Foreword

1. Introduction

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the European Union's external trade. In particular, it contains data on the European Union's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the European Union in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The European Union's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Intra and extra-EU trade).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all languages of the European Union .

2. Sources

Since 1978, the Member States have transmitted European Union external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States: these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized European Union statistics and to ensure their quality.

3. Coverage

The results of the European Union statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of European Union goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by European Union statistics.

4. Statistical territory

The statistical territory of the European Union comprises the customs territory of the European Union excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

5. *Goods classification*

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

6. *Trading partners: countries and economic areas*

The results of the European Union are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the European Union are imported, EU statistics state the country of origin. When such goods are exported, the country of destination is specified.

7. *Units*

Values

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

Quantity

The statistics give the net weight of the goods.

8. *Confidentiality*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the European Union as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

9. *Corrections*

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

Indices

1. Introduction

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, European Union indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

2. Sources of data

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

3. Extreme values

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

4. Classification used

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

TOTAL: all commodities;
0+1: foods, beverages and tobacco;
2+4: crude materials, except fuels;
3: fuels
5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

5. *Types of indices and rebasing*

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

6. *General comments*

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

Trends in European Union trade

SEASONAL ADJUSTMENTS: RESULTS

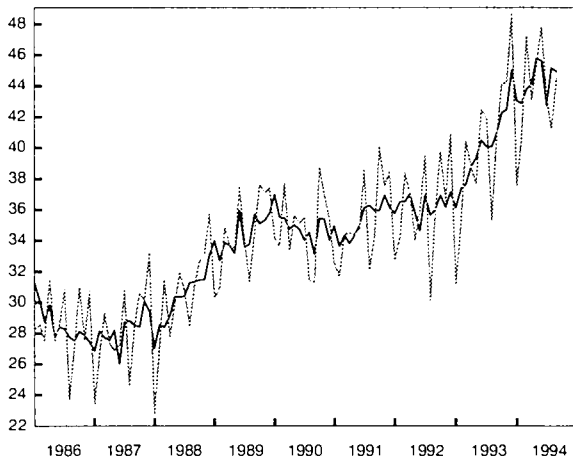

After fairly steady improvement from the start of 1993 the seasonally-adjusted figures for the European Union's exports to the rest of the world have been showing signs of a slight downturn since May 1994, a trend which is borne out by the figures for September (down by 0.5% compared with August). This recent trend offsets to some extent the growth recorded since the start of the year: +13.5% for the first nine months of the year and +9.7% for the third quarter.

Since the start of 1994 the seasonally-adjusted figures for the European Union's imports from the rest of the world have remained stable at a high level. Fluctuations since January have kept

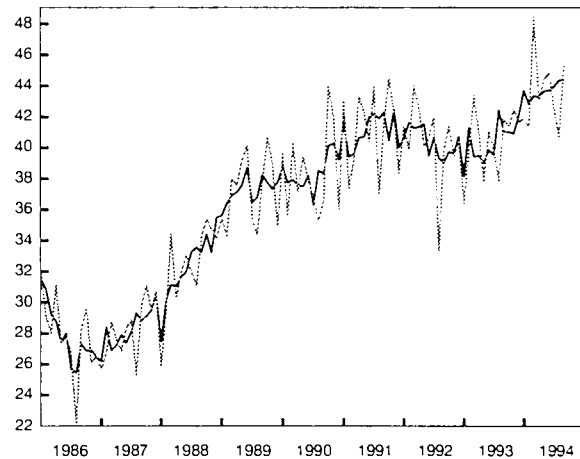

within roughly 2%, and the figure for September was the same as for August. Since the start of the year, the growth rate for imports has nevertheless reached +9.2%.

Thanks to a strong export performance, the European Union's seasonally-adjusted trade balance continued to improve in 1994. There was a surplus in the first nine months of the year (+ECU 4.9 billion), and also in September (+ECU 0.6 billion). After the ECU 5 billion surplus recorded in the second quarter of the year, the evenly balanced results of the third quarter could indicate a disappointing performance in the ensuing months.

GLOBAL TRENDS IN EXTERNAL TRADE

EUROPEAN UNION EXTERNAL TRADE : Results for September 1994.

European Union's exports increased more than imports during the first nine months of 1994 (+2.3 percentage points). In the same period imports of United States and Japan showed a rate of change larger than exports by 3.5 and 2.2 points respectively.

In the third quarter of 1994 the *European Union* recorded a trade surplus of ECU 0.4 billion: as a consequence the cumulated deficit for January-September 1994 fell to ECU 2.6 billion from ECU 9.4 registered a year earlier.

The trade balance recovery is mainly due to the dynamic of the extra-EU exports that increased by 12.2% in the first nine months of 1994 compared to the same period in 1993 while, at the same time, imports went up by 9.9%.

From January to September 1994 the *United States*' trade deficit recorded an ECU 22.2 billion increase compared to the same period in 1993, reaching ECU 108.4 billion (US dollars 127.7 billion).

In ECU terms the imports' rate of change between the first nine months of 1993 and 1994 was larger than that of exports (14% against 10.5%); if measured in US dollars these figures were respectively 13.2% and 9.4%.

