Foreword

1. Introduction

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the European Union's external trade. In particular, it contains data on the European Union's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the European Union in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The European Union's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Intra and extra-EU trade).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all languages of the European Union.

2. Sources

Since 1978, the Member States have transmitted European Union external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States; these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized European Union statistics and to ensure their quality.

3. Coverage

The results of the European Union statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of European Union goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by European Union statistics.

4. Statistical territory

The statistical territory of the European Union comprises the customs territory of the European Union excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

5. *Goods classification*

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

6. *Trading partners: countries and economic areas*

The results of the European Union are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the European Union are imported, EU statistics state the country of origin. When such goods are exported, the country of destination is specified.

7. *Units*

Values

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

Quantity

The statistics give the net weight of the goods.

8. *Confidentiality*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the European Union as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

Indices

1. Introduction

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, European Union indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

2. Sources of data

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

3. Extreme values

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

4. Classification used

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

TOTAL: all commodities;
0+1: foods, beverages and tobacco;
2+4: crude materials, except fuels;
3: fuels
5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

5. *Types of indices and rebasing*

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

6. *General comments*

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

Trends in European Union trade

Seasonal Adjustments: Results

After a period of relative stability lasting from mid-1991 to early 1993, figures for the European Union's exports to the rest of the world, adjusted for seasonal variations, have since climbed steeply (+9.6% for the first 11 months of the year compared with the same period in 1992). This tendency was amplified by the figure for November 1993, up 1.5% on the previous month's.

Seasonally-adjusted figures for the Union's imports from the rest of the world had been falling fairly steadily since mid-1991, but

became extremely volatile during the early months of 1993. Since then imports have remained relatively stable and, after peaking in August, imports in November showed growth of just 0.7% over October.

The Union's balance of trade has been improving since the third quarter of 1991 and, adjusted for seasonal variations, was in surplus during November for the sixth time in 1993 (+1.4 bn ecus). Over the past twelve months the balance of trade has been reduced to 10.9 bn ecus.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTERNAL TRADE OF THE EUROPEAN UNION: Results for November 1993.
The difference in export and import trends between the first eleven months of 1992 and 1993 was + 10 points for the European Union, - 7 points for the United States, + 3 points for Japan.

