## **Foreword**

### *1. Introduction*

The monthly bulletin on external trade, published by Eurostat in the B series, Short-term trends, sets out to provide within the shortest possible deadlines data on short-term trends in the European Union's external trade. In particular, it contains data on the European Union's trade flows with its trading partners and the various economic areas and a breakdown of this data by major product group. The bulletin also provides an overview, based on data from various international sources, of the place occupied by the European Union in the external trade of its main trading partners and of third countries. Trade flows between Member States are recorded under the Intrastat system and will be published at a later date.

The European Union's external trade statistics at the most detailed classification level are published monthly on CD-ROM (B series: Intra and extra-EU trade).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External Trade Statistical Yearbook (Series A)*".

External trade statistics are also available on line via the Eurostat data banks (Comext).

The catalogue of Eurostat publications and a detailed methodological description can be found in "*External Trade Statistics User's Guide*" published in all languages of the European Union .

### *2. Sources*

Since 1978, the Member States have transmitted European Union external trade statistics according to a uniform methodology laid down by Council Regulation (EEC) No 1736/75. This regulation was amended to take account of the new developments in 1988, i.e. the introduction of the new external trade classification entitled "Combined Nomenclature" (CN) and the new "Single Administrative Document".

The tables in this bulletin are compiled by Eurostat from the detailed data transmitted on magnetic tape by the Member States; these data are broken down according to the eight-digit subheadings of the Combined Nomenclature.

Eurostat wishes to take this opportunity of thanking the relevant departments in the Member States for their cooperation, which enables it to compile these harmonized European Union statistics and to ensure their quality.

### *3. Coverage*

The results of the European Union statistics relate to special trade. This comprises:

- 1) imports of goods placed in free circulation on their arrival at or on leaving warehouses, imports for inward processing and imports after outward processing (customs procedures);
- 2) exports of European Union goods, exports after inward processing and exports for outward processing (customs procedures).

Transit and warehousing traffic are not covered by European Union statistics.

### *4. Statistical territory*

The statistical territory of the European Union comprises the customs territory of the European Union excluding the French overseas departments. Thus Greenland, the Canary Islands and Ceuta and Melilla are not covered, while the Azores and Madeira for Portugal and the Balearics for Spain are.

From October 1990, the external trade data of the Federal Republic of Germany, the other Member States and EUR 12 relate to the Federal Republic of Germany in its borders after 3 October 1990.

## *5. Goods classification*

In this publication the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of correspondence tables drawn up by Eurostat on the basis of the Combined Nomenclature (CN).

## *6. Trading partners: countries and economic areas*

The results of the European Union are broken down by country of origin, country of consignment and country of destination in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomenclature (Geonom).

When goods that originate in third countries and are not in free circulation in the European Union are imported, EU statistics state the country of origin. When such goods are exported, the country of destination is specified.

## *7. Units*

### *Values*

The statistical value of goods on import is equal to the customs valuation or to a value determined by reference to the concept of customs valuation (in the case, for example, of imports from other Member States). It is the CIF value (cost, insurance, and freight).

The statistical value of goods on export is equal to their value at the place and time at which they leave the statistical territory of the exporting Member State. It is the FOB value (free on board).

The value is expressed in European units of account (ecus). The ecu is a "basket" currency unit based on the market exchange rates of a certain quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The bulletin contains a table showing the conversion rates used.

### *Quantity*

The statistics give the net weight of the goods.

## *8. Confidentiality*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The relevant legislation, the procedures for implementing it and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data; it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only or to exports only and to only some of the variables recorded (value, statistical procedure, quantities, country, partner, etc.).

Measures are taken during collection and during processing by Eurostat to minimise the effect of these headings on the results for the European Union as a whole; in particular, trade data on these headings are included at higher levels of aggregation and in the totals.

On the other hand, the statistics are supplied on the strength of customs documents and do not take account of any amendments made by some Member States at the end of the year in drawing up accounts on intergovernmental trade. In view of this, drawing up a trade balance may produce figures that vary sometimes considerably from the official national figures.

## **9. Corrections**

Every month the Member States send Eurostat a magnetic tape containing the results for the current month.

In order to correct these results, the Member States also send every month a magnetic tape containing monthly corrections covering the previous 24-month period.

