

GEOGRAPHICAL BREAKDOWN OF THE CURRENT ACCOUNT

EUR 12 FROM 1982 TO 1991

Eurostat hat die Aufgabe, den Informationsbedarf der Kommission und aller am Aufbau des Binnenmarktes Beteiligten mit Hilfe des europäischen statistischen Systems zu decken.

Um der Öffentlichkeit die große Menge an verfügbaren Daten zugänglich zu machen und Benutzern die Orientierung zu erleichtern, werden zwei Arten von Publikationen angeboten: Statistische Dokumente und Veröffentlichungen.

Statistische Dokumente sind für den Fachmann konzipiert und enthalten das ausführliche Datenmaterial: Bezugsdaten, bei denen die Konzepte allgemeinbekannt, standardisiert und wissenschaftlich fundiert sind. Diese Daten werden in einer sehr tiefen Gliederung dargeboten. Die Statistischen Dokumente wenden sich an Fachleute, die in der Lage sind, selbständig die benötigten Daten aus der Fülle des dargebotenen Materials auszuwählen. Diese Daten sind in gedruckter Form und/oder auf Diskette, Magnetband, CD-ROM verfügbar. Statistische Dokumente unterscheiden sich auch optisch von anderen Veröffentlichungen durch den mit einer stilisierten Graphik versehenen weißen Einband.

Die zweite Publikationsart, die Veröffentlichungen, wenden sich an eine ganz bestimmte Zielgruppe, wie zum Beispiel an den Bildungsbereich oder an Entscheidungsträger in Politik und Verwaltung. Sie enthalten ausgewählte und auf die Bedürfnisse einer Zielgruppe abgestellte und kommentierte Informationen. Eurostat übernimmt hier also eine Art Beraterrolle.

Für einen breiteren Benutzerkreis gibt Eurostat Jahrbücher und periodische Veröffentlichungen heraus. Diese enthalten statistische Ergebnisse für eine erste Analyse sowie Hinweise auf weiteres Datenmaterial für vertiefende Untersuchungen. Diese Veröffentlichungen werden in gedruckter Form und in Datenbanken angeboten, die in Menütechnik zugänglich sind.

Um Benutzern die Datensuche zu erleichtern, hat Eurostat Themenkreise, d. h. eine Untergliederung nach Sachgebieten, eingeführt. Daneben sind sowohl die Statistischen Dokumente als auch die Veröffentlichungen in bestimmte Reihen, wie zum Beispiel „Jahrbücher“, „Konjunktur“, „Methoden“, untergliedert, um den Zugriff auf die statistischen Informationen zu erleichtern.

Y. Franchet
Generaldirektor

It is Eurostat's responsibility to use the European statistical system to meet the requirements of the Commission and all parties involved in the development of the single market.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of this information, Eurostat has set up two main categories of document: statistical documents and publications.

The statistical document is aimed at specialists and provides the most complete sets of data: reference data where the methodology is well established, standardized, uniform and scientific. These data are presented in great detail. The statistical document is intended for experts who are capable of using their own means to seek out what they require. The information is provided on paper and/or on diskette, magnetic tape, CD-ROM. The white cover sheet bears a stylized motif which distinguishes the statistical document from other publications.

The publications proper tend to be compiled for a well-defined and targeted public, such as educational circles or political and administrative decision-makers. The information in these documents is selected, sorted and annotated to suit the target public. In this instance, therefore, Eurostat works in an advisory capacity.

Where the readership is wider and less well defined, Eurostat provides the information required for an initial analysis, such as yearbooks and periodicals which contain data permitting more in-depth studies. These publications are available on paper or in Videotext databases.

To help the user focus his research, Eurostat has created 'themes' i.e. a subject classification. The statistical documents and publications are listed by series, e.g. yearbooks, short-term trends or methodology, in order to facilitate access to the statistical data.

Y. Franchet
Director-General

Pour établir, évaluer ou apprécier les différentes politiques communautaires, la Commission des Communautés européennes a besoin d'informations.