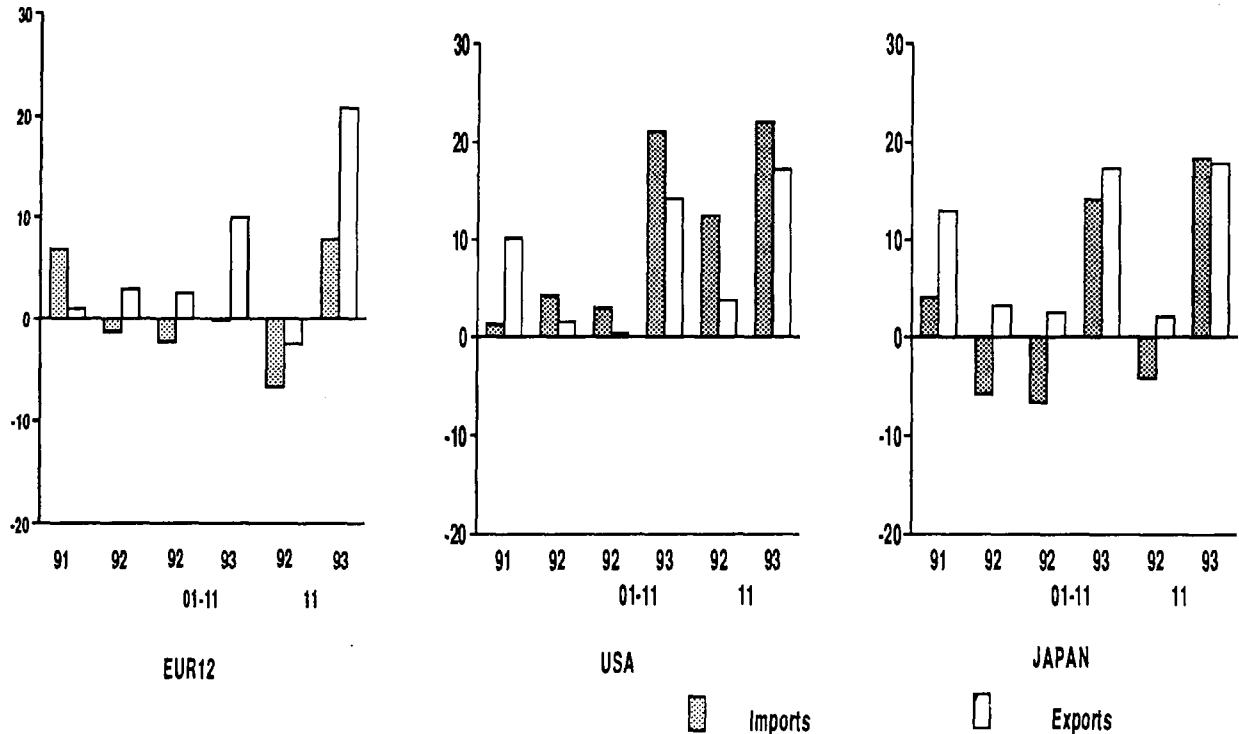

The trade deficit of the **European Union** for the first eleven months of 1993 was around ECU 10 billion, compared with almost 50 billion for the corresponding period of 1992. Imports into the EU fell slightly between January-November (-0.2%), while exports to countries outside the European Union rose sharply: 9.9%.

The trade balance of the **United States** was in deficit by ECU 110.8 billion for the period January-November 1993, a deterioration of some 37 billion compared with the corresponding months of 1992. Imports to

the United States increased by 21.1% in ecus between the first eleven months of 1992 and 1993, and by 9% in dollars. Exports from the United States were up by 14.1% in ecus and by 3% in dollars.

In November 1993, **Japan's** cumulative trade surplus as from January 1993 was ECU 93 billion, an increase of ECU 18 billion compared with January-November 1992. Exports from Japan increased by 17.2% in ecus and by 6% in dollars and fell by 6% in yen. Imports to Japan rose by 14.1% in ecus and by 3% in dollars, and recorded a drop of almost 5% in yen.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTERNAL TRADE OF THE MEMBER STATES: Results for November 1993.
Germany and Italy had the highest surpluses for January-November 1993 and also recorded the most marked improvements compared to the corresponding period of 1992.

Germany and Italy had the highest external trade surpluses for the first eleven months of 1993, with balances of ECU 15.9 billion and ECU 8.7 billion respectively. The Italian surplus was ECU 11.6 billion higher than in January-November 1992. Italian exports rose by 15.8% between the first eleven months of 1992 and 1993. Imports to Italy fell by 6% between the two periods.

The German surplus increased by ECU 8.7 billion. Germany's exports rose by 6.4%, whereas imports remained stable.

The trade deficits of **Spain, the Netherlands and the BLEU** rose by ECU 6.8 billion, 5.1 billion and 4.9 billion respectively between the first eleven months of 1992 and 1993. Exports by these countries grew by around 18%. Imports fell by 15% in Spain, whereas those of the Netherlands and the BLEU were down by almost 3%.

The external trade balances of the **United Kingdom and France** improved by ECU 1.4 billion each. United Kingdom exports rose by 15%, compared to a 9% increase in the country's imports. Trade flows in France were more subdued: +0.2% for exports and -2% for imports.

The trade balances of **Denmark, Ireland and Portugal** increased by less than ECU 0.2 billion compared to January-November 1992. Danish imports recorded a decline of 1.3%, while exports fell by 1.5%. Trade flows in Ireland increased by 38% in the case of imports and 36% in the case of exports. Portugal's external trade recorded a fall of 3.5% in the case of imports, and of 4.3% in the case of exports.

Only the **Greek** trade deficit declined (by ECU 0.4 billion) with exports rising more sharply (21.1%) than imports (16.6%).

EUROPEAN UNION EXTERNAL TRADE BY PARTNER COUNTRY

TRADE BY VALUE: Results for November 1993.

In the first eleven months of 1993 trade with the United States was in deficit by ECU 2.5 billion, compared with ECU 12.8 billion for the corresponding months of 1992.

The European Union's trade deficit with the industrialised countries was ECU 23.4 billion in the first eleven months of 1993. This was almost half the deficit for the corresponding months of 1992. Trade with the United States and Canada showed a deficit of ECU 2.5 billion, a reduction of some ECU 10 billion. The trade deficit with Japan improved by almost ECU 5 billion and was now equal to the deficit with the industrialised countries. The trade balance with EFTA countries was - ECU 3.3 billion in January-November, which was identical to the balance for the corresponding months of 1992. Trade with the other countries of Western Europe recorded a surplus of ECU 6.5 billion, an increase of ECU 4.2 billion.

