 World Trade Organisation (WTO) members. In parallel, the EC received third countries' requests seeking for further access to the EU's services market for their services providers. The focus of work has now shifted from the multinational arena to bilateral negotiations between trading partners. Trade in services data are consequently a very important tool for steering the negotiations.

## Quantitative importance of the EU

The European Commission has important stakes in the current negotiations on services. Services constitute the single most dynamic economic activity in the EU. The EU is at the same time the biggest world exporter and importer of services, with 24% of world total trade in services in 2001 (while it covers 19% of world total trade in goods).

**Total services transactions (credit+debit): Share of selected reporters in the world total in 2001**

Many public services are not subject to the GATS negotiations: services not provided on a commercial basis or in competition with one or more services suppliers. The commercial services are thus obtained by subtracting government services from the total of services.

The table below shows the level of transactions in commercial services. The EU is the main importer and exporter for these services, its share amounting to 25% of exports and 24% of imports.

**World exports and imports of commercial services (1997-2001)**

\* IMF data

## 2001 main features

In 2001, the EU external current account balance experienced a marked recovery reaching EUR -20.5 bn, after falling to a record low of EUR -66.5 bn in 2000.

This recovery was largely due to the strong decrease in the balance of goods deficit, from EUR 60.0 bn in 2000 to EUR 0.5 bn in 2001.

The EU surplus in services grew slightly to EUR 9.0 bn in 2001 from EUR 6.6 bn in 2000.

The EU current account surplus with the USA peaked at EUR 56.7 bn in 2001, EUR 6.6 bn higher compared to 2000. Total EU transactions with the USA accounted for 29% of EU external trade.

The EU structural deficit current account with Japan decreased to EUR 30.8 bn. Total EU current transactions with Japan levelled at 6% of EU external trade.

The EU remains more open to international trade than its main partners, attaining an ever-growing degree of openness of 29% in 2001, compared to 23% for the USA and 21% for Japan.

The trade balance in Goods, according to the Balance of payments concept includes all movable property whose **ownership** is transferred from a resident to a non-resident or vice versa. Both, exports and imports are valued free on board (**f.o.b.**). These figures should be based on customs data, which are imports at **c.i.f.** values (including costs relating to transport and insurance) and exports at **f.o.b.** values (excluding transport costs). Imports at **c.i.f.** values are corrected to imports at **f.o.b.** values in order to classify costs relating to transport and insurance as transport services and insurance services. Transactions on goods crossing a border without change of ownership are not regarded as exports, but transactions on goods between residents and non-residents are regarded as exports, even if the goods do not cross a border. This explains why external trade statistics and balance of payments figures for goods are not the same.

NB: Concerning the geographical breakdown of goods' imports, a new methodology has been implemented from 1997 onwards. Please refer to the note page 7.

## EU current account recovers at EUR -20.5 bn in 2001 after a record low in 2000

In 2001, the EU current account balance with the rest of the world registered a deficit of EUR 20.5<sup>2</sup> bn (-0.2% of EU GDP) compared to a deficit of EUR 66.5 bn recorded in 2000 (-0.8% of EU GDP). This strong reduction was primarily due to a sizeable decrease in the goods<sup>1</sup> deficit, from EUR 60.0 bn in 2000 to EUR 0.5 bn, combined with a small rise in services surplus, from EUR 6.6 bn to EUR 9.0 bn in 2001. This improvement in the goods and services balance was partially offset by a reduction in the income surplus, from EUR 13.7 bn to EUR 3.8 bn and the rise in the current transfers deficit, from EUR 26.9 bn to EUR 32.9 bn.

<sup>1</sup> According to the Balance of Payments concept: (exports FOB - imports FOB).

<sup>2</sup> For figures: differences may occur between the figures in the text and the sum of their components (in the tables) due to rounding.

Total extra-EU current transactions were 3% higher in 2001 than in 2000. Credits increased to EUR 1614.8 bn (+5% compared to 2000) while debits grew more sluggishly (+2%) to reach EUR 1635.2 bn. Total transactions in goods amounted to EUR 1920.0 bn, 2% higher than the previous year. Exports of goods rose by 6%, to EUR 959.8 bn while imports in goods declined by 1% to EUR 960.3 bn. EU exports and imports in services increased by 5% and 4%, respectively, making total transactions in services grow by 5% in 2001 to EUR 618.6 bn. Income credits rose by 0.5% while income debits showed an increase of 4%. Total income transactions amounted to EUR 605.1 bn. Finally, current transfers credits and debits grew by 11% and 17%, respectively, in 2001. Total current transfers transactions increased to EUR 106.3 bn in 2001.