The following table gives the breakdown of the corrections sent by the Member States to Eurostat. It shows the number of observations corrected and the percentage of the total number of observations sent by the Member States.

## **Indices**

### *1. Introduction*

Changes over time in the value of trade are influenced by variations in prices and the quantities marketed. Indices are used to measure these two effects. In general, a system of indices is chosen so that the product of the volume index and the price index expresses the value index. Several systems of indices meeting this requirement may be regularly used. The results obtained by using one system will generally be different from those obtained by using another. For various reasons the Member States do not use a common system, and the level of breakdown of their indices by product group and by partner area also varies. Eurostat has therefore devised its own external trade indices which enable it to calculate, for each Member State, European Union indices on a strictly comparable basis. These indices may be consulted on the Trend database developed by Eurostat.

### *2. Sources of data*

There are basically two ways of obtaining information on prices: conducting price surveys by directly approaching importers and exporters and using data collected by the customs authorities. At present only customs data are available in all the Member States. Eurostat therefore calculates indices of unit values (values divided by quantities) and uses them as price variation indicators. The computing programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

### *3. Extreme values*

To avoid a number of restrictions involved in using customs data, Eurostat decided to adopt two basic principles in calculating unit value indices: using the most detailed data possible and always bearing in mind that the object of the exercise is to break down variations in value into a "price" component and a "volume" component. Two rules are applied in order to exclude unlikely price movements. The first is that, given the general level of inflation, the price of a product should not be very different from its level a year ago. Any variation of five or more points is regarded as suspect. The second – more restrictive – rule is that the variation in the price of a product in relation to the most recent month for which data are available should not be very different from the average price variation for similar products. Applying these rules prevents extreme variations due to factors that are unconnected with prices and would otherwise distort the unit value index. For products whose unit values are rejected, the variations are taken to be the same as those for similar products.

### *4. Classification used*

The United Nations Standard International Trade Classification (SITC), revised for the third time in 1988, was drawn up on the basis of the Harmonized Commodity Description and Coding System (HS). Using tables of correspondence between the various classifications (Nimexe, Combined Nomenclature and SITC), Eurostat has been able to publish an uninterrupted time series of external trade indices from 1979 to the present.

From 1994 onwards, external trade publications will give indices calculated from 1989 on the basis of the following SITC Rev. 3 aggregates:

- TOTAL: all commodities;
- 0+1: foods, beverages and tobacco;
- 2+4: crude materials, except fuels;
- 3: fuels
- 5+6+7+8: manufactured goods.

By compiling other correspondence tables, Eurostat is able to supply complete time series based on other classifications.

## *5. Types of indices and rebasing*

Eurostat calculates Fisher's "ideal" annual chain indices. Since the "basket of goods" marketed at international level varies rapidly over time, the annual chain permits the updating of the index weightings. Each month the changes in unit values in the product groups at detailed level are weighted in order to obtain the changes in unit values in the various major product categories. Since these changes are based on the previous year, a chain of unit values is obtained. The corresponding volume index chain is the ratio of the unit value variation to the variation in value for the month in question compared with the monthly average for the previous year. The indices published each month are calculated by multiplying the above-mentioned chains by the annual indices for the previous year, a fixed reference period having been chosen (at present 1990). The annual unit value chains are obtained by weighting the monthly chains by the volumes, while the annual volume chains are calculated by dividing the annual value variations by the unit value chains.

## *6. General comments*

- Only data on normal trade (statistical procedure 1) are used to calculate the unit value indices; however, data on total trade (covering all the statistical procedures) are used to calculate the value indices from which the volume indices are obtained.
- The unit value indices are calculated on the basis of values expressed in ecus.
- For any further information on the methods used to calculate the indices, please refer to Eurostat's specialised publications.

## **Trends in European Union trade**

## SEASONAL ADJUSTMENTS: RESULTS

Because of an absence of results for Austria and Sweden, the results in this month's bulletin are the same as the ones dealt with in the previous issue.

The slowdown in the growth of the European Union's exports to the rest of the world, adjusted for seasonal factors, was more pronounced in the second half of 1994. Although growth for the year as a whole was strong (+10.6%), it declined steadily as the year progressed, from 17.1% in the first quarter, to 13.9% in the second, 9% in the third and 4.4% in the final quarter. Following the decline recorded in September–October, exports resumed their growth at the end of the year, rising by +1.9% between October and November and +1.7% between November and December.

