## **Foreword**

### **1. Introduction**

The environment in which trade statistics are collected has changed radically in recent years, leading to a detailed revision of the regulations. For statistics on trade with third countries, the introduction in 1988 of the Combined Nomenclature of goods (CN) and the Single Administrative Document had already led to considerable methodological changes. However, the major changes were brought about by the introduction of the single market on 1 January 1993. This led to the abolition of customs formalities between the Member States which had served as the traditional source of trade statistics, and the introduction of a special collection system called INTRASTAT.

Trade statistics – both detailed and general results – have now proved their worth. They are an instrument of prime importance for all users, both public and private. For instance, they enable Community authorities to prepare for multilateral and bilateral negotiations on the common trade policy, they help European businesses carry out market surveys and thus improve their competitiveness and they are an essential source of information for statistics on the balance of payments, the national accounts and short-term economic studies. This non-exhaustive list highlights the variety of users and their requirements.

The monthly bulletin on external and intra-European Union trade, published by Eurostat in the B series, Short-term Trends, sets out to provide within the shortest possible deadlines data on short-term trends in the trade of the European Union (EU) and its Member States. It contains data on the trade flows, broken down by major product group, of the EU with its main trading partners on the one hand and between the Member States on the other. Using a modernized production tool, this new version of the monthly bulletin aims to provide the reader with more information, in a more readable format. This bulletin comprises six parts:

- Trends in extra-EU and intra-EU trade
- The European Union and world trade
- The trading partners of the European Union
- Goods traded by the European Union with third countries
- The Member States and EU trade
- The external trade of the Member States.

While the first four parts (partially in the case of the first one) refer exclusively to EU trade (taken as a whole) with third countries, a comparison is made in the last two parts between the statistics on intra-EU trade and those on extra-EU trade. However, since the creation of Intrastat, the two types of statistics follow discrete methodologies and their aggregation may, therefore, involve risks.

Statistics on external trade and intra-EU trade at the most detailed classification level are published monthly on CD-Rom (Series B: intra and extra-EU trade). They are also available on-line from Eurostat's database (Comext).

Trends in external trade since 1958 and a comparison with world trade are contained in the publication "*External and Intra-EU Trade Statistical Yearbook (Series A)*".

### **2. Intra-EU trade**

Statistics on trade between the Member States are based on Council Regulation (EC) No 3330/91 of 7 November 1991 and on the various implementing regulations which have supplemented it or laid down rules on methodology, thresholds and forms. The system set up for the collection of information on trade between the Member States as from 1 January 1993 is commonly known as Intrastat. Its main features are:

- monthly statistical declarations sent directly by businesses to the competent national authorities;
- a system of thresholds abolishing all statistical obligations for almost two thirds of businesses;
- a close link with the VAT system.

Because of the introduction of this new system, the comparability of the intra-EU results prior to and after 1 January 1993 is limited, owing to a degree of under-estimation of flows. This was caused by the failure of some businesses to respond and the introduction of thresholds which exclude the smallest businesses. To correct this under-estimation, which varies according to the Member State, some countries make adjustments at an aggregate level (in general by partner country). Arrivals, i.e. imports from other EU countries, are particularly under-estimated. Consequently, Eurostat considers dispatches now to be the most reliable gauge of intra-EU trade.

If the dispatches of a given Member State are compared with the corresponding arrivals of its partners, differences may emerge, mainly for the following reasons:

- the threshold effect: a business may be obliged to provide statistical information in one Member State while its client or supplier, depending on the case, in the partner country may be dispensed from providing any or certain types of statistical information (e.g. product classification), thus preventing comparison at the most detailed level;
- the link with tax: this may result in a time-lag between the recording of dispatches and that of the corresponding arrivals. In addition, for certain special transactions (eg. triangular transactions or outside processing) distortions may arise because of the difficulty in obtaining information on the partner country or on the statistical value of the goods. Tax fraud may have an effect, which is difficult to assess, on statistical declarations (under-assessment of arrivals, over-assessment of dispatches or failure to make a declaration);
- there may be other reasons, already in existence before 1993, for discrepancies (goods classified under different headings of the product nomenclature, different statistical values for dispatches and arrivals, etc.) and in addition there may be mistakes or omissions which are unavoidable despite the constant efforts by Eurostat and the Member States to improve the quality and topicality of statistical information.