Eurostat a pour mission, à travers le système statistique européen, de répondre aux besoins de la Commission et de l'ensemble des personnes impliquées dans le développement du marché unique.

Pour mettre à la disposition de tous l'importante quantité de données accessibles et faire en sorte que chacun puisse s'orienter correctement dans cet ensemble, deux grandes catégories de documents ont été créées: les documents statistiques et les publications.

Le document statistique s'adresse aux spécialistes. Il fournit les données les plus complètes: données de référence où la méthodologie est bien connue, standardisée, normalisée et scientifique. Ces données sont présentées à un niveau très détaillé. Le document statistique est destiné aux experts capables de rechercher, par leurs propres moyens, les données requises. Les informations sont alors disponibles sur papier et/ou sur disquette, bande magnétique, CD-ROM. La couverture blanche ornée d'un graphisme stylisé démarque le document statistique des autres publications.

Les publications proprement dites peuvent, elles, être réalisées pour un public bien déterminé, ciblé, par exemple l'enseignement ou les décideurs politiques ou administratifs. Des informations sélectionnées, triées et commentées en fonction de ce public lui sont apportées. Eurostat joue, dès lors, le rôle de conseiller.

Dans le cas d'un public plus large, moins défini, Eurostat procure des éléments nécessaires à une première analyse, les annuaires et les périodiques, dans lesquels figurent les renseignements adéquats pour approfondir l'étude. Ces publications sont présentées sur papier ou dans des banques de données de type vidéotex.

Pour aider l'utilisateur à s'orienter dans ses recherches, Eurostat a créé les thèmes, c'est-à-dire une classification par sujet. Les documents statistiques et les publications sont répertoriés par série — par exemple, annuaire, conjoncture, méthodologie — afin de faciliter l'accès aux informations statistiques.

NOTICE

I. INTRODUCTION

ECONOMIC AND MONETARY UNION, international negotiations such as the URUGUAY ROUND and the many bilateral contacts between the EC and the other partner countries make it necessary to provide a geographical breakdown of current trade. In addition, national economies in general and the Community economy vis-à-vis the rest of the world in particular, are more interdependent than in the past; this leads to greater and greater synchronization of the resulting economic cycles. These factors also make it necessary to have statistics in ever greater detail.

The fact that certain Member States of the Community have sent revised data at a greater level of detail has made it possible to improve the quality and extend the scope of the statistical information given in this second publication on the geographical breakdown of current Community trade.

The publication is in three parts:

- A geographical breakdown of Community trade for each major item of the current balance.
- A geographical breakdown of current trade of the EC, its Member States, the European Institutions, the USA and Japan with the major economic zones and some individual countries (the levels of detail being different depending on the declaring country).
- A geographical breakdown of the "total current balance" in the Community for all its partner countries and hence at a far greater level of detail than in the first two parts. This part did not appear in the first publication. It has been made possible thanks to the introduction and analysis of a specific questionnaire on the subject sent to each Member State. The response rate was very satisfactory, but the lack of information for some Member States made it difficult to estimate the Community aggregate. This is the reason why the most significant partner countries in terms of current trade during the period under study was limited to one hundred (see methodology).

II. THE CURRENT BALANCE

The balance of payments records, for a given period and country, all the transactions which have taken place between residents and non-residents.

Each transaction is recorded under the double balance system, i.e., an identical amount appears with opposing signs.

The balance of payments may be subdivided into two parts:

- the balance on current account;
- the balance on capital account (which records changes in claims and liabilities vis-à-vis the rest of the world).

The concept of a current account balance as presented in this study is in accordance with the IMF recommendations given in the "Balance of Payments Manual" (IMF, 4th edition, 1977). In accordance with the EUROSTAT scheme, this balance mainly comprises:

Merchandise: the value of goods as they cross the frontier of a country.

Services: transactions relating to transport, tourism and other services of any kind.

Investment income, also called "capital income": interest and dividends on direct and portfolio investment as well as interest on loans. In this publication, reinvested profits are not included.