Over the 1992-2001 period, EU total current transactions with the rest of the world expanded significantly. Both EU credit and debit transactions more than doubled during this decade. EU credits grew slightly more than EU debits, respectively 2.2 fold and 2.1 fold. The EU current account shifted into a deficit in 1999 after continuously rising to peak in 1997 at EUR 72.2 bn. The EU current balance deteriorated from 1998 to 2000. In 2001, the current account deficit decreased by EUR 46.0 bn to EUR 20.5 bn.

## Composition of the current account

The structure of total current account transactions (debits + credits) remained almost unchanged from 1992. More particularly, trade in goods continued to account for the largest share, 59% of the total (compared to 57% in 1992). Next, came services and income, both 19% in 2001 (compared to 17% and 19% in 1992) and lastly current transfers (3% in 2001 and 7% in 1992).

Therefore, strong variations in trade in goods largely explained variations in the EU current account over the 1992-2001 period. Other distinctive features of the EU current account are the continuous surplus recorded in services and income, as well as the structural deficit in current transfers.

**Evolution of the extra-EU current account and main its items' balances  
bn EUR (ECU up to end 1998)**

	1992	1993	1994	1995	1996	1997	1998	1999	2000	2001
<b>Current account</b>	<b>-42.5</b>	<b>9.6</b>	<b>13.2</b>	<b>35.3</b>	<b>44.2</b>	<b>72.2</b>	<b>33.0</b>	<b>-3.7</b>	<b>-66.5</b>	<b>-20.5</b>
Goods	-34.7	11.9	21.3	28.2	43.0	70.1	45.0	12.1	-60.0	-0.5
Services	13.8	12.9	11.9	12.0	12.8	16.2	10.4	8.0	6.6	9.0

Current transfers	-25.6	-25.5	-26.4	-23.6	-17.8	-20.8	-19.3	-25.0	-26.9	-32.9

**EU current account surplus with the USA peaked at EUR 56.7 bn in 2001**

The EU current account with the USA registered a surplus of EUR 56.7 bn in 2001, EUR 6.6 bn higher compared to the surplus obtained in 2000. EU credit current transactions increased to EUR 492.6 bn (+2% compared to 2000) while EU debits grew moderately to EUR 435.9 bn (+1%).

The higher EU surplus with the USA was mainly caused by the substantial rise in the EU surplus in goods to EUR 51.1 bn, EUR 15.5 bn higher than in 2000. The rise in the goods balance more than offset the negative results obtained in the other balances. In services, the balance turned into a deficit of EUR 1.9 bn from a surplus of EUR 2.1 bn. This deterioration was observed across all the main services components (*transportation, travel and other services*<sup>2</sup>). The EU surpluses with the USA in income and current transfers shrank by EUR 7 bn and EUR 0.4 bn, respectively.

**EU current account with the USA (bn EUR)**

	Credit flows			Debit flows			Net flows		
	2000	2001	Var (%)	2000	2001	Var (%)	2000	2001	Var(abs)

It includes communications services, construction services, insurance services, financial services, computer & information services, royalties and licence fees, other business services, personal, cultural & recreational services and government services n.i.e.

## EU current deficit with Japan decreased to EUR 30.8 bn in 2001

In 2001, the structural deficit of the EU current account with Japan narrowed by EUR 12.3 bn and amounted to EUR 30.8 bn.

The deficit in the balance of goods recorded a remarkable fall in 2001 to EUR 28.3 bn, EUR 11.7 bn smaller than in 2000. The EU surplus in services fell to EUR 6.5 bn in 2001 from EUR 7.6 bn in 2000, due to the combined effect of significantly higher imports from Japan (+7%) and a reduction in EU exports (-2%). Within services, the surplus in transportation increased while the surpluses in travel and other services were lower than in 2000. Regarding income, the EU balance with Japan settled with a EUR 8.9 bn deficit, EUR 1.8 bn lower than in 2000. The current transfers deficit marginally increased to EUR 82.7 Mio.

## EU current account: geographical breakdown over the 1992-2001 period

The reduction in the EU 2001 current account deficit was broadly the result of two different sources. Firstly, bilateral deficits with partners, for which higher deficits were recorded in 2000, diminished in 2001. And secondly, the largest EU bilateral surpluses obtained in 2000 widened in 2001. Over the 1992-2001 period, the EU recorded a structural deficit with China and Japan as well as with countries that are net exporters of natural resources (especially oil), such as North African countries and Russia. On the other hand, the EU current deficit with Asia (excluding Japan and China) only started in 1997 with the Asian financial crisis, and improved markedly in 2001.

The largest EU surplus in the current account was achieved with the USA. In spite of slower economic growth in 2001 than in previous years, and the possible negative trade effects associated with the terrorism attacks of September 11, the USA's demand for European goods continued to be robust. On the other hand, the EU surplus with Near and Middle East countries (including Israel, Iran, Gulf Arabian Countries) more than doubled compared to 2000, reaching EUR 24.7 bn in 2001.