For these reasons, figures on intra-EU trade should be interpreted with caution. They are also subject to frequent revision.

### **3.      *Extra-EU trade***

For data on the years 1978 to 1995, the Member States forwarded statistics on trade outside the European Union in accordance with a uniform methodology provided for in Council Regulation (EEC) N° 1736/75 and the regulations deriving from it. Since the beginning of 1996, data have been submitted in accordance with Council Regulation (EC) N° 1172/95 and its implementing rules which however retain the former methodological principles.

External trade statistics are usually recorded on the basis of customs declarations submitted by the declarant when clearing customs. The Single Administrative Document is used for this purpose. In some Member States, certain businesses are allowed to make a summary declaration.

Statistics on external trade and intra-EU trade are compiled on the basis of Community regulations. The same regulations are generally the basis for the compilation of statistics published nationally by each Member State. Nevertheless, methodological differences do arise, as a result of which Community statistics and national statistics do not match exactly.

## **Methodological notes and sources**

### **1. Data sources**

The tables in this publication on EU trade and that of the Member States were compiled by Eurostat using the detailed data forwarded by the Member States. Eurostat would like to take this opportunity to thank the departments concerned in the Member States for their cooperation, which makes it possible to compile these harmonized statistics and guarantee their quality.

Some of the tables in the first two parts describe the development of external trade as declared by some of the EU's most important trading partners. With the exception of Table 1C and the results concerning the EU, these tables were compiled from data taken from the tapes sent each month by the International Monetary Fund. The information in table 1C is taken from the Comtrade database, which is managed by the United Nations.

### **2. Coverage**

#### **2.1. Intra-EU trade**

Statistics on trade between the Member States cover the arrivals and dispatches of movable property recorded by each Member State. Arrivals and dispatches are defined as follows:

- *arrivals* are goods in free circulation within the European Union which enter the statistical territory of a given Member State;
- *dispatches* are goods in free circulation within the European Union which leave the statistical territory of a given Member State to enter another Member State.

Goods placed under the customs arrangements of inward processing or processing under customs control (for working, processing or repairs) are also regarded as arrivals or dispatches.

The reader should also note that statistics on trade between the Member States do not cover goods in transit or trade between Member States and, for example, the French overseas departments or the Canary Islands.

#### **2.2. Extra-EU trade**

Statistics on trade with third countries cover movable property imported and exported by the European Union. The definitions are as follows:

- *imports* are goods which enter the statistical territory of the European Union from a third country and are placed under the customs procedure for free circulation (as a general rule goods intended for consumption), or inward processing, or processing under customs control (goods for working, processing or repair) immediately, or after bonded warehousing;
- *exports* are goods which leave the statistical territory of the European Union for a third country after being placed under the customs procedure for exports (definitive export) or outward processing (goods for working, processing or repair).

Statistics on trade with third countries do not, therefore, include goods in transit or those placed under a customs procedure for bonded warehousing or temporary entry (for fairs, exhibitions, tests, etc.) nor do they include re-export following entry under one of these procedures.

The field covered by statistics on trade with third countries corresponds to "special" trade. This method of accounting differs from that of "general" trade, which includes all goods entering the statistical territory and those leaving it, with the exception, however, of goods in transit. Goods placed in bonded warehouses and exports of goods after bonded warehousing are included in the definition of general trade.

### **3. Statistical data**

#### **3.1. Statistical territory**

The statistical territory of the European Union comprises the customs territory of the European Union, excluding the French overseas departments (Guadeloupe, Guyana, Martinique and Réunion) and the Canary Islands, which are therefore considered as third countries. Likewise, Greenland, Ceuta and Melilla are not covered, nor are the overseas countries and territories which are not part of the EU customs territory.