Labour income: mainly the remuneration of frontier and seasonal workers.

Government transactions: transactions relating to official bodies abroad (embassies, consulates, military establishments, etc.) and joint organizations such as NATO.

Unilateral transfers: these are unrequited transfers, comprising transfers of private funds (from immigrant workers to their country of origin, from migrants to their country of destination) and official transfers (contributions to international organizations, official development aid, payments of pensions to non-residents, etc.).

III. CALCULATING THE COMMUNITY BALANCE

The current balance accounts given in this document are EUROSTAT's estimates made on the basis of the balances published by the Member States.

These balances have been corrected to ensure harmonization and certain missing data have been estimated (see methodology).

The estimates for the current EUR12 balance account correspond to the sum of the estimates for the 11 current account balances of the 12 Member States (Belgium and Luxembourg produce a joint balance), to which is added the balance of the Community Institutions.

The current transactions of the Member States are broken down geographically between intra-EUR12 and extra-EUR12. The latter component is then broken down by countries and geographic or economic zones. Allocating the transactions to the appropriate partner is done according to the criterion of residence of that partner.

To analyze the Community's trade with the rest of the world, all intra-Community flows must be deducted and only extra-Community flows taken into account.

IV. GEOGRAPHICAL BREAKDOWN

Calculating the geographical breakdown of the current Community balance presents several problems of coverage and quality. Precise information on the residence of partners is not always available. The

criteria for identifying the partner for certain current transactions may sometimes be insufficient (breakdown of flows in line with the currency used for settlement, for example).

That part of the current balance which poses most difficulty is that of the "invisibles" (all the services, income from labour, income from investment, government transactions and unilateral transfers). The multiplicity and complexity of a major part of these flows make the statistical apparatus less reliable to record and assess them properly. This is perfectly illustrated by "investment income" as the increasing complexity of transnational financial dealings makes it very difficult to assess.

On the other hand, trade in goods can be illustrated much more reliably, thanks to the availability of quite detailed customs records which facilitate assessment of the trade and determination of the partners.

V. CONCLUSION

The problems of statistical coverage cited above, the inadequacy of data, or sometimes the absence of data consistency all affect the quality of the estimates made, despite the fact that these appear to be in conformity with the main trends of the macro-economic phenomena observed in the ten-year period 1982-1991.

It is thus better to pay better attention to structures than to amounts, to trends rather than to absolute values, and to cover ratios rather than balances (the value of balances by partner country is not very meaningful).

Note "Asymmetries" :

The balance between the European Community and intra-EUR12 should be nihil. The amounts corresponding to net represent intra-Community asymmetries.

Note "Items" :

The item "Not allocated services" exists only in the French current balance. The corresponding amounts for EUR12 are therefore the same as for France.

Note "Partner countries" :

The breakdown of the Community Current Account by partner country (page 169) is reliable only for the year 1991. The estimations from 1987 to 1990 have been included for reference only.

METHODOLOGY

I. GENERAL METHODOLOGICAL APPROACH

A. HARMONIZATION

Most of the corrections affecting methodology made by the Member States appeared in the study "International trade in services - EUR12 from 1982 to 1991", where they are given with rather more detail. The only ones included here are those with an effect on the assessment of the extra-Community flows which must be broken down.

B. BREAKDOWN BY PARTNER ZONES

On this subject, the Member States provided somewhat dissimilar information with respect to both quantity and quality. In particular, certain problems of consistency appeared in the extra-Community current flows declared by certain Member States at different periods for different EUROSTAT questionnaires. EUROSTAT has, in fact, replies to two different questionnaires on the geographical breakdown of the current balance: the first gives details by items for aggregated geographical zones and a few individual countries; the second gives details per country, but covers one single item only: the total current balance. The replies to these two questionnaires are not always completely consistent.

The overall rule which was observed in the entire study was thus to preserve consistency with the EUROSTAT estimates of extra-Community flows which were published in the study "International trade in services - EUR12 from 1982 to 1991". These data provided the base for the extrapolation of missing series and allowed existing series to be revised.

