

Consumer price index

6 □ 1988 Monthly

CONSUMER PRICE INDEX: Rise of 0.3% in June: inflation rate slightly higher than in 1987.

The CPI for the Community as a whole rose by 0.3% between May and June 1988.

The biggest rise was recorded in Greece (+1.3%). Rises in other EC countries were as follows: 0.2% in Germany, Belgium and Luxembourg, 0.3% in France and Italy, 0.4% in the UK and Spain, 0.5% in Portugal.

The Danish index remained unchanged between May and June (0.0%), whereas the Dutch index went down slightly (-0.1%). The quarterly index for Ireland went up by 0.5% between mid-February and mid-May, which corresponds to an average monthly rise of less than 0.2%.

A comparison with the situation a year ago shows that inflation is slightly higher this year in most of the EC countries.

	Rates over 12 months		Rates over 12 months		
	6.88/6.87	6.87/6.88	6.88/6.87	6.87/6.88	
Netherlands	+0.9%	-0.4%	Spain	+4.3%	+3.4%
Germany	+1.1%	+0.2%	U.K.	+4.6%	+4.2%
Belgium	+1.1%	+1.7%	Denmark	+4.6%	+3.4%
Luxembourg	+1.5%	-0.4%	Italy	+4.9%	+4.2%
Ireland	+1.9%	+2.8%	Portugal	+9.2%	+8.9%
France	+2.6%	+3.3%	Greece	+11.8%	+18.1%

Exceptions are Belgium, Ireland, France and Greece, where inflation rates are below the level of 1987. In this context, it should be mentioned that the inflation rate of Greece went down from 18.1% in June 1987 to 11.8% in June 1988.

The inflation rate over 12 months for the USA has been 3.9% since February and remains higher than that of the Community, which is 3.0% for June 1988 against 2.8% in June 1987. The rate for Japan is by far the lowest in this comparison (+0.2% in June 1988).

It is interesting to mention that for the non-Community countries, the inflation rate is below the EC average in Austria (+1.4%) and Switzerland (+2.0%), whereas it is above the EC average in Norway (+7.2%), Sweden (+6.4%), Finland (+5.1%) and Canada (+3.9%).

METHODOLOGY

The consumer price indices given here are the national indices which have different names in each country. As far as trends are concerned, the general index published by EUROSTAT always corresponds to the general index published by the country. The component items of this general index are groups of national indices aggregated according to a harmonized classification conforming to the ESA (European System of Integrated Economic Accounts). For these groups, the price trends correspond to the trends noted by the national indices for the same classification field.

The field covered by the general index varies according to country: as regards the population concerned (specific income bracket, certain socio-professional categories or total households), the geographical areas used (capital, urban areas, country as a whole, etc.) or differences in treatment of expenditure on rent, health care, etc... Finally, there is no uniform method for seasonal adjustments.

A fixed base system is used in some countries, whereas in others a chain system is used (variable weightings). The reference years used at national level for the indices vary according to country. For ease of comparison, EUROSTAT has chosen 1980 as the common year for the presentation of these indices.

THE CALCULATION OF THE EUR-12 INDEX

The EUR-12 index as calculated by EUROSTAT is a weighted average of national price indices.

The weight used is the proportion of each country in the final consumption of households for EUR-12. The values of this consumption in national currency are converted into purchasing power standards (PPS); for this purpose the purchasing power parities of the G.D.P. are used.

Up to 1987 purchasing power parities are those which result from the 1980 enquiry, from 1988 onwards they are those from the 1985 enquiry. The index calculated is a chain index of the "Laspeyres" type with weights changing each year.

However, the weights are lagged by three years since the national accounts data needed become available only after three years.

For example: the weights used for 1988 are those of 1985, for 1987 those of 1984.

Moreover, national accounts data are often revised leading to revisions of the consumption weights. In order to avoid continuous modifications in the EUR-12 index for previous periods, EUROSTAT has decided to "Freeze" the weights which are used.

Thus the EUR-12 index will not be affected by revisions of the national accounts. However when Member States carry out major revisions in the price series for past years, EUR-12 data will be calculated using these new series.