By contrast, the EU's imports from the rest of the world, adjusted for seasonal factors, grew at a fairly stable rate throughout 1994 (+10.5%). The increase observed in the second half (+10.7%) was nearly four points higher than that of exports (+6.8%). The strong growth recorded in November (+1.7%) and, more especially, in December (+6.2%) accentuated the rebound in imports observed since mid-1993.

The EU's trade balance, adjusted for seasonal factors, was close to equilibrium (ECU -0.1 billion) for 1994 as a whole. A series of negative monthly results in the second half of the year, culminating in a deficit of ECU -2.4 billion in December, meant that there was no surplus for the year as a whole.

(1) Seasonal Adjustment via X11/ARIMA procedure.

## GLOBAL TRENDS IN EXTERNAL TRADE

### EUROPEAN UNION EXTERNAL TRADE : Results for 1994.

The European Union's imports increased by slightly more than exports during 1994 (+0.7 percentage points). In the same period, imports of United States and Japan showed a higher rate of change than exports by 3.7 and 3.9 points respectively.

In 1994, the **European Union's(\*)** trade balance went down to a deficit of ECU 3.5 billion compared to 1993 when the imports and the exports flows were almost in equilibrium (only a small ECU 0.1 billion deficit).

This performance is the result of a clear upturn in extra-EU imports (10.9% growth rate against the stagnation registered in 1993), together with the 0.5 percentage point reduction in the exports annual growth rate (11.2% compared to 11.7% in 1993).

From January to December 1994, the **United States'** trade deficit recorded an ECU 29.2 billion increase compared to the corresponding period a year earlier, and it reached ECU 148.1 billion (US dollars 177.2 billion).

In ECU terms, the 1994 imports' rate of change over 1993 was larger than the exports' one (12.3% against 8.6%); if measured in US dollars, these figures were 14.2% and 10.2% respectively.

In 1994, the **Japanese** trade surplus remained fairly stable compared to a year earlier, totalling ECU 102.1 billion (ECU 0.3 billion increase over 1993).

In ECU terms the exports' and imports' rates of change were both largely positive: 8.3% and 12.2% respectively; while, if measured in the Japanese currency - due to the YEN 7.3% appreciation against the ECU in 1994 - the value of Japanese exports and imports stabilised at the same level of 1993.

(\*) Due to frequent revisions of the monthly figures sent by the member states, the data shown is not necessarily identical to that presented in the previous publications.

1 billion =  $10^9$

## GLOBAL TRENDS IN EXTERNAL TRADE

### EXTERNAL TRADE BY MEMBER STATES: Results for 1994.

**Germany** and **Italy** showed the two largest extra-EU surpluses among the EU countries, while the **Netherlands** and the **United Kingdom** registered the highest external deficits.

In 1994, **Germany** registered both the largest extra-EU surplus among the EU member states (ECU 25.6 billion) and the most important improvement compared to the previous year (ECU 5.6 billion). German exports showed a 11.9% increase over 1993, while imports grew by 9.7%.

During 1994 the **Italian** exports increased faster than imports compared to the same period a year earlier, the growth rates being 10.6% and 9.7% respectively. The Italian trade balance improved its surplus by ECU 1.7 billion, reaching ECU 12.7 billion, from ECU 11 billion recorded in 1993.

The Dutch extra-EU deficit recorded the most important deterioration between 1993 and 1994 (ECU 9.9 billion) and became the largest among the EU countries (ECU 22 billion).

As a matter of fact, the **Netherlands'** extra-EU imports - which include goods entering the Union via Dutch harbours and than delivered to other member states - grew very fast in 1994 (30.3%), while the exports' rate of change was slightly under the EU average (9.6%).

In 1994, the **United Kingdom** was the EU country that experienced the second largest trade deficit, totalling ECU 20.5 billion.

The UK's trade position showed an ECU 2.1 billion deterioration with reference to the previous year as a result of the gap between the imports' and exports' growth rates (0.9 percentage points).