Since October 1990, the external trade data of Germany refers to the Federal Republic of Germany in its borders as of 3 October 1990, i.e. after reunification.

### *3.2. Trading partners: countries and economic areas*

The results are broken down by country and area in accordance with the "Country nomenclature for statistics on European Union external trade and trade between its Member States", referred to as the Geonomencalature (Geonom). For the purposes of presenting the results, Eurostat has defined geographical and economic areas.

In the case of exports (or dispatches), the country (or Member State) of final destination of the goods is the partner country.

The trading partner in the case of an intra-European Union arrival is always the Member State of consignment of the goods, even when the goods originate in third countries and have been placed in free circulation in the Member State of consignment. For imports (extra-EU trade) the statistics show, except in certain cases (returned goods, objects of art, etc.), the country of origin. Where two or more countries were involved in the production of certain goods, the country where the final processing or substantial working took place is considered to be the country of origin.

### *3.3. Goods classification*

The most detailed results published by Eurostat and accessible to the public on magnetic medium are broken down according to the subheadings of the Combined Nomenclature (CN). This tariff and statistical nomenclature is based on the international nomenclature of the Harmonized System (HS) and comprises around 10 000 eight-digit codes.

In this publication, the results are broken down by the sections and divisions of the UN Standard International Trade Classification (SITC Rev. 3 since 1988) by means of conversion tables drawn up by Eurostat on the basis of the CN.

### *3.4. Estimate of the statistical value*

Although the data is collected in units of national currency, the values set out in this bulletin have been expressed, after conversion, in European Units of Account (ECU). The ECU is a "basket" currency unit based on the market exchange rates of a specific quantity of each European Union currency according to a weighting system involving the five-year average of each Member State's gross national product and intra-EU trade balance. The rates used in this bulletin are averages of daily rates. The annex to the bulletin contains a table showing the conversion rates used.

#### *3.4.1. Intra-European Union trade*

The statistical value is based on the assessment for taxation purposes or the amount billed. It is the FOB (free on board) value for dispatches and the CIF (cost, insurance, freight) value for arrivals. It comprises only those subsidiary costs (freight and insurance) which relate, for dispatches, to the journey to the border of the Member State from which the goods are dispatched and, for arrivals, to the journey to the border of the Member State into which the goods enter.

In the case of arrivals or dispatches under an inward or outward processing arrangement and those for outside processing, it is always the total value of the goods that is recorded and not simply the added value.

#### *3.4.2. Extra-European Union trade*

The statistical value is based on the amount billed (real or provisional) or if it exists, on the customs value. It is the FOB value for exports and the CIF value for imports. It comprises only those subsidiary costs (freight and insurance) which relate, for exports, to the journey within the territory of the Member State from which the goods are exported and, for imports, to the journey outside the territory of the Member State into which the goods are imported.

In the case of imports or exports under an inward or outward processing arrangement and those for outside processing, it is always the total value of the goods that is recorded and not simply the added value.

### *3.5. Statistical secrecy*

Most Member States take measures to guarantee the confidentiality of certain flows of goods. The legislation, the procedures for implementing it, and the range of goods subject to secrecy vary from one Member State to another.

This confidentiality applies to the most detailed level of the classification used for collecting the data: it may therefore refer to all or only part of a subheading of the Combined Nomenclature. Similarly, confidentiality may apply to imports only, or to exports only, or to only some of the variables recorded (value, statistical procedure, quantities, partner country, etc.).

Measures are taken during collection and during processing by Eurostat to minimize the effect of confidentiality on the results. In particular, subheadings which include confidentialized trade data are included at higher levels of aggregation and in totals.

## **4. Indices**

### **4.1. Introduction**

Changes over time in the value of trade are influenced by changes in prices and the quantities marketed. Eurostat calculates Fisher's annual chain indices to measure these two effects. This publication sets out the indices calculated according to the SITC for each Member State on a strictly comparable basis. These indices may be consulted on the TREND database.