In addition, certain missing partner zones have been reconstituted, either from details provided in the questionnaire for the country making up these zones or from the complementary questionnaire.

The whole set of raw data obtained from the Member States is nevertheless generally sufficient to arrive at correct estimates. As certain countries provided no or little breakdown by partner zones, the estimates were restricted to a division between intra and extra Community flows. This is the case with Ireland, Denmark and Greece. This is also the only breakdown effected for the data on trade with the USA and Japan.

C. BREAKDOWN OF THE TOTAL COMMUNITY CURRENT ACCOUNT BY COUNTRY

We used the following procedures to break down the EUR12 total by partner countries:

All the operations for estimating missing data and for correcting inconsistent data have been done for each constituent element (each of the Member States and the European Institutions), resulting in an EUR12 aggregate as the simple sum of its component parts.

A consistency check with the rest of the study has been carried out and the EUR12 amounts have been revised for the following partners: USA, Japan, Turkey, Canada, Australia and New Zealand, which appeared on both the EUROSTAT questionnaires.

The data for six Member States (Germany, France, BLEU, Netherlands, Spain and Portugal) enabled a reference structure to be constituted which served as a basis for estimating the missing partner countries when series were not available in full. The missing years have been extrapolated from known years (complete series or a series completed by the method referred to above).

We made an initial selection of 128 partner countries for which we had sufficient information (with the exception of all the overseas territories and countries with very small current accounts). Afghanistan, North Yemen, South Yemen and Andorra have not been included because of insufficient information or apparent inconsistency with the data from the Member States.

We then carried out a second selection of the "most significant" 100 partners after estimating and correcting data for the Member States and the European Institutions. The criterion for this selection was the scale of trade between the Community and each of the former 128 countries during the period 1982-1991 (the scale being measured by the credits plus the amount of debits). The heading "no breakdown" corresponds to all the current flows for the non-selected countries, but also contains the amounts which the Member States were not able to break down as the partner countries concerned were not determined.

Only the estimates for 1987-1991 are given in this publication, since this corresponds to the period which is best covered by Member States data and hence presents more reliability as it is little affected by extrapolations.

II. DETAILS OF TRANSACTIONS FOR EACH DECLARING COUNTRY

A. BLEU

The Banque de Belgique sent revisions for the period 1987-1991. The proportion of items with no breakdown is much lower than for the data which were previously supplied for 1982-1990. These new data served as the basis for distributing the items with no geographical breakdown "merchandise", "transport", "investment income" and "other services". For these items, flows for which no geographical breakdown was given have been reallocated for 1987-1991 in line with the known geographical breakdown between them as well as the extra-Community breakdown. From 1982-1986, the flows without breakdown are greater and have been reallocated in line with the geographical breakdown for 1987-1991.

1. Merchandise

Merchandise should be recorded on a fob-fob basis, which is not the case for Belgium which uses settlement statistics to draw up this item. Corrections from 1982-1991 were based on overall rates which were estimated from similar rates used in France and Germany. The amounts thus arrived at were deducted from the "merchandise" item and included in the "transport" item.

2. Transport

The amounts subtracted from the "merchandise" heading were included under "transport".

3. Other services

From 1987-1991, the geographical breakdown of the distributive trades (net accounting) was estimated in proportion to the breakdown of other intra- and extra-Community services. From 1982-1986, the geographical breakdown of the distributive trades was estimated in line with the average breakdown of other services between the intra- and extra-Community sphere, calculated for the period 1987-1991.

4. Income from labour

This item included pensions from 1982-1986 which were estimated in proportion to the period 1987-1991. Pensions have been therefore deducted.

5. Unilateral transfers

From 1982-1986, pensions estimated in line with data for the period 1987-1991 were reclassified under transfers in conformity with the methodology applied from 1987.

6. Geographical breakdown by zones

Such a breakdown was carried out for the BLEU.

7. Geographical breakdown of the total current balance by partner countries

The BLEU made a complete breakdown by partner countries between 1987 and 1991.