<sup>(1)</sup> European countries other than EU and EFTA countries

### Key indicators: Why did the current account deficit diminish?

Looking at the main factors which could have decreased the current account deficit in 2001, the weakness of the European domestic demand is significant. The growth rate of GDP<sup>3</sup> diminished to 1.5% in 2001 from 3.5% in 2000. The result was that EU imports from the rest of the world grew weakly (+0.4% in 2001) while EU exports increased by 5.5%.

The real effective exchange<sup>4</sup> rate played also a favourable role in the EU current account balance: lower price and cost inflation in the EU compared to its trading partners resulted in a bigger improvement in real terms. Although the appreciation of the EU real exchange rate has led to a 2% deterioration of the cost competitiveness in 2001 compared to 2000, the EU still displayed a gain of 16% compared to the 1995 average: in 2001, the EU real effective exchange rate was 9% below its 1995-2002 average.

The 3.1% EU depreciation against the US dollar had also a major effect to the current account surplus registered by the EU with the USA: EU exports to the USA increased by 2.5% in 2001 while EU imports decreased by 0.8%.

### EU more open than USA and Japan since 1997

The EU has recorded a higher degree of openness than the USA and Japan since 1997. The share of EU imports and exports of goods and services in the GDP rose to 29% in 2001, compared to 23% for the USA and 21% for Japan. Over the 1992-2001 period, both the share of EU imports and exports in the GDP increased more rapidly in the EU than in its two main partners.

<sup>3</sup> The growth rate of GDP is calculated at constant prices (1995=100).

<sup>4</sup> The real effective exchange rate measures the change in competitiveness of a country, by taking into account the change in costs or prices relative to other countries. A rise in the index means a loss of competitiveness. The trade-weighted basket contains 24 industrial countries, using double export weights. Here, the real effective rate is calculated by deflating the nominal series by unit labour costs.

## Current account indicators for EU, the USA and Japan over the 1992-2001 period

The EU current account recorded an increasing surplus over the 1993-1997 period, from EUR 9.6 bn (+0.2% of EU GDP) to EUR 72.2 bn (+1.0% of EU GDP). From 1998, the EU balance deteriorated from EUR 33 bn in 1998 (+0.6% of EU GDP) to EUR -66.5 bn in 2000 (-0.8% of EU GDP). In 2001, the EU current account improved to EUR -20.5 bn (-0.2% of EU GDP). The USA recorded a continuous decline of its current balance over the 1992-2001, accordingly its deficit as a share of the GDP increased from 1.0% to 3.9% in 2001.

Japan current account experienced an increasing surplus over the 1995-2000 period, with a high at EUR 126.4 bn in 2000. In 2001, Japan surplus reduced to EUR 98 bn (+2.1% of Japan GDP).

(2) The cover ratio is the result of exports divided by imports. It is expressed in percentage terms.

## EU trade in services: slower growth in 2001

After a remarkable growth of 18% in 2000, trade in services grew by 5% in 2001, recording a value of EUR 618.6 bn. In 1992, extra-EU exchanges of services amounted to EUR 304.5 bn, approximately half the 2001 value. Exports increased more than imports in 2001, for the first time in four years, leading to a higher surplus. Thus, exports of services grew by 5% whereas imports rose by 4% amounting to EUR 313.8 bn and EUR 304.8 bn, respectively.

The EU surplus in trade in services reached EUR 9.0 bn in 2001, exceeding that registered in 2000 by EUR 2.4 bn. The growth of the services' surplus broke the trend begun in 1998, when the surplus started to shrink continuously, after reaching a record surplus of EUR 16.2 bn in 1997.

## Composition of trade in services remained unchanged in 2001

No major changes were to be reported in the respective shares of the main categories of services in relation to the total. The leading subcomponents persisted: *other business services*, *transportation* and *travel* accounted for three quarters of EU total external transactions in services. Far behind came *royalties & licence fees* (6%), *financial services* (5%), *computer and information services* and *construction services* (each 3%). Finally, *services in insurance, communication, government, and personal, cultural and recreational* stood steady at 2%.

## EU services in 2001: transactions in computer and information services grew by 18%

Despite the slower growth in trade in services, transactions in *computer and information services* grew strongly by 18% in 2001, nearly at the same pace as in 2000, when they expanded by 19%. In contrast, exchanges of *financial services* contracted by 2% in 2001, after increasing by 37% and 31% in 2000 and 1999, respectively. Imports and exports of *air transport* decreased by 1% and 4%, respectively.