### **4.2. Data sources**

The data transmitted for external trade and intra-European Union trade statistics are used at the most detailed level for calculating the indices. The indices of unit values (values divided by quantities) are used as price change indicators. The computer programs contain a system for automatically identifying extreme unit values pointing to unlikely price movements.

Two rules are applied to exclude unlikely price behaviour. The first is that, given the general level of inflation, the price of a product will not change significantly compared with its level the previous year. Any change of five points or more is considered suspect. The second rule – which is more restrictive – is that the change in the price of a product compared with the closest month available will not differ significantly from the average change in the price of similar products. The application of these rules prevents extreme changes due to factors unrelated to prices which, otherwise, would lead to a distortion of the unit value index. For products whose unit values are rejected, the changes are drawn up according to those of similar products.

## **Trends in European Union trade**

## GLOBAL TRENDS IN WORLD TRADE

**In the first half of 1996 the European Union's trade balance improved by ECU 3 billion compared to the same period in 1995. In the same period, the United States' deficit fell by ECU 2.2 billion while Japan recorded a deterioration of ECU 21 billion in its balance.**

**Between January and June 1996, the EU as a whole confirmed its position as the world's leading exporter, while the United States was the most important world outlet.**

In the first half of 1996 the **European Union's**<sup>1</sup> external trade balance was ECU 11 billion in surplus whereas in the same period of 1995 it had shown a surplus of 8 billion. The yearly growth rates of extra-EU exports and imports were 6% and 5.1% respectively.

Between January and June 1996 the EU as a whole confirmed its position as the leading world exporter (ECU 296 billion, corresponding to a 20.3% share of world exports), while on the import side it ranked in second place with 18.2% (ECU 285 billion).

From January to June 1996, the **United States'** trade deficit showed a slight decrease (ECU 2.2 billion) compared with a year earlier, and amounted to a total of ECU 66 billion. This was due to the gap between export and import growth rates (10% against 7%).

Despite a slight decline since 1995, the United States confirmed its first place in the world ranking of importers, with a share of 19.7%.

In the first six months of 1996, **Japan** recorded a trade surplus of ECU 23 billion, down from the 44 billion registered in the same period of the previous year. This result was due to the high growth rate of Japanese imports (+8.5% over the previous year), together with a decrease in the value of its exports (-6.2%).

As a result, the Japanese share of world exports sank to 10.9%, while its share of imports remained stable at 8.7%.

1. The European Union's figures for 1996 are provisional and subject to frequent revisions. The symbol ":" indicates that the figure is not available. The 1994 figures for the three new Member States (Austria, Finland and Sweden) are estimated using different international sources which do not follow EU methodology; for this reason, the growth rates for these countries should be treated with caution.

## EU EXTERNAL TRADE BY MAIN PARTNER

The EU balance with its Central and Eastern European (CEE) partners showed the largest surplus in the first half of 1996 (ECU 9.4 billion), while trade with Japan and China registered the highest deficits (ECU 9 and 7.3 billion respectively).

Trade flows with the **United States** (the most important individual partner for the EU, with an 18.5% share in 1995) showed a deficit of ECU 3.2 billion in the period January–June 1996.

This represents a deterioration compared with the first half of the previous year, when the EU-US balance showed a deficit of ECU 2.4 billion, and it is due to the one percentage point gap between export and import growth rates: 8.5% and 9.5% respectively.

Between January–June 1995 and 1996 the trade balance with **Japan** improved by 2.7 billion to an ECU 9 billion deficit, while in the same period, the trade deficit with the **EFTA** countries stabilized at around ECU 1 billion.

EU exports to Japan were in fact quite dynamic, with growth rates over the previous year of +10%, while imports over the same period showed a negative rate of change (-4.1%).

