Foreword

1. Introduction

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the Community's external trade. In particular, it contains data on the Community's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the Community in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The Community's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Monthly external trade of the EEC).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all the Community languages.

2. Sources

Since 1978, the Member States have transmitted Community external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States; these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized Community statistics and to ensure their quality.

3. Coverage

The results of the Community statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of Community goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by Community statistics.

4. Statistical territory

The statistical territory of the Community comprises the customs territory of the Community excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

5. *Goods classification*

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

6. *Trading partners: countries and economic areas*

The Community results are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on Community external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the Community are imported, Community statistics state the country of origin. When such goods are exported, the country of destination is specified.

7. *Units*

Values

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each Community currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-Community trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

Quantity

The statistics give the net weight of the goods.

8. *Confidentiality*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the Community as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

9. *Corrections*

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

Indices

1. Introduction

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, Community indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

2. Sources of data

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

3. Extreme values

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

4. Classification used

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

TOTAL: all commodities;
0+1: foods, beverages and tobacco;
2+4: crude materials, except fuels;
3: fuels
5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

5. *Types of indices and rebasing*

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

6. *General comments*

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

The Community Trade Agreement (CTA) is a significant milestone in the history of the community. It represents a commitment to the values of transparency, accountability, and integrity. The agreement is designed to ensure that the community's resources are managed in a responsible and sustainable manner. It also provides a framework for the community's future development and growth. The CTA is a testament to the community's strength and resilience, and it is a source of pride for all its members.

Trends in Community trade

The trends in community trade are a reflection of the community's changing needs and priorities. As the community grows and evolves, its trade patterns will continue to shift. It is important to stay abreast of these trends and to adapt accordingly. The CTA provides a framework for this adaptation, ensuring that the community's trade remains fair and equitable for all its members.

Seasonal Adjustments: Results

Following a period of relative stability from mid-1991, the seasonally adjusted European Community exports to the rest of the world have risen steadily in 1993 (an increase of 7 % during the first seven months, compared to the same period in 1992). Despite this trend, the exports for July 1993 were down by 1.2 % on June's figures.

Although the figures for the seasonally adjusted importation of goods to the European Community from the rest of the world have risen slightly during the last two months (+0.5 % in June and +0.1 % in July) the figures for the year-to-date indicate a

gradual reduction in imports, reflecting the economic slowing down in most Member States. However, this tendency is subject to significant variations.

The European Community's seasonally adjusted trade balance has been improving steadily since early 1992. After a first trade surplus in May 1993, the balance remained positive in June (+0.8 billion ECU) and July (+0.3 billion ECU). This result is mainly because of increasing exports at the same time as import levels are falling (-3.1 % for the first seven months of 1993, compared to 1992).

GLOBAL TRENDS IN EXTERNAL TRADE

EXTRA-COMMUNITY TRADE: Results for July 1993.

For the first seven months of 1993, the Community's trade deficit was ECU 10.5 billion, the United States' ECU 62 billion and Japan's surplus close to ECU 60 billion.

From January to July 1993, the **Community** accumulated a trade deficit of ECU 10.5 billion, an improvement of nearly ECU 28 billion on the same period in 1992. Exports to non-Community countries in the period under review were 5.8% higher than in the first seven months of 1992, while imports were 4.4% lower.

The United States' cumulative deficit for the first seven months of 1993, at ECU 62 billion, was around ECU 22 billion greater than for the same period in 1992. Imports, up nearly 18% in terms of ecus (9.5% in dollars), outstripped exports (10.4% in ecu terms and 2.7% in dollars).

Japan's trade surplus for the first seven months of 1993 was nearly ECU 60 billion, up from ECU 47 billion for the same period in 1992. Japanese exports between January and July 1983 showed a marked increase on the same period in 1992: 15.3% in ecu terms or 7.1% in dollars. Imports rose by 10.3% in ecus and 2.4% in dollars. In yen terms, exports fell by 1.4% and imports 8.1%.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTRA-COMMUNITY TRADE OF INDIVIDUAL MEMBER STATES: Results for July 1993. Germany's cumulative extra-Community surplus from January to July 1993 amounted to ECU 10 billion .