As in 2000, the main contribution to the EU surplus in the balance of services came from *financial services* with EUR 9.7 bn. This surplus was, however, EUR 1.6 bn lower than in 2000. *Air transport* also contributed significantly to the overall surplus in services with EUR 6.0 bn. Surpluses were also obtained in *construction* (EUR 3.6 bn), *insurance* (EUR 4.6 bn) and *computer and information services* (EUR 4.4 bn).

The EU deficit in *travel* increased to EUR 5.6 bn in 2001 from EUR 2.3 bn in 2000. The deficit in *royalties and licence fees* increased to EUR 8.7 bn in 2001 (EUR 1.1 bn more than in 2000) and has become a structural phenomenon in the EU, predominantly due to the amount of the deficit incurred with the USA, i.e. EUR 10.2 bn in 2001. Finally, the deficit recorded in *other business services* in 2000 (EUR -4.9 bn) practically disappeared in 2001 (EUR -0.2 bn).

## Euro-zone's balance of services in surplus in 2001

The euro-zone<sup>5</sup> exports and imports of services in 2001 were 10% higher than in 2000, reaching EUR 316.2 bn and EUR 313.8 bn, respectively. In 2001, the euro-zone balance of services shifted from a deficit of EUR 10 bn to a surplus of EUR 2.4 bn. The improvement in the balance of services for the euro-zone was higher (EUR +12.4 bn) than the one achieved by the EU (EUR +2.4 bn).

<sup>5</sup> Greece joined the euro-zone in 2001. Hence, the number of Member States in the euro-zone went from 11 in 2000 to 12 in 2001. Greece traditionally presents a surplus in the balance of services, both with partners EU and extra-EU, which has contributed to the improvement in the balance of services of the euro-zone.

### Comparison between extra-EU and extra-euro-zone trade in services in 2001 (bn EUR)

	Exports		Imports		Net	
	EU	EUR-12	EU	EUR-12	EU	EUR-12
<b>Services</b>	<b>313.8</b>	<b>316.2</b>	<b>304.8</b>	<b>313.8</b>	<b>9.0</b>	<b>2.4</b>
Transportation	78.1	76.2	74.1	70.5	4.0	5.8
Sea transport	36.0	32.5	36.6	34.4	-0.6	-1.9
Air transport	32.6	31.7	26.5	22.4	6.0	9.3
Other transportation	9.5	12.0	10.9	13.7	-1.4	-1.6
Travel	71.9	88.5	77.4	66.1	-5.6	22.3
Other services	163.9	151.5	153.3	177.2	10.6	-25.7
Communications services	6.2	7.5	6.9	8.5	-0.7	-1.0
Construction services	10.0	11.1	6.4	7.4	3.7	3.7
Insurance services	7.9	5.0	3.3	4.5	4.6	0.6
Financial services	21.2	16.1	11.5	13.7	9.7	2.4
Computer and information serv.	11.9	12.6	7.5	9.7	4.4	2.9
Royalties and licence fees	13.7	8.0	22.4	21.1	-8.7	-13.1
Other business services	82.5	79.2	82.7	98.4	-0.2	-19.2
Pers., cult. and recreational serv.	3.3	3.1	6.6	8.0	-3.4	-4.9
Government services, n.i.e	7.1	8.8	6.0	5.8	1.1	3.0
Services not allocated	0.0	0.0	0.0	0.0	0.0	0.0

Two main factors explain the improvement in the euro-zone balance of services. First, the *travel* surplus grew by EUR 7.4 bn, from EUR 14.9 bn in 2000 to EUR 22.3 bn in 2001. Second, the deficit in *sea transport* decreased by EUR 5.8 bn, from EUR 7.7 bn in 2000 to EUR 1.9 bn. On the other side, higher deficits were recorded in *royalties and license fees* and *other business services*, which increased by EUR 2.3 bn and EUR 3.4, respectively.

## Euro-zone partners in trade in services

The USA was the largest recipient of euro-zone services outside the group of non-euro-zone countries in 2001. Exports to the USA amounted to EUR 81.6 bn, EUR 9.8 bn more than in 2000. At the same time, the USA was the main provider of services to the euro-zone; imports of services from the USA went up to EUR 90.5 bn in 2001, from EUR 82.5 in 2000. Thus, the deficit with this partner narrowed to EUR 9.0 bn. However, it must be highlighted that there was a gap of EUR 7.1 bn between the euro-zone's balance with the USA and the EU's, since the EU achieved a EUR 1.9 bn deficit with the USA in 2001. This was chiefly due to the considerable bilateral surplus of EUR 8.3 bn attained by the United Kingdom.