EU exports to the **CIS** and the **CEE** countries were the most dynamic flows between the first half of 1995 and 1996 (growth rates of +22% and +18%), while the corresponding imports either declined or remained sluggish (-7.8% and +3.5% respectively). As a consequence, the EU trade balances with these countries (which in 1995 together accounted for around 13.6% of total extra-EU flows) improved sharply by ECU 3.1 and 4.3 billion respectively.

EU exports to the **Latin American** and **DAE** countries were fairly sluggish (-1% and +3% compared with January–June 1995), while on the imports side the growth rates were higher (+5% and +8.4% respectively). The gaps registered between the rates of change for exports and imports reduced the EU surplus with these countries (which accounted for 5.5% and 11% of EU external trade in 1995) to ECU 0.9 and 5.4 billion respectively.

The first half of 1996 saw a sharp expansion in EU imports from **China** (+13.5% compared to the corresponding period of the previous year), together with a stagnation in the value of the Union's exports to this country (+0.2% growth rate). As a consequence, the EU-China trade deficit rose by ECU 1.6 billion in January–June 1996 reaching ECU 7 billion.

## EU EXTERNAL TRADE BY MAIN PRODUCTS

**During the first half of 1996, the EU's trade balance in machinery and transport equipment recorded the greatest surplus (ECU 39 billion), while fuel products showed the largest deficit (ECU 30 billion).**

In the period January–June 1996, the **primary products (SITC 0–4)** deficit rose to ECU 45.3 billion compared to the ECU 43.8 billion registered in the corresponding period of 1995.

The EU trade deficits in fuel products (SITC 3) and food, beverages and tobacco (SITC 0+1) grew by ECU 2.4 and 0.7 billion respectively, while the balance for raw materials except fuel (SITC 2+4) showed an improvement of ECU 1.7 billion compared to a year earlier.

Between January–June 1995 and 1996, the dynamics of the flows for primary products (which in 1995 accounted for 11% of total extra-EU exports and 27% of imports) were fairly sluggish in overall terms, due to a combination of increases and decreases within the different categories of raw materials. Trade in fuel products (SITC 3), propped up by the increase in international oil prices (the ECU cost of the EU's crude oil supplies rose by 13% in the first half of 1996), saw increases in export and import flows of 15.7% and 9.7% respectively, while the other raw materials (SITC 2+4) registered negative growth rates for both flows.

As far as **manufactured products (SITC 5–8)** are concerned (87% of total extra-EU exports and 70% of imports in 1995), EU external trade showed a surplus of ECU 60 billion compared to the ECU 54 billion registered in 1995.

Apart from the slight reduction of the EU surplus in machinery and transport equipment (SITC 7) by ECU 0.7 billion, the trade balances for other manufactured goods (SITC 6+8) and chemical products (SITC 5) improved by ECU 4.5 and 1.6 billion respectively.

Among the sections encompassing manufactured products, the most impressive rates of growth were recorded by imports of machinery and transport equipment (SITC 7) (+9.9%) and exports of other manufactured goods (SITC 6+8) (+8.1%), while the other products showed more moderate rates of change.

## EXTRA-EU TRADE

**Germany and Italy showed the two largest extra-EU surpluses among the EU countries, while the Netherlands and the United Kingdom registered the highest external deficits.**

In the first half of 1996, **Germany** was the EU Member State with the largest extra-EU trade surplus (ECU 12.6 billion). This represents a slight improvement (0.5 billion) over the previous year, and is due to the small positive gap (0.2 percentage points) between the growth rates for exports and imports.

Germany is also the most important player in trade between the EU and third countries. Its 1995 share of total extra-EU exports amounted to 29.3%, while the figure for imports stood at 25.7%.

The second-ranked country (in trade value terms) was the **United Kingdom** (which in 1995 accounted for 12.8% and 17% of exports and imports respectively). The UK was also the EU Member State with the largest trade deficit (ECU 12.4 billion) in January–June 1996.

**Italy** displayed the second-largest extra-EU trade surplus (ECU 9.8 billion) among the EU Member States. The remarkable 4.4 billion improvement compared to the first half of 1995 was due to very high increase in extra-EU exports (+17%), while imports grew by only 5.6%.

