

Consumer price index

2 □ 1988 Monthly

CONSUMER PRICE INDEX : Inflation still moderate in the Community.

The increase in the consumer price index for February was modest in all the member States except Denmark (+0.8%) and Portugal (+1.4%).

Increases in most of the countries were between 0.2% and 0.3%, with Greece recording its second consecutive fall (-0.5%) after the 0.2% drop in January.

The quarterly index for Ireland went up of 0.7% between mid-november 1987 and mid-February 1988, which corresponds to a monthly increase of about 0.2%. As a result of this the CPI for the Community as a whole rose by only 0.3%, thus continuing the trend already established since the beginning of 1987.

The 12-monthly inflation rates in the Community (Feb 88/Febr 87) currently stand between 0.6% and 13.4%. This represents a narrowing of the differences in inflation between Member States, Greece having achieved encouraging results during the past few months.

12-monthly inflation rates (February 1988/February 1987)

Up to 2%	Between 2 and 5%	Over 5%
Luxembourg + 0.6	France + 2.4	Denmark + 5.2
Netherlands + 0.7	United Kingd. + 3.3	Portugal + 8.9
F.R.Germany + 0.9	Spain + 4.4	Greece +13.4
Belgium + 1.0	Italy + 4.9	
Ireland + 1.9		

The 12-Monthly rate for the Community as a whole is 3% (1) while for Japan and the United States it is 0.9% and 3.9% respectively.

In terms of inflation, the Community has therefore retained the edge which it has held over the United States since April last year.

(1) Eurostat is currently reviewing the CPI for the Community as a whole (EUR 12) on the basis of the updated weightings. The EUR 12 index should therefore be interpreted with caution until publication of the updated indices in the next issue.

METHODOLOGY

The consumer price indices given here are the national indices which have different names in the different countries. As far as trends are concerned, the general index published by EUROSTAT always corresponds to the general index published by the country concerned. The component items of this general index are groups of national indices aggregated according to a harmonized classification conforming to the ESA (European System of Integrated Economic Accounts). For these groups, the price trends correspond to the trends noted by the national indices for the same classification field.

The field covered by the general index varies according to country: as regards the population concerned (specific income bracket, certain socio-professional categories or total households), the geographical areas used (capital, urban areas, country as a whole, etc.) or differences in treatment of expenditure on rent, health care etc. Finally, there is no uniform method for seasonal adjustments.

A fixed base system is used in some countries, whereas in others a chain system is used (variable weightings). The reference years used at national level for the indices vary according to country. For ease of comparision, EUROSTAT has chosen 1980 as the common year for the presentation of these indices.

CALCULATION OF EUR-10 AND EUR-12 INDICES

The EUR-10 and EUR-12 indices calculated by EUROSTAT are weighted indices.

The weighting used is the proportion of each country in the total consumption of EUR-10 and EUR-12 respectively. The values of this consumption in national currency are converted in purchasing power standards. For this purpose the purchasing power parities of the G.D.P. are used.

The index calculated is of the chain Laspeyres type.

However, the weighting is displaced by three years since the national accounts data become available with a delay of approximately three years. For example: the weighting used for 1986 is that of 1983, for 1980, that of 1977.

Moreover, the national accounts data are often modified, leading to revisions.

In order to avoid continuous corrections in the EUR-10 and EUR-12 indices, EUROSTAT has decided to "freeze" the historical data.

When Member States carry out major revisions in price series for past years, EUR-10 and EUR-12 data will be calculated using the new series.