In September 1994 *Japan's* trade surplus totalled ECU 7.6 billion which lead the cumulated surplus for the 1994's first nine months to ECU 78.2 billion, compared to ECU 75 billion recorded in the same period of 1993.

This result could be explained mainly by the appreciation of the YEN (9.6% against the ECU in the first three months of 1994). As a matter of fact, if measured in the Japanese currency, the Japanese surplus showed a reduction of YEN 700 billion between these two periods, mainly due to the exports' negative rate of growth (-1.2%) while imports grew by 1.6%.

In ECU terms the rates of change of exports and imports were both positive: respectively 8.4% and 10.7%.

GLOBAL TRENDS IN EXTERNAL TRADE

EXTERNAL TRADE BY MEMBER STATES: Results for September 1994.

In the first three quarters of 1994 among the EU countries Germany and Italy showed the two largest extra-EU surpluses, while the United Kingdom and the Netherlands registered the most important deficits. As for the import and export flows, the most dynamic growth rates were showed by the BLEU and the Ireland.

The extra-EU trade surplus of **Germany** (the largest among the EU countries) soared to ECU 17.6 billion compared to ECU 11.9 billion registered in 1993. In the period January-September 1994 German exports showed a 13% increase compared to the corresponding period of the previous year, while imports grew only by 9.1%.

During the first nine months of 1994 the **Italian** exports increased faster than imports compared to the same period a year earlier, the growth rate being respectively 12.8% and 7%. The Italian trade balance improved its surplus by ECU 3.2 billion, reaching ECU 9.1 billion, from ECU 5.9 billion recorded in 1993.

In the period January-September 1994 the **United Kingdom** was the EU country that experienced the largest trade deficit which reached ECU 15.6 billion. The UK's trade position showed a slight improvement (ECU 0.2 billion) with reference to the same period of 1993 due to the positive gap between the exports' and imports' growth rates (+2.7 points).

The **Netherlands'** extra-EU imports - which include goods entering the Union via Dutch harbours and then delivered to other member states - grew very fast in the first nine months of 1994 (+21.2%) while the exports' rate of change was slightly under the EU average (11.9%). As a consequence in the same period the Dutch extra-EU deficit increased to ECU 14.3 billion compared to 1993's ECU 10.1 billion.

During the period January to September 1994 the **BLEU's** and **Ireland's** extra-EU trade recorded the largest rates of growth among the EU member states compared to the same period a year earlier. Imports of both countries

registered a percentage change larger than exports respectively by 0.7% and 3.1%. In the first three quarters of 1994 the external trade position of the BLEU worsened when compared to the same period in 1993 (the deficit went up to ECU 0.8 billion from ECU 0.5 billion), while Ireland showed in both periods the same ECU 0.7 billion surplus.

France's extra-EU trade surplus improved between the above mentioned period in 1994 and a year earlier (from ECU 5.6 billion in 1993 to ECU 6.5 billion in 1994). Both imports and exports recorded rates of change well under the EU average (6.5% and 7.5% respectively).

In the first nine months of 1994 **Danish** imports recorded a rate of growth larger than exports (15.2% against 13.6%) compared to the same period a year earlier. In the same period Denmark still improved its external surplus reaching ECU 1.8 billion compared to ECU 1.7 billion registered in the corresponding period one year earlier.

Between the periods January-September 1993-1994 **Spain** and **Greece** reduced their trade deficits respectively by ECU 0.3 billion and ECU 0.9 billion. Among the EU countries Greece was the only one which experienced a negative rate of growth of its imports (-16% compared to the previous year) while exports, after the boom experienced in 1993, went up of only 2%. As far as Spain is concerned, these percentage changes were 8.4% and 12.2%.

Between the periods January-September 1993 and 1994 the external balance of **Portugal** remained unchanged (ECU 2 billion deficit): while Portuguese exports percentage change on the correspondent period of the previous year was 9%, the imports went up by only 5.6%.

EUROPEAN UNION EXTERNAL TRADE BY PARTNER COUNTRY

TRADE IN TERMS OF VALUE: Results for September 1994.

In the first nine months of 1994 both the EU trade balances with industrialized countries and with developing countries showed an improvement compared to the same period a year earlier (ECU 7.3 billion and ECU 0.8 billion respectively). At the same time the EU trade positions with CEEC's and with China went down by ECU 0.9 billion and ECU 1.5 billion respectively.

During the period January-September 1994 the EU trade flows with **industrialized countries** recorded an ECU 10.8 billion deficit compared to ECU 18.1 billion showed in the same period of 1993.

Trade with the United States and Canada showed a surplus of ECU 1.9 billion, against a deficit of ECU 1.8 billion recorded a year earlier, while the consistently high deficit with Japan registered an improvement from ECU 19.1 billion to ECU 16.5 billion. The trade deficit with the EFTA countries recorded a slight reduction from ECU 2.4 billion to ECU 2.3 billion.