Most of the Member States' cumulative extra-Community balances over the first seven months of 1993 were an improvement on the same period in 1992. Germany recorded a surplus of ECU 9.6 billion, ahead of Italy's ECU 4.5 billion. Both these countries thus had improvements of ECU 7 billion in their foreign trade positions by comparison with January-July 1992. Denmark and France ran surpluses of ECU 1.7 billion and ECU 1.3 billion, an improvement of ECU 1 billion and ECU 0.6 billion respectively. Ireland's cumulative surplus totalled

ECU 0.3 billion. With a deficit of ECU 0.5 billion, the BLEU improved its position by ECU 3.5 billion on January-July 1992. Portugal and Greece incurred similar deficits to those for the first seven months of 1992, at ECU 1.4 billion and ECU 2.4 billion respectively. Spain and the Netherlands trimmed their deficits by ECU 4.4 billion and ECU 3.2 billion, to total ECU 3.2 billion and ECU 8 billion respectively for the first seven months of 1993. The United Kingdom showed the greatest deficit, at ECU 12.3 billion, despite an improvement of ECU 0.8 billion.

EXTRA-COMMUNITY TRADE BY PARTNER COUNTRY.

TRADE IN VALUE TERMS: Results for July 1993.

The trade deficit with the industrialised countries fell by ECU 15 billion between January and July 1993, compared with the same period in 1992, due to a marked decline in imports from those countries.

Over ECU 15 billion of the improvement in the Community's trade balance between the first seven-month periods of 1992 and 1993 stemmed from the reduced deficit with the **industrialised countries**. Trade with the United States and Canada from January to July 1993 generated a cumulative deficit of ECU 5 billion, an improvement of more than ECU 6 billion on the same period in 1992. The trade deficit with Japan came to ECU 15 billion, as against ECU 19 billion in January-July 1992. A deficit of ECU 2.2 billion with the EFTA countries represented an improvement of ECU 1.2 billion, and the surplus of nearly ECU 4 billion in Community trade with the other countries of Western Europe was ECU 2.3 billion better than for the first seven months of 1992.

The 8.1% drop in imports from the industrialised countries was more marked than for total imports from outside the Community (-4.4%). Imports from the United States and Canada were down by 6.9%. Between January and July 1993 and the same period in 1992 these cost 8% more in ecu terms due to changes in dollar-ecu rates. Imports from Japan declined by 12.5%, partly due to the rise of the yen against the ecu (over 20%). Imports from the EFTA countries were down nearly 6% between the first seven months of 1993 and the same period in 1992.

Exports to the industrialised countries rose slightly (0.8%), with the boost in flows to the United States (5%) offset by the downturn in goods exported to the EFTA countries (-4.3%). Exports to Japan showed a modest improvement (1%).

Trade with the **developing countries** generated a cumulative surplus of ECU 12.4 billion for the first seven months of 1993, i.e. ECU 9.5 billion more than in January-July 1992. The trade surplus with the Mediterranean countries expanded by ECU 5 billion. Trade with Latin America and the ACP countries, which had been in

deficit in January-July 1992, showed surpluses for the corresponding period in 1993, with recoveries of ECU 4 billion and ECU 3 billion respectively. The balance with the Asian NICs improved by ECU 2.7 billion to reach ECU 1.7 billion for the first seven months of 1992. The deficit with the OPEC countries improved by ECU 0.5 billion to a modest ECU 0.2 billion.

Imports from the developing countries in January-July 1993 were down 5.3% on the same period in 1992. Imports from the OPEC countries fell by 7.4%, although the cost of the Community's crude oil supplies remained stable in ecu terms. Imports from the Mediterranean countries, from Latin America and the ACP countries slumped (by 10.3%, 15.4% and 27.3% respectively). Imports from the Asian NICs were roughly on a par with the first seven months of 1992 (-0.2%).

Exports to the developing countries increased by 5.5%, buoyed up by rising trade with the Mediterranean countries (10%), Latin America (15.5%) and the Asian NICs (16.6%), which offset reduced flows to the ACP countries (-0.8%). Exports to the OPEC countries declined by 5.5% between January-July 1992 and the same period in 1993.

Community trade with the countries of **Central and Eastern Europe** was in surplus by ECU 1.2 billion for the first seven months of 1993, an improvement of ECU 2 billion on the corresponding period in 1992. Imports from these countries were up 6.6%, while Community exports to them soared by 16.1%.

At ECU 4.4 billion in January-July 1993, the trade deficit with **China** showed an improvement of ECU 1.6 billion. Imports from China rose by 15%, but Community exports to China shot up by 86.6% between January-July 1982 and the same period in 1993.

EXTRA-COMMUNITY TRADE BY PARTNER COUNTRY.

TRADE IN VOLUME TERMS: Results for the second quarter of 1993.

Imports from the industrialised countries declined by 12% in volume in the first half of the year, while exports to those countries fell by 7% in the first quarter and then grew by 2% in the second.