**Geographical breakdown of the extra-euro-zone trade in services (bn EUR)**

	Exports			Imports			Net

## II

### DESCRIPTION OF THE TABLES

## Which table contains the information that you want?

### Figures for all the different current international transactions with the main partners

From tables 2.1.1. and 2.1.2., a user can obtain information

- ☛ on **exports, imports** and **net** flows, expressed in million of **EUR**;
- ☛ for the year **2001**;
- ☛ of the **EU-15** (table 2.1.1) and the **Euro-zone** (table 2.1.2);
- ☛ in relation to **World** (including intra zone flows), **rest of the world** (extra-EU-15/extra-EUR-12), **Canada, USA** and **Japan**;
- ☛ for the **main current account items of the Balance of Payments** and **47 items of internationally tradable services**.

For example:

From table 2.1.1., in **2001**, the **EU-15** has **exported EUR 6201 million** towards, and **imported EUR 6934 million** of **communications services** from the **rest of the world** (extra-EU-15).

## A more precise geographical detail of the main current international transactions

Each table of this set refers to one item of the current account.

Tables 2.2.1. to 2.2.23. report information

- ☛ on **exports, imports** and **net** flows, expressed in million of **EUR**;
- ☛ for the year **2001**;
- ☛ of **23 items of the current account** (goods, services, transportation, travel, communications services, income...);
- ☛ of the **EU-15**, the **EUR-12, Norway, USA** and **Japan** (in columns);
- ☛ in relation to **50 partner countries and zones**.

For example:

- From table 2.2.2., in **2001** the **exports of services** towards **Africa** were of **EUR 19464 million** for **EU-15** when they were of **EUR 14156 million** for **EUR-12**, **EUR 1398 million** for **Japan** and **EUR 93 million** for **Norway**.
- From table 2.2.13., in **2001** the **EU-15** imported **computer and information services** from **the USA** for **EUR 4386 million** and from **Asia** for **EUR 1015 million**.

## Historical series since 1991

Each table of this set reports data of the European Union trade with one partner.

From tables 2.3.1. to 2.3.6., a user can find information

- ☛ on **exports, imports** and **net** flows, expressed in million of **EUR** (million of **ECU** to end 1998);
- ☛ of the **EU (EU-12** in 1991; **EU-15** from 1992 onwards);
- ☛ in relation to partners **World, intra-EU, extra-EU, Canada, USA** and **Japan**;
- ☛ for the years **1991 to 2001**;
- ☛ for the **main current account items of the Balance of Payments** and **47 items of internationally tradable services**.

For example:

- From table 2.3.3., in **construction services** the **EU** has been in surplus with the **rest of the world** from **1991 (ECU 3188 million)** to **2001 (EUR 3656 million)**.
- We can also see from table 2.3.6. that **services** exports from the **EU** to **Japan** doubled between **1991 (ECU 8593 million)** and **2001 (EUR 17613 million)**.

III

# **IV**

## **METHODOLOGICAL FRAMEWORK**

## For the attention of the reader

The idea of this chapter is to provide a simplified explanation that helps the reader to understand the practical meaning of current international transactions. It does not pretend to give an exhaustive description of such transactions. For a more detailed information, the reader should refer to the fifth edition of the IMF Balance of Payments Manual.

## What are current international transactions?

From a country's point of view, a **current international transaction**, designated an export, takes place when a resident sells a real resource (goods, services and income) beyond the border and receives foreign currency as a counterpart. The opposite situation - an import - in which an input of real resource and an output of national currency occur in the country, reflects a current international transaction too.

Actually, current international transactions cover different kinds of economic flows. They comprise **international exchanges** and **current transfers**:

- **International exchanges** are the international economic flows implying a financial counterpart. All exports and imports of goods (involving changes in ownership), and of services, are international exchanges. Moreover, these also consist of international provision of labour, as it is the case of seasonal or other short-term workers (less than one year) and border workers who have centres of economic interest in their own economies; and of international remuneration on financial assets and liabilities, such as the payment of interests on money borrowed abroad and of dividends to non-resident shareholders for example.
- **Transfers** are unilateral economic flows that involve changes in ownership of goods and/or financial assets. They often refer to items that are given away rather than exchanged. There are capital transfers and current transfers; the latter only are regarded as current transactions. As an illustration, an international current transfer occurs when the government or a humanitarian organisation gives money, food or medical supplies to another country. The contributions of Member States to the budget of the European Union Institutions are considered as current transfers as well.

## What is the conceptual framework of international transactions?

A country's current international transactions comprise all the transactions between its residents and non-residents. They are recorded in the **balance of payments' current account**.

The **balance of payments** consists of two major accounts: the **current account** takes care of real resources whereas the **capital and financial account** involves financial items.

The processing of these transactions follows the rules put forward in the **fifth edition of the International Monetary Fund Balance of Payments Manual (BPM5)**.

This publication covers only current international transactions, i.e., the current account part of the balance of payments.