**France**'s extra-EU trade surplus decreased by ECU 0.6 billion in 1994 compared to a year earlier (from ECU 9.4 billion to ECU 8.8 billion). The rates of change of both imports and exports were over the EU average: 14.6% and 12.0% respectively.

During 1994, the extra-EU exports of the **BLEU** and **Greece** recorded two of the largest percentage changes among the EU member states compared to the previous year (17.8% and 14.3% respectively). On the imports side, while the BLEU registered a rate of growth close to the EU average (10.8%), Greece was the only member state which experienced a reduction in the extra-EU purchases (-14%).

In consequence, both countries improved their external trade accounts: the Greek trade deficit went down to ECU 2.8 billion from the ECU 4.3 billion registered in 1993, and the BLEU's trade balance reduced its deficit by ECU 1.7 billion.

The external trade surpluses of **Denmark** and **Ireland** reduced slightly compared to 1993: to ECU 2.5 billion and ECU 0.8 billion respectively in 1994.

The trade flows of both countries registered dynamic performances: Danish imports and exports respectively grew by 16.7% and 13.4% over 1993, while the corresponding rates for Ireland were 23% and 14.4%.

The external positions of **Spain** and **Portugal** were almost stable between 1993 and 1994: their extra-EU deficits registered in 1994 ECU 4.7 billion and ECU 2.9 billion respectively.

## EUROPEAN UNION EXTERNAL TRADE BY PARTNER COUNTRY

### TRADE IN TERMS OF VALUE: Results for 1994.

In 1994, the EU trade deficit with industrialised countries showed an improvement compared to the previous year of ECU 2.9 billion. At the same time, the EU trade positions with developing countries, CEEC's and China worsened by ECU 1.1 billion, ECU 3 billion and ECU 2.2 billion respectively.

The EU trade flows with **industrialised countries**, which accounted for more than a half of the total extra-EU trade in 1994, recorded an ECU 15.6 billion deficit compared to ECU 18.5 billion shown in 1993. While the deficit with Japan dropped by ECU 2.7 billion, the trade balance with the EFTA countries went down from ECU 2.7 billion to ECU 4.3 billion deficit. The trade balance with the United States and Canada, countries that in 1994 represented almost 20% of the total EU external flows, stabilised at ECU 2.1 billion surplus.

The trade surplus with **developing countries** reduced slightly to ECU 23.3 billion from ECU 24.4 billion registered in 1993.

The big increase of the surplus with the Asian NIC's (ECU 3.8 billion) wasn't sufficient to compensate for the deterioration of the trade positions with the other areas: the surpluses with the Mediterranean Countries and with Latin America reduced by ECU 2 billion and ECU 0.4 billion respectively, and the trade balances with the OPEC and the ACP countries, went down to almost the same deficit (ECU 3.6 billion and ECU 3.7 billion respectively).

In 1994, the EU's trade with the **Central and Eastern European countries** was almost in balance (showing a small ECU 0.3 billion deficit). This result represented a deterioration compared to 1993, when the balance recorded an ECU 2.7 billion surplus.

In the year 1994, the deficit with **China** as well went up to ECU 10.5 billion from ECU 8.3 billion registered in 1993.

During 1994 EU **imports** from the industrialised countries increased by 9.4% over the previous year. While imports from the United States-Canada and from EFTA recorded an increase above the EU average (10.9% and 12.6% respectively) the EU imports from

Japan (9% of the total extra-EU imports) rose by only 2.4%.

The value of EU imports from developing countries (30% of the total 1994 extra-Union purchases) increased by 10.8% between 1993 and 1994. Imports from ACP and Latin America countries recorded the most dynamic rates of change (both around 24%), while the flows from Asian Newly Industrialised and Mediterranean countries showed lower performances (8.2% and 8.6% respectively). EU imports from OPEC countries were almost stable at the same level registered in 1993 (-1.2% percent change).

The EU imports from Central and Eastern European countries as well as from China continued the fast-growing trend shown in the previous two years: the growth rates in 1994 over a year earlier were 25% and 17.2% respectively.

In the year 1994, **exports** from the EU to the industrialised countries went up by 11.2% compared to 1993. This result is mainly due to the good performance of EU exports to Japan (16.8% annual growth), while sales in the EFTA and US-Canadian markets registered a rate of growth closer to the average (11.3% and 11.6% respectively).