The trade surplus with **developing countries** went up to ECU 15.3 billion from ECU 14.5 billion between the periods January-September 1993 and 1994. While the EU registered surpluses with the Mediterranean Countries (ECU 8.5 billion), the Asian Newly Industrialized Countries (ECU 5.4 billion) and Latin America (ECU 0.5 billion), the extra-EU trade balance showed a deficit of ECU 2.8 billion with the ACP and of ECU 3.2 billion with the OPEC countries.

In the third quarter of 1994 the EU's trade with the **Central and Eastern European countries** recorded an ECU 1.1 billion deficit which lead the cumulated balance for the first nine months of 1994 to a deficit of ECU 0.2 billion (against an ECU 0.7 billion surplus registered a year earlier).

In the period January-September 1994, the deficit with **China** went up to ECU 7.7 billion from ECU 6.2 billion registered in the same period of 1993.

During the first nine months of 1994 EU **imports** from the industrialized countries showed a 8.3% increase compared to the same period a year earlier. While imports from the United States and Canada and from EFTA recorded an increase above the EU average (10.9% and 10.7% respectively) the EU imports from Japan rose by only 1.3%. Imports from developing countries consolidated the recovery which started in 1994's first quarter: in the period

January-September the EU import growth rate from these countries was 10.2%. The EU import flows from ACP and Latin America countries recorded the most dynamic rates of change (24.5% and 22.3% respectively), while imports from Asian Newly Industrialized (6.5%) and Mediterranean Countries (8.7%) showed less significant performances. EU imports from OPEC countries dropped by 1.1%, reflecting the fall in international oil prices: in the first nine months of 1994 the ECU cost of the EU's crude oil supplies went down by 7.6% (8.4% if measured in US dollars) compared to the same period a year earlier.

The EU imports from Central and Eastern European countries as well as from China continued the fast-growing trend shown in the last two years: the percentage changes in the period January-September against a year earlier were respectively 21.8% and 17.5%.

In the period January-September 1994 **exports** from the EU to the industrialized countries went up by 13.1% compared to the same period of 1993. This result is mainly due to the good performance of EU exports to the United States and Canada (15.6%) and to Japan (19.3%), while exports to EFTA countries registered a rate of growth under the average (11.2%).

The global value of the exports to the developing countries showed a more moderate increase (9.7%): while exports to the Asian NICs, to the Latin American and to the Mediterranean countries recorded positive rates of change (respectively 21.1%, 20.5% and 5.1%), the EU exports to OPEC and ACP countries went down by 8.9% and 12.4% respectively.

The EU export flows to Central and Eastern European countries recorded a percentage change in the first nine months of 1994 well over the EU average (18.1%), while the exports to China, after the boom experienced in 1993, were still growing although at a more moderate rate (13.4%).

EUROPEAN UNION EXTERNAL TRADE BY PRODUCT

TRADE IN TERMS OF VALUE: Results for September 1994.

During the first nine months of 1994 EU trade in machinery and transport equipment recorded the largest surplus (ECU 45.1 billion), while the fuel products showed the most important deficit (ECU 35.9 billion).

In the first three quarters of 1994 the **primary products' (SITC 0-4)** deficit went up to ECU 58.2 billion compared to the ECU 52.5 registered in the corresponding period in 1993.

The EU trade balance in **fuel products (SITC 3)** improved slightly by ECU 0.4 billion, while both deficits in **food, beverages and tobacco (SITC 0+1)** and **raw materials except fuel (SITC 2+4)** showed a deterioration during the first nine months of 1994 respectively of ECU 1.6 billion and ECU 4.5 billion, compared to the same period a year earlier.

As far as the **manufactured products (SITC 5-8)** are concerned, in the first nine months of 1994, EU external trade showed a surplus of ECU 60.4 billion compared to the ECU 49.4 billion registered in the corresponding period a year earlier.

The EU surplus in **machinery and transport equipment (SITC 7)** increased by ECU 8.1 billion, reaching ECU 45.1 billion. The **chemical products (SITC 5)** saw their surplus enhanced to ECU 23.5 billion (compared to ECU 21.4 billion registered one year earlier), while the deficit for **other manufactured goods (SITC 6+8)** went down to ECU 8.2 billion from ECU 9 billion registered in 1993.

As for the **import** flows, the raw materials except fuel (SITC 2+4) were the sections that recorded the highest growth rate (23%), followed by the chemicals (15.9%) and food, beverages and tobacco with 14.2% rate of change. The imports of machinery and transport equipment, and of other manufactured goods showed a more moderate increase: respectively 10.8% and 10.9% compared to the same period a year earlier.

The reduction in the international oil price could explain the negative rate of change (-1.9%) shown by the fuel products in the first nine months of 1994.

On the **export** side, between the first nine months of 1993 and 1994, the manufactured products aggregated by main SITC sections showed very similar rates of change. These rates were +13.3% for the chemical products, +13.6% for the machinery and transport equipment, while the other manufactured goods (SITC 6+8) recorded a 12.6% increase.

In the first three quarters of 1994 the SITC sections grouping the primary products registered relatively weak performances compared to the same period a year earlier: respectively food, beverages and tobacco +8.2%, raw materials other than fuel +12.2% and fuel products -4.7%.