## How do countries deal with current international transactions?

International transactions implicate a big variety of real resources. In order to describe all kinds of transactions, the current account is subdivided into a number of accounts. The broadest categorisation differentiates **goods, services, income** and **current transfers**. These four accounts are broken down into very detailed sub-items such as communications services which are in turn subdivided into telecommunications services and postal and courier services.

Current transactions are, in principle, recorded in **gross** flows. Each item should display a **credit** and a **debit** value in order to show exports and imports for this item. Due to problems of identifying gross flows for certain items some transactions are recorded **net**, that is as the difference between a credit and a debit. These offsetting mechanisms have the effect of underestimating credit and debit flows. Whenever they occur, these problems will be mentioned in the definitions below.

### Why are the balance of payments of all the countries in the world not fully compatible or comparable?

#### Problems of consistency, asymmetries

Although in theory, all balance of payments accounts are drawn up in accordance with an internationally accepted methodology, the balance of payments of all the countries in the World are not fully compatible or comparable. There are many reasons for this lack of comparability. The following are some examples:

- Not all countries have the same resources for recording and analysing information and because of the special features of data collection they are sometimes obliged to depart from the recommended standards (in the case of insurance, for example).
- Not all countries agree on the treatment of certain long term activities (e.g. construction services).
- The increasing speed of world-wide economic integration and proliferation of transactions between related companies makes it difficult to allocate flows between services and direct investment.

The statistical problems mentioned above generate statistical discrepancies between countries' current account balances. These discrepancies are called asymmetries. More specifically:

*Bilateral Asymmetry:* The balance declared by one compiling economy in relation to another does not correspond to the balance declared by its partner. The sum of these balances, called bilateral asymmetry should in theory be nil. However, misallocation of transactions creates an asymmetry at detailed item level that can be offset at an aggregated level. In the same way, a poor geographical breakdown creates a bilateral asymmetry which may be offset at an aggregated level of geographical breakdown.

*Asymmetry in terms of geographical aggregation:* the world total of current account credits does not tally with the world total of debits, whereas in theory they should be equal. The difference between current account credits and debits is termed *world-wide asymmetry* (or discordance) of current account payments.

## The current account and its subdivisions

### ➤ Goods

This is generally the biggest category of the current account. **Goods** cover **general merchandise, non monetary gold** and since the implementation of the BPM5, **goods for processing, repairs on goods** and **goods procured in ports by carriers**. The most important component, **general merchandise**, includes all movable goods whose ownership is transferred from a resident to a non-resident and vice-versa.

### ➤ Services

Trade in **services** is the second major category of the current account. If the main part of these transactions is made in a commercial purpose, the services account also allows non-commercial transactions under the item *government services n.i.e.*

Considering its intangible nature, international trade in services is much more difficult to record than trade in merchandise. In certain cases for example, practical difficulties for identifying gross flows may occur as many services can be paid for by means of an international offsetting mechanism. Furthermore, certain transactions between related companies are also settled by an offsetting mechanism. In both cases the identified payment corresponds to the net result of a number of transactions that are difficult to pinpoint. Such problems could involve underestimation of the flows of services.

Transactions in services are many and varied. They include amongst others: the shipping of Italian shoes by a Greek vessel; the construction of a shelter in Switzerland by a German company; the subscription to a British newspaper by a Spanish student; the purchases of souvenirs by a Japanese tourist in France; the profit on the sale of Dutch cheese in Portugal by a Belgian merchant; the payments of annual fees by a German franchisee to its American franchisor.

The item **services** is subdivided in three components: **transportation, travel** and **other services**.

### ➤ Transportation

This item covers all transportation (sea, air and other - including land, international waterway, space and pipelines) services that are performed by residents of one economy for those of another and that involve the carriage of passengers - registered in balance of payments under **passenger services**; the movement of goods - under **freight services**; and rentals (charters) of carriers with crew, and related supporting and auxiliary services - under **supporting, auxiliary and other transport services**.

### ➤ Travel

Item **travel** covers primarily the goods and services acquired from an economy by travellers during visits of less than one year in that economy. The goods and services are purchased by, or on behalf of, the traveller or provided, without a quid pro quo, for the traveller to use or give away. Excluded is the international carriage of travellers, which is covered in passenger services under transportation.

### ➤ Other services

Since services have become increasingly important in international transactions, a greater detail in the breakdown is now required. The item **other services**, which is largely broken down, can not be regarded as a mere residual item as it embraces a wide range of various transactions.

**Other services** reports transactions in **communications services, construction services, insurance services, financial services, computer and information services, royalties and licence fees, other business services, personal, cultural and recreational services** and **government services**.