B. DENMARK

The central statistical service, "Danmarks statistik", sends revised data each year, normally relating to two years.

1. Geographical breakdown by zones

Denmark has not carried out a detailed geographical breakdown by zones.

2. Geographical breakdown of the total current balance by partner countries

Denmark has given partial information on 1989-1991. For this period, the missing partner countries have been estimated from the reference structure, which covers France, Germany, the Netherlands, the BLEU, Portugal and Spain.

A back-extrapolation was carried out for the period 1987-1988.

C. GERMANY

The Bundesbank sends revised data each year which relate to several years.

1. Investment income

Reinvested profits have been subtracted from "investment income".

2. Geographical breakdown by zones

A detailed geographical breakdown by partner zones has been carried out for Germany.

3. Geographical breakdown of the total current balance by partner countries

Germany made a complete breakdown by partner country between 1987-1991.

D. GREECE

The Bank of Greece sends figures in dollars each year. Revised data for the period 1982-1991 have been used in this publication. Some small differences emerge in comparison with the tables of the publication "International trade in services- EUR12 from 1982 to 1991".

1. Merchandise

Greece uses settlements to establish the "merchandise" item; no correction has been made.

2. Transport

The Greek information is produced in a fashion far removed from the IMF recommendations. The transport account was reconstituted from partner data. The intra-Community transport flows correspond to the transport flows of the other Member States vis-à-vis Greece. The flows vis-à-vis the total (intra + extra) were extrapolated in the total/intra proportion of the other Member States.

3. Tourism

Greek credits are very under evaluated by comparison with partner debits. They have been replaced for the intra by data from the other Member States. The credits vis-à-vis the total (intra + extra) were extrapolated in the total/intra proportion of the other Member States.

4. Other services

The other services were reconstituted for the intra-Community part from partner data. The flows vis-à-vis the total (intra + extra) were extrapolated in the total/intra proportion of the other Member States. The distribution over the sub-items of other services was estimated in line with the structure of the other Member States for calculating the EUR12 aggregate.

5. Income from labour

One part of the debits corresponds to services. The amounts of these services, estimated with the aid of partner data, have been deducted from labour income.

6. Unilateral transfers

Unilateral transfers vis-à-vis the BLEU and Community Institutions have been replaced by the corresponding data taken from the balance of payments of Community Institutions established by EUROSTAT.

7. Geographical breakdown by zones

Lack of data made it impossible to produce this breakdown and the information is, therefore, restricted to the intra- and extra-Community headings.

8. Geographical breakdown of the total current balance by partner countries

Greece gave information for 1987-1991; for this period, the missing partner countries have been estimated from the reference structure covering France, Germany, the Netherlands, the BLEU, Portugal and Spain.

E. SPAIN

The Banco de España generally sends revised data covering two years. In the most recent publications of the Bank, certain items have been revised for a longer period; these have not been taken into account in this publication. The flows with the European Institutions cannot be detected for certain years and are probably included under the extra-Community heading. Corrections have been made to unilateral transfers, this affecting the intra-balance. No correction has been made, however, for the other items.

1. Unilateral transfers

The flows with the Community Institutions are not identified from 1989-1991 and are not taken into account in the intra-Community geographical breakdown. For the years 1989 and 1990, these flows have been reclassified on the intra-Community side. The non-allocated flows cannot be detected for 1991 and the flows declared by the Community Institutions have therefore been added in.

2. Geographical breakdown by zones

The zones "Class 2", "ACP", "Other developing countries" and "Class 3" have been reconstituted, thanks to the complementarity of several questionnaires. A detailed breakdown by partner zones has been effected for Spain.

3. Geographical breakdown of the total current balance by partner country

Spain has supplied an adequate breakdown but for one year only (1991). A back-extrapolation has therefore been made for the period 1987-1990.

F. FRANCE

The Bank of France does not send revised data to EUROSTAT.

