Foreword

1. Introduction

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the European Union's external trade. In particular, it contains data on the European Union's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the European Union in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The European Union's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Intra and extra-EU trade).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all languages of the European Union .

2. Sources

Since 1978, the Member States have transmitted European Union external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States; these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized European Union statistics and to ensure their quality.

3. Coverage

The results of the European Union statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of European Union goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by European Union statistics.

4. Statistical territory

The statistical territory of the European Union comprises the customs territory of the European Union excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

5. Goods classification

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

6. Trading partners: countries and economic areas

The results of the European Union are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the European Union are imported, EU statistics state the country of origin. When such goods are exported, the country of destination is specified.

7. Units

Values

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

Quantity

The statistics give the net weight of the goods.

8. Confidentiality

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the European Union as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

9. Corrections

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

Indices

1. Introduction

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, European Union indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

2. Sources of data

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

3. Extreme values

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

4. Classification used

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

- TOTAL: all commodities;
- 0+1: foods, beverages and tobacco;
- 2+4: crude materials, except fuels;
- 3: fuels
- 5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

5. Types of indices and rebasing

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

6. General comments

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

Trends in European Union trade

SEASONAL ADJUSTMENTS: RESULTS

Following a steady rise in 1993, the high level of European Union exports to the rest of the world, adjusted for seasonal variations, seems set to continue in early 1994. The growth rate for the first two months of 1994 was 18.3% up on that of the same period of 1993. The month-to-month trend shows a slight slow-down, however (+0.1% in January 1994 but -0.6% in February).

Despite the marked instability observed since the beginning of 1993, seasonally-adjusted European Union imports from the rest of the world showed an

upward trend in the second half of 1993. This continued into 1994, particularly in January 1994 compared with January 1993 (+14.8%). There is still some uncertainty about whether this increase will last, as shown by the result for February 1994 (2.7% down on January 1994).

As a result of the improvement observed since the third quarter of 1991, the Union's seasonally-adjusted balance of trade for the first two months of 1994 was in equilibrium at ECU +0.1 bn, despite a slight deficit in January.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTERNAL TRADE OF THE EUROPEAN UNION: Results for February 1994.
 The gap between the rates of change between exports and imports during the first two months of 1994 was +8.3 points on behalf of the European Union, -8.1 points for the United States and +0.7 points for Japan (*).

The European Union's external trade deficit in the first two months of 1994 was ECU 5.1 billion, compared to ECU 9.6 billion for the corresponding period in 1993. Sharply higher extra-EU exports were recorded (+17.9%) between these two periods, while imports grew less (+9.6%).

The trade deficit of the **United States** widened by ECU 6.6 billion, to ECU 19.3 billion between the first two months of 1993 and 1994. US imports rose by 19.2% in ECU and 11.7% in dollars compared to the

same period the previous year. Exports increased more slowly, by 11.1% in ecus and 3.4% in dollars.

The **Japanese** surplus increased by ECU 2.8 billion to ECU 19.2 billion in the first two months of 1994 compared to the same period of 1993. Exports increased sharply up in ecus (15.3%), while they declined by almost 7% in yen and rose 6.7% in dollars. Japanese imports increased by 14.6% in ecus between the two first months of 1993 and 1994; they decreased by 5.8% in yen and rose 6.8% in dollars.

(*) These figures should be regarded with caution due to the introduction of the INTRASTAT system in the beginning of 1993.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTERNAL TRADE OF THE MEMBER STATES: Results for February 1994.
Germany and Italy registered the largest extra-EU surplus in the first two months of 1994 (ECU 2.4 and 1.0 billion respectively), while United Kingdom and the Netherlands registered the biggest deficits, with ECU -4.6 and -3.0 billion respectively.

Germany increased its extra-EU surplus by ECU 0.2 billion to ECU 2.4 billion between the two first months of 1993 and 1994. The rate of variation of both imports and exports was nearly the same (around 6.8%). **Italy** registered a surplus of ECU 1.0 billion during the period January-February 1994, compared to a deficit of ECU 0.3 billion in the corresponding period of 1993. Extra-EU exports rose 16.4%, while imports increased by 1.6% between the two first months of 1993 and 1994.

The trade deficits of the **United Kingdom** and the **Netherlands** increased by ECU 0.5 billion and 0.6 billion respectively between the periods January-February of 1993 and 1994. While imports of both countries advanced sharply (20.7% and 14.6% respectively), exports increased by 24.1% in the case of the United Kingdom and by 9.2% for the Netherlands.

The **BLEU** and **France** saw their extra-EU trade balances for the first two months of 1994 improve by ECU 0.7 billion and 2.9 billion respectively, when

compared to the same period of 1993. BLEU's extra-EU exports increased by 43.7%, while imports increased also strongly (19%). In the case of France, while exports increased by 31%, imports decreased by 1.6%.

Denmark, Ireland and Greece did not experience significant variations of their trade balances between the periods January-February of 1993 and 1994; these balances amounted to ECU +0.3 billion, ECU -0.1 billion and ECU -0.5 billion respectively. However, these three countries experienced large variations of both their imports (+15.8%, +24.8% and +31.9% respectively) and their exports (+12.8%, +33.9% and +64.9% respectively) during these two periods.

Spain's trade balance improved ECU 0.5 billion between the two first months of 1993 and 1994 from ECU -1.1 billion to ECU -0.6 billion. **Portugal** registered a trade deficit of ECU -0.4 billion in the first two months of 1994.

(1) The ECU is a 'basket' monetary unit based on the market exchange rates of certain quantity of each European Union currency weighted on the basis of the average gross national product over five years and of the intra-EU trade of each Member State. The rates used here are averages of the daily rates.