The global value of the exports to the developing countries, which represented in 1994 the 34% of the total extra-EU exports, showed an increase below the average (8.6%): while exports to the Asian NICs and to the Latin American countries showed dramatic rates of growth (18.5% and 20.3% respectively), the EU exports to the Mediterranean countries grew only by 2.6% and the sales to OPEC and ACP countries went down by 9.2% and 9.7% respectively.

The EU export flows to Central and Eastern European countries recorded a percentage change in 1994 well above the EU average (16.3%), while the exports to China, after the boom experienced in 1993, were still growing but at a more moderate rate (10.2%).

## EUROPEAN UNION EXTERNAL TRADE BY PRODUCT

### TRADE IN TERMS OF VALUE: Results for 1994.

During 1994, EU trade balance in machinery and transport equipment recorded the most important surplus (ECU 62.2 billion), while the fuel products showed the largest deficit totalling ECU 49.6 billion.

In 1994, the **primary products' (SITC 0-4)** deficit went up to ECU 80.6 billion compared to the ECU 70.5 registered in 1993.

The EU trade deficit in **fuel products (SITC 3)** grew slightly by ECU 0.6 billion, while the balances for **food, beverages and tobacco (SITC 0+1)** and **raw materials except fuel (SITC 2+4)** showed a more evident deterioration during 1994 compared to the a year earlier, of ECU 3.1 billion and ECU 6.4 billion respectively.

As far as the **manufactured products (SITC 5-8)** are concerned, EU external trade showed a surplus of ECU 85.3 billion compared to the ECU 78.1 billion registered in 1993.

The EU surplus in **machinery and transport equipment (SITC 7)** increased by ECU 5.6 billion, reaching ECU 64.1 billion. The **chemical products (SITC 5)** also saw their surplus enhanced to ECU 31 billion (compared to ECU 29.1 billion registered one year earlier), while the deficit for **other manufactured goods (SITC 6+8)** went up to ECU 10 billion from ECU 7.6 billion registered in 1993.

As for the **import** flows, the primary products covered in 1994 almost 27% of the total extra-EU purchases. Among them, the raw materials except fuel (SITC 2+4) were the sections that recorded the most dynamic performance between the periods January-December 1993 and 1994 (+25%). Food, beverages and tobacco

(SITC 0+1) registered a rate of growth of 14.2%; while, following the general reduction in international oil prices, the EU imports of fuel products' (SITC 3) dropped by 1,5%. As a matter of fact, in 1994, the ECU cost of the EU's crude oil supplies went down by 4.9% (3.5% if measured in US dollar) compared to the previous year. In 1994, chemical products (SITC 5) recorded a dynamic 17.4% growth rate; while imports of machinery and transport equipment (SITC 7), and of other manufactured goods (SITC 6+8) showed 14.7 and 12.3 percent change respectively compared to the previous year.

In 1994, the manufactured products represented 86% of the total extra-EU exports.

Between January-December 1993 and 1994, all the SITC section grouping processed products showed rates of change above the average.

These rates were +12.4% for the chemical products (SITC 5), +13.4% for the machinery and transport equipment (SITC 7), while the other manufactured goods (SITC 6+8) recorded a 11.3% increase over the previous year.

As far as the primary products are concerned, in the same period, the exports of raw materials other than fuel (SITC 2+4) went up by 14.6%, while food, beverages and tobacco (SITC 0+1) and fuel products (SITC 3) registered relatively weak performances: respectively +5.8% and -10.4% growth rate.

(1) The ECU is a 'basket' monetary unit based on the market exchange rates of certain quantity of each European Union currency weighted on the basis of the average gross national product over five years and of the intra-EU trade of each Member State. The rates used here are averages of the daily rates.