Community imports in the first half of 1993 lost 6% by volume on the first half of 1992, while exports in the first quarter of 1993 held steady in relation to the same period in 1992 before climbing by 10% in the second quarter.

Flows from the **industrialised countries** contracted by nearly 12% between the first halves of 1992 and 1993. Year-on-year, imports from the United States were down 10% in the first quarter of 1993, and 14% in the second quarter of 1993. The decline in imports from the EFTA countries was more modest: -10% in the first quarter of 1993, and -4% in the second. On the other hand, imports from Japan plummeted by 20% in the first half of 1993.

Exports to the industrialised countries fell by 7% in the first quarter and made slight gains between the second quarters of 1992 and 1993. Flows to Japan showed the same pattern. Exports to the United States were down 5% in the first quarter of 1993 and up 10% in the second. Exports to the EFTA countries showed a downward

trend in both the first and second quarters of 1993 (-10% and -5% on the corresponding periods in the previous year).

Imports from the **developing countries** dropped by nearly 6% between the first halves of 1992 and 1993. Flows from the Asian NICs were down 10% in the first quarter and 4% in the second. In volume terms, imports from the OPEC countries fell by 8% in the first half of 1993, and those from the ACP countries by almost 27%. Imports from the Mediterranean countries rose by 7% in the first quarter of 1993 and by 12% in the second.

Exports to the developing countries gained 8% in volume terms between the first quarters of 1992 and 1993, and 12% between the second quarters, on the strength of increases of 8% and 20% to the Asian NICs and of 12% and 25% to the Mediterranean countries. Volumes to the OPEC countries were down 6% in the first quarter and 2% in the second. Exports to the ACP countries rose slightly (3%) in the first quarter and declined (2%) in the second.

EXTRA-COMMUNITY TRADE BY PRODUCT

TRADE IN VALUE TERMS: Results for July 1993.

Exports of machinery and transport equipment (SITC 7) and chemicals (SITC 5) in the first seven months of 1993 grew by nearly 10% on the corresponding period of 1992.

The cumulative surplus on trade in **machinery and transport equipment** (SITC 7) for the first seven months of 1993 came close to ECU 27 billion, an increase of ECU 11 billion on the corresponding period of 1992. The surplus on **chemicals** (SITC 5) rose by ECU 4 billion to ECU 15.7 billion. The reduced deficit in "other manufactured goods" (SITC 6+8) contributed ECU 2 billion to the improvement in the Community balance. The trade deficit in **energy products** (SITC 3) improved by ECU 4.8 billion to approximately ECU 27 billion. The deficits in crude materials (SITC 2+4) and food products (SITC 0+1) each grew by around ECU 2.5 billion. In the first seven months of 1993 they amounted to ECU 12.5 billion and ECU 0.7 billion.

Imports of machinery and transport equipment fell by 2.5% between January-July 1993 and the corresponding period of 1992, while imports of "other manufactured goods" rose by 2.2%. Imports of chemicals declined by 2.2%. Imported **energy products** were down 5.8% in cumulative terms over January-July 1992. Imports of crude materials and food products showed more marked declines of 11.5% and 9.2% respectively.

Exports of **machinery and transport equipment** made strong advances (8.7%), followed by "other manufactured products" (5.2%). Chemical exports were 11.2% higher than in the first seven months of 1992. Community food exports remained stable (0.9%).

EXTRA-COMMUNITY TRADE BY PRODUCT

TRADE BY VOLUME: Results for the second quarter of 1993.
Imports of machinery and transport equipment (SITC 7) fell by 10% in the first half of 1993,
while exports flagged slightly in the first quarter before gaining 10% in the second.

In the first half of 1993, imports of **machinery and transport equipment** (SITC 7) fell by nearly 10%. Imports of **chemicals** were down by 9% between the first quarters of 1992 and 1993 and by 6% between the second quarters. The volume of **"other manufactured goods"** (SITC 6+8) imported more or less held steady at the level of the first half of 1992. Imports of **energy products** (SITC 3) slipped by 9% and 6% in the first and second quarters of 1993. Imports of **crude materials** (SITC 2+4) and of **food products** (SITC 0+1) declined by nearly 6% between the first halves of 1992 and 1993.

Exports of **machinery and transport equipment** lost 2% by volume between the first quarters of 1992 and 1993, but gained 10% in the second quarter of 1993. Exports of **chemicals** and **"other manufactured goods"** climbed 4% in the first quarter and then 10% in the second quarter of 1993. Community food exports in the first half of 1993 were nearly 7% up on the figures for the first half of 1992.