- ✓ Communications services cover two main categories of international communications transactions between residents and non-residents: telecommunications services and postal and courier services. *Telecommunications* encompass the transmission of sound, images, or other information by telephone, telex, telegram, cable, broadcasting, satellite, electronic mail, facsimile services etc. and include business network services, teleconferencing, and support services. *Postal and courier services* encompass the pick-up, transport and delivery of letters, newspapers, periodicals, brochures, other printed matter, parcels, and packages by national postal administrations and other operators. Also included are post office counter and mailbox rental services.
- ✓ Construction services cover work performed on construction projects and installations by employees of an enterprise in locations outside the economic territory of the enterprise. The work is generally performed for a short time period (less than one year but this rule is to be applied flexibly). Goods imported by the enterprise for use in the projects, and expenditures for local supplies, etc. are included in the value of these services rather than under goods.
- ✓ Insurance services cover the provision of various types of insurance to non-residents by resident insurance enterprises, and vice versa. Such services cover freight insurance, other types of direct insurance (i.e. life - including pension and annuity services, other casualty or accident, health, general liability, fire, marine, aviation, etc. insurance); also included in insurance services are agent commissions related to insurance transactions. International insurance services are estimated or valued by service charges included in total premiums earned rather than by total premiums. Gross premiums and gross claims are recorded as memorandum items.
- ✓ Financial services cover financial intermediary and auxiliary services (except those of insurance enterprises and pension funds) conducted between residents and non-residents. Included are intermediary service fees, such as those associated with letters of credit, bankers' acceptances, lines of credit, financial leasing, and foreign exchange transactions. Also included are commissions and other fees related to transactions in securities - brokerage, placement of issues, underwritings, redemptions, and arrangements of swaps, and options, and other hedging instruments; commissions of commodity futures traders; and services related to asset management, financial market operational and regulatory services, security custody services, etc. Service charges on purchases of International Monetary Fund resources are also included. Financial intermediation services indirectly measured are excluded.
- ✓ Computer and information services cover computer data and news-related service transactions between residents and non-residents. *Computer services* cover hardware and software consultancy and implementation: provision of advice and assistance on matters related to the management of computer resources; analysis, design and programming of systems ready to use, and technical consultancy related to software; development, production, supply and documentation of customised software including operating systems made on order for specific users; maintenance and other support services such as training. Excluded are packaged (non-customised) software and non-specific computer training courses which are treated in the same way as *other educational services*. *Information services* include database services: database conception, data storage, and data dissemination on-line and on magnetic media; news agency services including provision of news, photographs, and feature articles to the media; and direct, non-bulk subscriptions to newspapers and periodicals.
- ✓ Royalties and licence fees cover the exchange of payments and receipts between residents and non-residents for the authorised use of intangible, non-produced, non-financial assets and proprietary rights (such as patents, copyrights, trademarks, industrial processes, franchises, etc.) and with the use, through licensing agreements, of produced originals or prototypes (such as manuscripts and films).
- ✓ Other business services cover various categories, other than those previously defined. The grouping of these services is not indicative of their relative importance. The three following categories are identified:
  - Merchanting and other trade-related services cover commissions on goods and services transactions between (i) resident merchants, commodity brokers, dealers, and commission agents and (ii) non-residents.

Merchanting is defined as the purchase of a good by a resident from a non-resident and the subsequent resale of the good to another non-resident; during the process, the good does not enter or leave the compiling economy. The difference between the value of goods when acquired and the value when sold is recorded as the value of merchanting services provided.

Other trade-related services include transactions in ships, aircraft, and auction sales. Franchising fees, brokerage in financial services and transport-related fees are excluded.

- Operational leasing services (rental) without operators cover resident/non-resident leasing and charters of ships, aircraft, and transportation equipment such as railway cars containers, rigs, etc. without crew. Financial leasing, leasing of telecommunications lines and leasing of land, buildings and other real estate, and car rentals to foreign travellers are excluded.

- Miscellaneous business professional and technical services are subdivided into:

Legal, accounting, management consulting, and public relations services which cover the provision (by/for residents for/by non-residents) of legal advice, representation, and documentation; auditing, bookkeeping, and tax consultant services; and management consulting related to the provision of advice, guidance, or operational assistance to business.

Advertising, market research and public opinion polling services transacted between residents and non-residents cover the design, creation, and marketing of advertisements by advertising agencies; media placement, including the purchase and sale of advertising space; exhibition services provided by trade fairs; the promotion of products abroad; market research; and public opinion polling abroad on various issues.

Research and development services cover those services that are transacted between residents and non-residents and associated with basic research, applied research, and experimental development of new products and processes. In principle, such activities in the sciences, social sciences, and humanities are covered; included is the development of operating systems that represent technological advances. Market research, technical studies, and consultancy work are excluded.