Two classification changes have occurred in the French system, the first in 1982-1983 and the second in 1988. The methodological change of 1988 causes breaks in the series which have been attenuated by back-extrapolation carried out by EUROSTAT, the basic principle being to use a single correspondence between the EUROSTAT and French classification for the entire period 1982-1991. For this purpose, data from the French publications for 1991 were used.

1. Merchandise

From 1982-1987 the item "merchandise" corresponds entirely with the same item in the French classification. From 1988-1991, part of the item "international trade" of the French system is included in the EUROSTAT heading "merchandise". No correction has been made for the years 1982-1987, international trade being included entirely under the EUROSTAT heading "trade".

2. Transport

From 1982-1987, a part of the "accessory costs of merchandise" in the French classification were included in the various "transport" sub-items in the data transmitted by France to EUROSTAT. From 1988-1991, France no longer included these under "transport", but they are to be found in the EUROSTAT heading "other services". For the years 1982-1987, corrections have, therefore, been made to the data as transmitted in order to reclassify "accessory costs of merchandise" and render the EUROSTAT item "transport" equal overall with the French items "maritime transport" and "other transport" for the entire period.

The geographical breakdown of the corrected data between intra- and extra-Community is in line with the geographical breakdown of the old data for the period 1982-1984.

3. Other services

From 1982-1987, the "trade" item published by EUROSTAT (as a balance only) corresponds entirely to the "international trade" of the French system. From 1988-1991, it only includes a part of same: the Bank of France has, in fact, redistributed its "international trade", one part being included in the EUROSTAT item "merchandise", the other part accounted for in net terms under the EUROSTAT item "other services". It has not been possible to correct this break in the series in 1988 for the items "merchandise" and "trade".

4. Geographical breakdown by zones

A detailed breakdown by partner zones has been carried out for France.

5. Geographical breakdown of the total current balance by partner countries

France has made a complete breakdown by partner country between 1987 and 1991. It has also provided, for each partner country, an extremely detailed breakdown by item which it was not possible to exploit in this study.

G. IRELAND

EUROSTAT has not received any annual data on the balance of payments since 1985.

The data used come from the IMF, the OECD and for 1991, from a CSO publication. The geographical breakdown between intra- and extra-Community is based on the data for 1979-1984.

1. Transport

The money paid by passengers to foreign transport operators is accounted under the "tourism" item in the classification of the IMF, OECD and Ireland. These amounts have been estimated in proportion to the 1979-1984 data and have been included in the debits of the Eurostat item "Passenger transport".

2. Tourism

The money paid by passengers to foreign transport operators have been estimated in proportion to the 1979-1984 data and have been deducted from the debits under this item.

3. Other services

The breakdown between intra- and extra-Community of the sub-items for other services is not given in the tables for Ireland. Estimates have been made to calculate the EUR12 aggregate.

The items "insurance", "communications services" and "commercial services" vis-à-vis the total for the intra- and extra-Community total come from OECD data.

4. Income from labour

This item has been estimated with the aid of the structure of the other Member States for calculating the EUR12 aggregate.

5. Investment income, government transactions and unilateral transfers

The geographical breakdown between intra- and extra-Community for these three items is based on the data for 1979-1984.

6. Geographical breakdown by zones

It was not possible to make a geographical breakdown by partner zones because of a lack of data; a distinction has thus been made between intra- and extra-Community only.

7. Geographical breakdown of the total current balance by partner countries

Ireland did not supply a breakdown. The estimate was made by applying the reference structure to the extra-Community total, which was estimated for the entire period 1987-1991.

H. ITALY

The Banca d'Italia sends data on paper each year. No revision is carried out. The geographical breakdown of services is inadequate; a large part is not allocated geographically and one part of the transactions of these services is probably carried out with other European countries; a comparison of the Italian data with the bilateral data of the other Member States with Italy provides evidence for this. In addition, Italy has introduced a new system, the first results of which have been published for December 1992. These show a geographical breakdown of services with the other Member States which is more consistent. It was therefore decided to use the intra/world proportions noted over the four months of available data (December 1992-March 1993) to correct the intra-/extra-Community breakdown for services and investment income for the years 1982-1991.