Between January–June 1995 and 1996, **France's** imports increased faster than its exports, the growth rates being 3.5% and 1.5% respectively. As a consequence, France's trade surplus showed a reduction compared to the previous year (ECU 0.6 billion), reaching ECU 7.2 billion.

In January–June 1996 the **Dutch** extra-EU deficit fell by 0.1 billion compared with the same period in 1995, representing the second-largest deficit among the EU Member States. Both import and export flows showed a reduction between January–June 1995 and 1996 of –2.9% and –4.6% respectively.

After the boom experienced in 1995 (+15% growth rate), **Belgium–Luxembourg** extra-EU imports grew slowly in the first half of 1996 compared to the previous year (2.3%). However due to the reduction in the extra-EU exports of these two countries (–0.6%), their trade balance deteriorated by ECU 0.5 billion.

The three new Member States (8% of total EU trade in 1995) together contributed positively to the EU external trade balance in the first six months of 1996. **Sweden**, **Finland** and **Austria** together displayed a surplus of ECU 11 billion.

Sweden's extra-EU exports were fairly dynamic in January–June 1996, showing growth rates of 18.4%, while Austria and Finland registered more moderate rates of change. On the imports side, only Sweden had a significant growth rate (+4.2%), while for the other two countries extra-EU imports were either stable or slightly in decline.

Among the five remaining Member States (which together accounted for about 10% of extra-EU flows in 1995), **Greece**, **Ireland** and **Portugal** registered fairly high growth rates on their extra-EU exports in the first half of 1996 (+39%, +21.5% and +9.5% respectively), while the performances of **Denmark** (+4.1%) and **Spain** (+1.3%) were less impressive.

As far as the trade balance is concerned, Greece and Spain – due to the large gap between their import and export growths rates – registered extra-EU deficits in January–June 1996 of ECU 1.9 billion and 2.7 billion respectively, substantially up on the first six months of 1995.

## INTRA-EU TRADE <sup>2</sup>

**The Netherlands and Germany produced the two largest intra-EU surpluses, while Austria and Greece recorded the highest internal deficits.**

The first estimate of intra-EU trade in the period January–June 1996 showed a total value for dispatches (i.e. exports, which are the more reliable measure of intra-EU trade) of around ECU 526 billion, an increase of 3.7% compared with a year earlier.

The **Netherlands** was the Member State with the largest intra-EU surplus, which in the first half of 1996 grew to ECU 19 billion, up by 1.5 billion compared with the same period of 1995.

During January–June 1996, the growth rate of the country's intra-EU dispatches slowed to a modest +5% (compared to the 20% registered at the end of 1995), while the dynamics of arrivals were even more sluggish (+3.5% growth rate).

As mentioned for extra-EU trade, **Germany** is also the most important player in trade with the EU partners, its 1995 share of total intra-EU trade amounting to 21.5%.

In the first six months of 1996, this country registered the second-largest intra-EU trade surplus (ECU 11.5 billion), a fall of 0.8 billion compared with the same period of the previous year.

**France** was the second-ranked country in terms of volume of trade with EU partners, with a 1995 share of 15.2%. In the first half of 1996 its intra-EU trade displayed a deficit of ECU 2.8 billion, an improvement of 0.2 billion over the same period in 1995.

Similarly, the **United Kingdom**'s internal deficit stabilized compared to a year earlier at ECU 3.2 billion. In fact, the UK's growth rates for arrivals and dispatches for the first half of 1996 were very close (around 7%).

**Italy** and **Ireland** registered the most dramatic growth rates in their intra-Union flows during January–June 1996. As far as dispatches are concerned, the rates were 13.3% and 13.1% respectively, while on the arrivals side the figures were 9% and 14.1%. As a consequence, the intra-EU surplus of both countries increased compared to the first half of 1995 by ECU 2.3 billion for Italy and ECU 0.5 billion in the case of Ireland.