## **List of products : SITC, rev. 3**

**0 Food and live animals**

- 00 Live animals other than animals of division 03
- 01 Meat and meat preparations
- 02 Dairy products and birds' eggs
- 03 Fish (not marine mammals), crustaceans, molluscs and aquatic invertebrates and preparations thereof
- 04 Cereals and cereal preparations
- 05 Vegetables and fruit
- 06 Sugars, sugar preparations and honey
- 07 Coffee, tea, cocoa, spices, and manufactures thereof
- 08 Feeding stuff for animals (not including unmilled cereals)
- 09 Miscellaneous edible products and preparations

**1 Beverages and tobacco**

- 11 Beverages
- 12 Tobacco and tobacco manufactures

**2 Crude materials, inedible, except fuels**

- 21 Hides, skins and fur skins, raw
- 22 Oil seeds and oleaginous fruits
- 23 Crude rubber (including synthetic and reclaimed)
- 24 Cork and wood
- 25 Pulp and waste paper
- 26 Textile fibres (other than wool tops and other combed wool), and their wastes (not manufactured into yarn or fabric)
- 27 Crude fertilizers, other than those of division 56, and crude minerals (excluding coal, petroleum and precious stones)
- 28 Metalliferous ores and metal scrap
- 29 Crude animal and vegetable materials, n.e.s.

**3 Mineral fuels, lubricants and related materials**

- 32 Coal, coke and briquettes
- 33 Petroleum, petroleum products and related materials
- 34 Gas, natural and manufactured
- 35 Electric current

**4 Animal and vegetable oils, fats and waxes**

- 41 Animal oils and fats
- 42 Fixed vegetable fats and oils, crude, refined or fractionated
- 43 Animal or vegetable fats and oils, processed; waxes of animal or vegetable origin; inedible mixtures or preparations of animal or vegetable fats and oils, n.e.s

**5 Chemicals and related products, n.e.s**

- 51 Organic chemicals
- 52 Inorganic chemicals
- 53 Dyeing, tanning and colouring materials
- 54 Medical and pharmaceutical products
- 55 Essential oils and resinoids and perfume materials; toilet, polishing and cleaning preparations
- 56 Fertilizers (other than those of group 272)
- 57 Plastics in primary forms
- 58 Plastics in non-primary forms
- 59 Chemical materials and products, n.e.s

**6 Manufactured goods classified chiefly by material**

- 60 Complete industrial plant appropriate to section 6
- 61 Leather, leather manufacture, n.e.s., and dressed fur skins
- 62 Rubber manufacture, n.e.s
- 63 Cork and wood manufacture (excluding furniture)
- 64 Paper, paperboard and articles of paper pulp, of paper or of paperboard
- 65 Textile yarn, fabrics, made-up articles, n.e.s., and related products
- 66 Non-metallic mineral manufactures, n.e.s
- 67 Iron and steel
- 68 Non-ferrous metals
- 69 Manufacture of metals, n.e.s

**7 Machinery and transport equipment**

- 70 Complete industrial plant appropriate to section 7
- 71 Power-generating machinery and equipment
- 72 Machinery specialized for particular industries
- 73 Metal working machinery
- 74 General industrial machinery and equipment, n.e.s., and machine parts, n.e.s
- 75 Office machines and automatic data-processing machines
- 76 Telecommunications and sound recording and reproducing apparatus and equipment
- 77 Electrical machinery, apparatus and appliances, n.e.s and electrical parts thereof (including non-electrical counterparts n.e.s. of electrical household type equipment)
- 78 Road vehicles (including air-cushion vehicles)
- 79 Other transport equipment

## **8 Miscellaneous manufactured articles**

- 80 Complete industrial plant appropriate to section 8
- 81 Prefabricated buildings; sanitary plumbing, heating and lighting fixtures and fittings, n.e.s
- 82 Furniture and parts thereof; bedding, mattresses, mattress supports, cushions and similar stuffed furnishings
- 83 Travel goods, handbags and similar containers
- 84 Articles of apparel and clothing accessories
- 85 Footwear
- 87 Professional, scientific and controlling instruments and apparatus, n.e.s

- 88 Photographic apparatus, equipment and supplies and optical goods, n.e.s; watches and clocks
- 89 Miscellaneous manufactured articles, n.e.s

## **9 Commodities and transactions not classified elsewhere in SITC**

- 91 Postal packages not classified according to kind
- 93 Special transactions and commodities not classified according to kind
- 94 Complete industrial plant, not elsewhere specified
- 96 Coin (other than gold coin) not being legal tender
- 97 Gold, non-monetary (excluding gold, ores and concentrates)