1. Geographical breakdown by zones

Italy has carried out a detailed estimate by partner zones.

2. Geographical breakdown of the total current balance by partner countries

Italy has provided a breakdown for 1991, the missing partner countries being estimated thanks to the "reference structure". A back-extrapolation was carried out to cover the period 1987-1990.

I. NETHERLANDS

The Nederlandsche Bank sends, each year, revised data for several years.

1. Geographical breakdown by zones

The Netherlands have made a detailed estimate by partner zones.

2. Geographical breakdown of the total current balance by partner countries

The Netherlands have made a complete breakdown by partner countries for the period between 1987 and 1991.

J. PORTUGAL

The Banco de Portugal sends, each year, data for one year, but only for the main items. There is no revision.

1. Geographical breakdown by zones

Portugal has made a detailed estimate by partner zones.

2. Geographical breakdown of the total current balance by partner countries

The breakdown made by Portugal for the period 1987-1991 is satisfactory. A back-extrapolation was carried out to cover the period 1982-1986.

K. UNITED KINGDOM

The Central Statistical Office normally sends, each year, revised data for two years. The main revisions were carried out on certain items in 1991 for the entire period 1982-1991 (see Pink Book 1991). These revisions have been taken into account as far as possible. Back-extrapolation has been effected, the main principle being to achieve a unique correspondence between the EUROSTAT system and the United Kingdom system for the entire period 1982-1991. The data in the Pink Book 1991 were used for this purpose.

1. Merchandise

The item "loss/damage to UK import" in the CSO classification includes part of insurance services (see Pink Book). The amount for this item was therefore entered under "insurance" and not "merchandise" as is the case with data sent to EUROSTAT.

2. Investment income

From 1982 to 1989, the breakdown of reinvested profits between intra- and extra-Community was estimated in line with the geographical breakdown for total investment income for the same year. For 1991, the geographical distribution of reinvested profits was estimated in relationship with 1990 data.

The reinvested profits have thus been deducted from investment income.

3. Income from labour

In the absence of information, the flows have been estimated with the aid of partner data for calculating the EUR12 aggregate. The estimated amounts have thus been deducted from the item "other services".

4. Unilateral transfers

Expenditure in the United Kingdom by non-residents students and journalists are credited to services in the CSO classification. These credits have been reclassified under the credits for the item "unilateral transfers". In accordance with the methodological notes in the Pink Book, expenditure abroad by students and journalists resident in the United Kingdom are included in the "tourism" heading.

5. Geographical breakdown by zones

A detailed estimate by partner zones has been carried out for the United Kingdom.

6. Geographical breakdown of the total current balance by partner countries

For the period 1988 to 1991, the United Kingdom has provided an extra-Community breakdown limited to a few partner countries: the USA, Japan, Canada and Turkey. The missing partner countries were estimated by means of the "reference structure". A back-extrapolation was then made for the year 1987.

L. EUROPEAN INSTITUTIONS

The EUROSTAT unit "Balance of payments" has provided revised data for the period 1982-1991.

1. Geographical breakdown by zones

The EUROSTAT unit "Balance of payments" has provided estimates for the entire period 1982-1991; here again, no correction has been carried out.

2. Geographical breakdown of the total current balance by partner countries

The EUROSTAT unit "Balance of payments" has provided a complete breakdown for the period 1987-1991.

M. EUR12

The EUR12 aggregate represents the sum of the flows of all the Member States plus the Community Institutions, with the exception of the corrected item for banking activities explained below.

In calculating EUR12, all the items estimated with the aid of the structure of those Member States having complete data are taken into account.

In the tables with EUR12 as declarant, the amounts for intra-EUR12 correspond to the intra-Community asymmetry and those for extra-EUR12 correspond to the world total less asymmetry.

1. Banking activities

In the United Kingdom, part of the receipts of the item "banking activities" corresponds to profits on the purchase or sale of financial assets. For the other Member States, the corresponding expenditure is recorded in the capital account. The difference in treating these transactions generates an asymmetry between the current account and the capital account. We have therefore decided to create intra-European debits corresponding to the British receipts.