With a 1995 share of around 10%, **Belgium-Luxembourg** were also important players in intra-EU trade. During January–June 1996, these countries registered an intra-EU surplus of ECU 5.5 billion. This represented a reduction of ECU 1.6 billion compared to a year earlier, mainly due to the fall (-4% over January–June 1995) in the value of dispatches to EU partners.

As far as the three new Member States are concerned, only **Austria** showed an intra-EU deficit (ECU 4 billion), while **Sweden** and **Finland** confirmed their surpluses in trade with their EU partners.

Among the remaining four Member States (together accounting for 10.5% of intra-EU trade in 1995), only **Denmark** displayed a small intra-EU surplus in the first half of 1996 (ECU 0.8 billion), while **Portugal**, **Spain** and **Greece** registered internal deficits of ECU 2.2, 2.5 and 3.9 billion respectively.

2. On 1 January 1993, following the abolition of customs controls in the EU, a new collection system for intra-EU data (Intrastat) was introduced. Instead of being derived from customs declarations, trade figures are now compiled from data provided directly by companies

## SEASONALLY ADJUSTED TIME SERIES OF EU TRADE

Due to a lack of new data, these results are the same as in the previous bulletin.

### Extra-EU trade<sup>1</sup>

The seasonally adjusted time series of EU exports passed the ECU 50 billion mark in March 1996 and remained above that level in the following months. In the first half of 1996, exports rose by a seasonally adjusted 6.3% compared with the same period in 1995.

The EU's imports declined at the beginning of 1996 to below ECU 47 billion on a seasonally adjusted basis, but rose to ECU 47.1 billion in May and ECU 48 billion in June, an increase of 6.2% compared with June 1995. In the first half of the year, imports rose by 6.3% compared with the same period in 1995.

In the first half of 1996, as in 1995 as a whole, the EU's seasonally adjusted trade balance was clearly positive. In the second quarter of 1996, the EU achieved a surplus of ECU 10.1 billion, following one of ECU 7.9 billion in the first quarter. The surplus for June, however, declined by ECU 1.2 billion from the May total, to ECU 2.5 billion.

### Intra-EU trade<sup>2</sup>

Seasonally adjusted trade between the EU Member States increased slightly at the beginning of 1996 (up by 1% in the first quarter compared with the last quarter of 1995). It declined in April, however, falling below ECU 85 billion. The figures for May (ECU 84.2 billion) and June (ECU 84.7 billion) were at about the levels seen in 1995.

Extra-EU trade: exports  
(in ECU billions)

Extra-EU trade: imports  
(in ECU billions)

Extra-EU trade: balance  
(in ECU billions)

Intra-EU trade (dispatches)  
(in ECU billions)

<sup>1</sup> The series described here relate to EUR 12 up to and including 1994 and to EUR 15 as from 1995 (when Austria, Finland and Sweden joined the EU).

<sup>2</sup> Dispatches are used to represent intra-EU trade. Figures for the years up to and including 1994 relate to EUR 12.

(1) The ECU is a 'basket' monetary unit based on the market exchange rates of certain quantity of each European Union currency weighted on the basis of the average gross national product over five years and of the intra-EU trade of each Member State. The rates used here are averages of the daily rates.

## LIST OF PRODUCTS : SITC, REV. 3

### **0 Food and live animals**

- 00 Live animals other than animals of division 03
- 01 Meat and meat preparations
- 02 Dairy products and birds' eggs
- 03 Fish (not marine mammals), crustaceans, molluscs and aquatic invertebrates and preparations thereof
- 04 Cereals and cereal preparations
- 05 Vegetables and fruit
- 06 Sugars, sugar preparations and honey
- 07 Coffee, tea, cocoa, spices, and manufactures thereof
- 08 Feeding stuff for animals (not including unmilled cereals)
- 09 Miscellaneous edible products and preparations

### **1 Beverages and tobacco**

- 11 Beverages
- 12 Tobacco and tobacco manufactures

### **2 Crude materials, inedible, except fuels**

- 21 Hides, skins and fur skins, raw
- 22 Oil seeds and oleaginous fruits
- 23 Crude rubber (including synthetic and reclaimed)
- 24 Cork and wood
- 25 Pulp and waste paper
- 26 Textile fibres (other than wool tops and other combed wool), and their wastes (not manufactured into yarn or fabric)
- 27 Crude fertilizers, other than those of division 56, and crude minerals (excluding coal, petroleum and precious stones)
- 28 Metalliferous ores and metal scrap
- 29 Crude animal and vegetable materials, n.e.s.