Architectural, engineering and other technical services cover resident/non-resident transactions related to architectural design of urban and other development projects; planning and project design and supervision of dams, bridges, airports, turnkey projects, etc.; surveying, cartography, product testing and certification, and technical inspection services.

Agricultural, mining and on-site processing services cover services incidental to agriculture, hunting, trapping, forestry and logging, and fishing; services rendered at oil and gas fields; waste treatment and depollution services; sanitation and other on-site processing.

Other miscellaneous business, professional and technical services cover placement of personnel, security and investigation services, translation and interpretation, photographic services, building cleaning, etc.

Services between affiliated enterprises, n.i.e. is a residual category. It covers payments by affiliates to their parent companies for general management costs (for planning, organising and controlling) and reimbursements of expenses settled directly by parent companies, funds transferred by parent companies to affiliates for covering overhead expenses, and any other services between affiliated enterprises that cannot be broken into individual service categories.

- ✓ Personal, cultural and recreational services involving transactions between residents and non-residents are subdivided into two categories:

- Audiovisual and related services comprise services and associated fees related to the production of motion pictures, radio and television programs, and musical recordings.
- Other personal, cultural and recreational services comprise services such as those associated with museums, libraries, archives, and other cultural, sporting, and recreational activities. Also included are fees for services, including provision of correspondence courses, rendered abroad by teachers or doctors. All expenditures by travellers on education and health are excluded.

- ✓ Government services, n.i.e. is a residual category covering government service transactions (including those of international organisations) not contained in previous classifications. Included are all transactions by embassies, consulates, military units, and defence agencies with residents of economies in which the embassies, etc. are located and all transactions with other economies.

Transactions in this category comprise those for goods and services (such as office supplies, furnishings, utilities, official vehicles and operation and maintenance, and official entertainment) and personal expenditures incurred by diplomats and consular staff and their dependants in the economies in which they are located. Also included in

this category are transactions, by other official entities (such as aid missions and government tourist, information, and promotion offices) located in economies abroad. Included, as well, are transactions that are associated with general administrative expenditures, etc. and not classified elsewhere. In addition, transactions associated with aid services that are provided by non-military agencies, do not give rise to any payments, and have offsets in transfers are included in this category. Last, transactions associated with the provision of joint military arrangements and peacekeeping forces, such as those of the United Nations, are included in *government services, n.i.e.*.

## ► Income

**Income** contains two main items:

**Compensation of employees** records wages, salaries and other benefits, in cash or in kind, earned by individuals for work performed for economic units whose place of residence is different from their own (border workers, seasonal workers, employees of international organisations, etc.).

**Investment income** covers income which a resident entity derives from the ownership of external financial assets (credit) and income non-residents derive from their financial assets invested in the compiling economy (debit). This includes interest and dividends on direct, portfolio and other investments.

## ► Current transfers

**Current transfers** form a group separate from **goods, services** and **income** because they are generally conceived as showing distinctive characteristics. However, the distinction between real resources and transfers is sometimes rather arbitrary. For example, receipts by an economy from certain individuals working abroad are classified either as current transfers or as compensation of employees, depending on how long the individuals have stayed in the countries where they are working. The BPM5 sets a number of criteria that enable to establish whether a flow is a current transfer or not.

Current transfers are all transfers that are not transfers of capital. Therefore, they consist of all transfers that do not involve:

- transfers of ownership of fixed assets,
- transfers of funds linked to, or conditioned upon, acquisition or disposal of fixed assets,
- forgiveness of liabilities by creditors when no counterpart is received in return.

Current and capital transfers may also be distinguished from their effects: current transfers directly affect the level of disposable income and should affect the consumption of goods and services whereas capital transfers should result in changes in the stocks of assets of one or both parties to the transaction.

This publication concerns EU international transactions between 1991 and 2001, and is divided into two parts.

The first part is analytical and gives the most recent portrait of European Union (EU-15) international transactions. It highlights the main trends of EU trade in services in 2001 and underlines the results of the EU with its main partner zones. An analysis of the euro-zone trade in services is also provided.

The second part presents statistics on international trade in services of the EU and the euro-zone (EUR-12) with partner World, extra-EU/EUR-12, intra-EU, Canada, the United States and Japan, for the main current account items (goods, income, current transfers...) and 47 items of internationally tradable services. The period covered is from 1991 to 2001. Statistics are also available for 2001 on the geographical breakdown (in relation to 50 partner zones and 23 items) of the current account of the EU, the euro-zone, Norway, the United States and Japan.

To allow comparisons, these figures have been harmonised according to a common methodology.

Information is also given on the methodological framework of the 5th IMF manual which is used for current international transactions. All flows are expressed in Euro (in Ecu to end 1998).