Imports from the industrialised countries fell by 3.8% between January-November 1992 and 1993. This decline affected all zones. Made more expensive owing to the change in the dollar-ecu parity (more than +10%), imports from the United States and Canada fell by 2%. Imports from the EFTA countries declined by 2.3%. Imports from Japan were 7.8% down on the level for the corresponding eleven months of 1992, while the yen rose more than a quarter against the ecu between January-November 1992 and January-November 1993.

Exports to the industrialised countries rose by 5.3%. This increase was sustained by exports to the United States and Canada (11.4%), encouraged by the dollar-ecu parity. Exports to Japan benefited from a similar exchange-rate phenomenon and increased by 7.9% compared to January-November 1992. Exports from the European Union to the EFTA countries fell by 2.5%, while those to the other Western European countries rose by more than a fifth.

Trade with the developing countries recorded a surplus of ECU 19.5 billion in the first eleven months of 1993, or ECU 13.7 billion more than in January-November 1992. The trade balance with the Mediterranean countries improved by some ECU 9 billion to ECU 12.2 billion. The deficits observed in the first

eleven months of 1992 with the Latin American countries, Asian NICs and ACP countries were transformed into surpluses in the corresponding period of 1993, improving by almost ECU 5.4 billion and 3 billion respectively. Trade with the OPEC countries showed a slight surplus (ECU 1 billion) in January-November 1993, whereas they had recorded a deficit of ECU 1.2 billion in the first eleven months of 1992. Imports from the developing countries fell sharply (-0.7%). Imports from the OPEC countries fell by 6.8%, whereas the cost of the Community's crude oil supplies expressed in ecu per barrel showed a sustained downturn after September 1993. Products imported from Mediterranean countries declined by 7%. Imports from Latin American countries showed the same trend (-9.8%), while those from the ACP countries fell by about a fifth between the first eleven months of 1992 and those of 1993. Only imports from Asian NICs increased, by 6.4%.

Exports to the developing countries rose sharply in January-November 1993: +9.3%. Exports to the Mediterranean countries, the Latin American countries and the Asian NICs recorded the highest increase: +16%, +17% and +22.1%. Exports to the OPEC countries and to the ACP countries fell by 3.5%.

The trade balance with the countries of **Central and Eastern Europe** was in surplus by almost ECU 2 billion for the period January-November 1993, whereas it was in deficit by ECU 1.7 billion in January-November 1992. Imports from the Central and Eastern European countries rose by 7.3%. Exports from the European Union to this zone rose sharply: +19.4%.

Trade with **China** was in deficit by ECU 7.9 billion compared with ECU 9.4 billion for the first eleven months of 1992. Imports from China increased by some 17%, whereas exports from the European Union to China rose by 68.4%.

EUROPEAN UNION EXTERNAL TRADE BY PRODUCT

TRADE BY VALUE: Results for November 1993.

Exports of manufactured goods (SITC 5-8) increased by 11.8% between January-November 1992 and January-November 1993.

Trade in **machinery and transport equipment** (SITC 7) recorded a surplus of ECU 46.3 billion in the first eleven months of 1993, an increase of some 18 billion over January-November 1992. The balance in **chemicals** (SITC 5) improved by ECU 7.0 billion to reach ECU 26 billion. The deficit in other manufactured goods (SITC 6+8) was down by 2.3 billion, finishing at around ECU 13 billion.

The trade deficit in fuel products (SITC 3) improved by ECU 7.2 billion between January-November 1992 and 1993. Trade in crude materials (SITC 2+4) recorded a smaller deficit than in the first eleven months of 1992 (a difference of ECU 2.7 billion). Trade in food etc. (SITC 0+1), which was - ECU 3.4 billion in the first eleven months of 1992, was almost in balance (- ECU 0.4 billion) for the corresponding period of 1993.

Imports of **other manufactured goods** rose sharply between January-November 1992 and 1993: +6.5%, with a lower increase for machinery and transport equipment: +1.8%. Imports of chemicals rose slightly (+0.7%). Imports of fuel products and crude materials fell by 4.4% and 6.7% respectively between the first eleven months of 1992 and those of 1993. Imports of food etc. fell by 2.8%.

Exports of **machinery and transport equipment** rose by 12.5%, while other manufactured goods and chemicals also recorded marked increases: +9.3% and +15.7%. Exports of food etc. were 6.4% higher than the level in January-November 1992.

(1) The ECU is a "basket" monetary unit based on the market exchange rates of certain quantity of each European Union currency weighted on the basis of the average gross national product over five years and of the intra-EU trade of each Member State. The rates used here are averages of the daily rates.
