

Consumer price index

12 □ 1989 Monthly

PRICES: Increase of 0.4% in November; inflation rate for the EC will be about 5.5% in 1989 (1988: 4.4%).

An increase of 0.4% in November pushed the inflation rate for the Community as a whole up to 5.4% compared with November 1988.

The 0.4% increase in November was mainly due to substantial rises in Portugal (1.0%), Greece (0.9%) and the United Kingdom (0.9%).

Less significant rises were recorded in Denmark (0.5%) and Italy (0.4%), whereas small increases were reported from Germany, France, Spain and Luxemburg (all 0.2%).

The CPI remained unchanged in the Netherlands, and declined by 0.1% in Belgium.

The quarterly index for Ireland rose by 0.8% between mid-August and mid-November 1989, which corresponds to an increase of about 0.3% per month.

Based on data for the first eleven months, Eurostat estimates that the inflation rate for the Community will be about 5.5% in 1989 (December 1989 compared with December 1988).

This rate was 4.4% in 1988 and 3.4% in 1987.

The inflation rates for the EC member states for December 1989 compared with December 1988 are estimated as follows:

Netherlands	1.2%	Denmark	4.8%
Germany	3.0%	Italy	6.0%
Belgium	3.3%	Spain	7.0%
France	3.5%	United Kingdom	7.5%
Luxemburg	3.8%	Portugal	11.5%
Ireland	4.7%	Greece	14.0%

The corresponding rates for the United States and Japan can be estimated at 4.5% and 2.5% respectively.

GENERAL INDEX EXCLUDING TOBACCO

In the framework of the Commission's program "Europe against cancer" Eurostat regularly calculates and publishes an index excluding tobacco products. The aim of this index is to make clear to the public and the social partners the effects of adjustments in taxation on tobacco products which are foreseen in the program "Europe against cancer". See pages 8 and 9 in this bulletin.

EXPLANATORY NOTES

METHODOLOGY

The consumer price indices given here are the national indices which have different names in each country. As far as trends are concerned, the general index published by EUROSTAT always corresponds to the general index published by the country. The component items of this general index are groups of national indices aggregated according to a harmonized classification conforming to the ESA (European System of Integrated Economic Accounts). For these groups, the price trends correspond to the trends noted by the national indices for the same classification field. The field covered by the general index varies according to country: as regards the population concerned (specific income bracket, certain socio-professional categories or total households), the geographical areas used (capital, urban areas, country as a whole, etc.) or differences in treatments of expenditure on rent, health care, etc... Finally, there is no uniform method for seasonal adjustments. A fixed base system is used in some countries, whereas in others a chain system is used (variable weightings). The reference years used at national level for the indices vary according to country. For ease of comparison, EUROSTAT has chosen 1985 as the common year for the presentation of these indices.

THE CALCULATION OF THE EUR-12 INDEX

The Eur-12 index as calculated by EUROSTAT is a weighted average of national price indices. The weight used is the proportion of each country in the final consumption of households for EUR-12. The values of this consumption in national currency are converted into purchasing power standard (PPS); for this purpose the purchasing power parities of the G.D.P. are used. Up to 1987 purchasing power parities are those which result from the 1980 enquiry, from 1988 onwards they are those from the 1985 enquiry. The index calculated is a chain index of the "Laspeyres" type with weights changing each year. However, the weights are lagged by three years since the national accounts data needed become available only after three years. For example: the weights used for 1989 are those of 1986, for 1988 those of 1985. Moreover, national accounts data are often revised leading to revisions of the consumption weights. In order to avoid continuous modifications in the EUR-12 index for previous periods, EUROSTAT has decided to "freeze" the weights which are used. Thus the EUR-12 index will not be affected by revisions of the national accounts. However when Member States carry out major revisions in the price series for past years, EUR-12 data will be calculated using these new series.
