N

METHODOLOGY

The consumer price indices given here are the national indices which have different names in the different countries. As far as trends are concerned, the general index published by EUROSTAT always corresponds to the general index published by the country concerned. The component items of this general index are groups of national indices aggregated according to a harmonized classification conforming to the ESA (European System of Integrated Economic Accounts). For these groups, the price trends correspond to the trends noted by the national indices for the same classification field.

The field covered by the general index varies according to country: as regards the population concerned (specific income bracket, certain socio-professional categories or total households), the geographical areas used (capital, urban areas, country as a whole, etc.) or differences in treatment of expenditure on rent, health care etc. Finally, there is no uniform method for seasonal adjustments.

A fixed base system is used in some countries, whereas in others a chain system is used (variable weightings). The reference years used at national level for the indices vary according to country. For ease of comparison, EUROSTAT has chosen 1980 as the common year for the presentation of these indices.

CALCULATION OF EUR-10 AND EUR-12 INDICES

The EUR-10 and EUR-12 indices calculated by EUROSTAT are weighted indices.

The weighting used is the proportion of each country in the total consumption of EUR-10 and EUR-12 respectively. The values of this consumption in national currency are converted in purchasing power standards. For this purpose the purchasing power parities of the G.D.P. are used.

The index calculated is of the chain Laspeyres type.

However, the weighting is displaced by three years since the national accounts data become available with a delay of approximately three years. For example: the weighting used for 1986 is that of 1983, for 1980, that of 1977.

Moreover, the national accounts data are often modified, leading to revisions.

In order to avoid continuous corrections in the EUR-10 and EUR-12 indices, EUROSTAT has decided to "freeze" the historical data.

When Member States carry out major revisions in price series for past years, EUR-10 and EUR-12 data will be calculated using the new series.