### **3 Mineral fuels, lubricants and related materials**

- 32 Coal, coke and briquettes
- 33 Petroleum, petroleum products and related materials
- 34 Gas, natural and manufactured
- 35 Electric current

### **4 Animal and vegetable oils, fats and waxes**

- 41 Animal oils and fats
- 42 Fixed vegetable fats and oils, crude, refined or fractionated
- 43 Animal or vegetable fats and oils, processed; waxes of animal or vegetable origin; inedible mixtures or preparations of animal or vegetable fats and oils, n.e.s

### **5 Chemicals and related products, n.e.s**

- 51 Organic chemicals
- 52 Inorganic chemicals
- 53 Dyeing, tanning and colouring materials
- 54 Medical and pharmaceutical products
- 55 Essential oils and resinoids and perfume materials; toilet, polishing and cleaning preparations
- 56 Fertilizers (other than those of group 272)
- 57 Plastics in primary forms
- 58 Plastics in non-primary forms
- 59 Chemical materials and products, n.e.s

### **6 Manufactured goods classified chiefly by material**

- 60 Complete industrial plant appropriate to section 6
- 61 Leather, leather manufacture, n.e.s, and dressed fur skins
- 62 Rubber manufacture, n.e.s
- 63 Cork and wood manufacture (excluding furniture)
- 64 Paper, paperboard and articles of paper pulp, of paper or of paperboard
- 65 Textile yarn, fabrics, made-up articles, n.e.s, and related products
- 66 Non-metallic mineral manufactures, n.e.s
- 67 Iron and steel
- 68 Non-ferrous metals
- 69 Manufacture of metals, n.e.s

## LIST OF PRODUCTS : SITC, REV. 3

### **7 Machinery and transport equipment**

- 70 Complete industrial plant appropriate to section 7
- 71 Power-generating machinery and equipment
- 72 Machinery specialized for particular industries
- 73 Metal working machinery
- 74 General industrial machinery and equipment, n.e.s, and machine parts, n.e.s
- 75 Office machines and automatic data-processing machines
- 76 Telecommunications and sound recording and reproducing apparatus and equipment
- 77 Electrical machinery, apparatus and appliances, n.e.s and electrical parts thereof (including non-electrical counterparts n.e.s of electrical household type equipment)
- 78 Road vehicles (including air-cushion vehicles)
- 79 Other transport equipment

### **8 Miscellaneous manufactured articles**

- 80 Complete industrial plant appropriate to section 8
- 81 Prefabricated buildings; sanitary plumbing, heating and lighting fixtures and fittings, n.e.s

- 82 Furniture and parts thereof; bedding, mattresses, mattress supports, cushions and similar stuffed furnishings
- 83 Travel goods, handbags and similar containers
- 84 Articles of apparel and clothing accessories
- 85 Footwear
- 87 Professional, scientific and controlling instruments and apparatus, n.e.s
- 88 Photographic apparatus, equipment and supplies and optical goods, n.e.s; watches and clocks
- 89 Miscellaneous manufactured articles, n.e.s

### **9 Commodities and transactions not classified elsewhere in SITC**

- 91 Postal packages not classified according to kind
- 93 Special transactions and commodities not classified according to kind
- 94 Complete industrial plant, not elsewhere specified
- 96 Coin (other than gold coin) not being legal tender
- 97 Gold, non-monetary (excluding gold, ores and concentrates)