2. Geographical breakdown by zones

The geographical breakdown of the EUR12 aggregate by partner zones for the period 1982-1991 was carried out by means of two complementary procedures: aggregation of the estimates of the various components for EUR12 (12 Member States + European Institutions) for the years 1990 and 1991, and recourse to the structures already estimated for the period 1982-1989. In addition, three components from the zone "other industrialized countries" have been broken down; these are "Canada", "Australia + New Zealand" and "Turkey".

3. Geographical breakdown of the total current balance by partner countries

The breakdown of the EUR12 total by partner countries for the period 1987-1991 was estimated by aggregating all its components (12 Member States + European Institutions).

N. UNITED STATES

As regards the US trade in services and their detailed geographical breakdown, the US Department of Commerce sent EUROSTAT revised data on a computer storage medium for the period 1986-1991. These data have been supplemented with the aid of the publications entitled "Survey of Current Business".

1. Unilateral transfers

The transfers are recorded in net terms.

2. Geographical breakdown by zones

It was not possible to provide a geographical breakdown by partner zones because of insufficient data; only an intra- and extra-Community breakdown is therefore made.

3. Geographical breakdown of the total current balance by partner countries

This was not carried out.

O. JAPAN

The data come from publications produced by the Bank of Japan. They were expressed in dollars and have been converted to ECUs. These data have been supplemented by OECD figures to give detailed services. From 1982 to 1985, the flows to the European Community did not take account of Spain and Portugal. These flows have been re-evaluated with the aid of Member State data to obtain flows to all the 12 Member States.

1. Transport and insurance

Transport insurance was included under transport. The value is known from OECD statistics. The breakdown between intra- and extra-Community transport insurance has been estimated in relationship to the breakdown of transport.

Transport insurance has been deducted from transport. Transport insurance has been added to the item covering insurance for other services.

2. Geographical breakdown by zones

It was not possible to provide a geographical breakdown by partner zones owing to insufficient data; only an intra- and extra-Community breakdown is therefore given.

3. Geographical breakdown of the total current balance by partner countries

This has not been made.

GEOGRAPHICAL CLASSIFICATION

The geographical classification in this study is that used by EUROSTAT for its external trade publications.

Germany is as constituted prior to 3 October 1990, including West Berlin.

By convention, "Total" is the sum of the two zones, intra-EUR12 and extra-EUR12.

The Class II total does not correspond exactly to the sum of the three sub-zones OPEC + ACP + Other Developing Countries, since Nigeria and Gabon belong both to the OPEC and the ACP.

Total (intra-EUR12 + extra-EUR12)
 Intra-EUR12
 Extra-EUR12
 Class I (industrial countries)
 USA
 Japan
 EFTA

It has not been possible to include these updates in the previous statistical tables considering the publication delay. Hence the updates have not been taken into account in the computation of the balance of the European Community. The impact of the updates on the Community balance is negligible. Next publication will integrate the updates.

European Commission

Geographical breakdown of the current account – EUR 12 from 1982 to 1991

Luxembourg: Office for Official Publications of the European Communities

1994 – 193 pp. – 21.0 × 29.7 cm

Theme 6: Foreign trade (red)
Series D: Studies and analyses

ISBN 92-826-7576-9

Price (excluding VAT) in Luxembourg: ECU 20

This document presents statistics on the geographical breakdown of the current account of the European Community (EUR 12) and its Member States for the period from 1982 to 1991. These figures are estimates calculated from balance of payments data.

Three levels of geographical breakdown are used in this publication.

- (i) A breakdown of the total current account between intra- and extra-EUR 12.
- (ii) A breakdown of extra-EUR 12 into zones (USA, Japan, EFTA, other industrial countries, OPEC, ACP, other developing countries, former State-trading countries).
- (iii) A breakdown of extra-EUR 12 by partner countries (100 countries).
