

CONSUMER PRICES IN THE EEC 1990
LES PRIX A LA CONSOMMATION DANS LA CEE 1990

Eurostat hat die Aufgabe, den Informationsbedarf der Kommission und aller am Aufbau des Binnenmarktes Beteiligten mit Hilfe des europäischen statistischen Systems zu decken.

Um der Öffentlichkeit die große Menge an verfügbaren Daten zugänglich zu machen und Benutzern die Orientierung zu erleichtern, werden zwei Arten von Publikationen angeboten: Statistische Dokumente und Veröffentlichungen.

Statistische Dokumente sind für den Fachmann konzipiert und enthalten das ausführliche Datenmaterial: Bezugsdaten, bei denen die Konzepte allgemein bekannt, standardisiert und wissenschaftlich fundiert sind. Diese Daten werden in einer sehr tiefen Gliederung dargeboten. Die Statistischen Dokumente wenden sich an Fachleute, die in der Lage sind, selbständig die benötigten Daten aus der Fülle des dargebotenen Materials auszuwählen. Diese Daten sind in gedruckter Form und/oder auf Diskette, Magnetband, CD-ROM verfügbar. Statistische Dokumente unterscheiden sich auch optisch von anderen Veröffentlichungen durch den mit einer stilisierten Graphik versehenen weißen Einband.

Die zweite Publikationsart, die Veröffentlichungen, wenden sich an eine ganz bestimmte Zielgruppe, wie zum Beispiel an den Bildungsbereich oder an Entscheidungsträger in Politik und Verwaltung. Sie enthalten ausgewählte und auf die Bedürfnisse einer Zielgruppe abgestellte und kommentierte Informationen. Eurostat übernimmt hier also eine Art Beraterrolle.

Für einen breiteren Benutzerkreis gibt Eurostat Jahrbücher und periodische Veröffentlichungen heraus. Diese enthalten statistische Ergebnisse für eine erste Analyse sowie Hinweise auf weiteres Datenmaterial für vertiefende Untersuchungen. Diese Veröffentlichungen werden in gedruckter Form und in Datenbanken angeboten, die in Menütechnik zugänglich sind.

Um Benutzern die Datensuche zu erleichtern, hat Eurostat Themenkreise, d. h. eine Untergliederung nach Sachgebieten, eingeführt. Daneben sind sowohl die Statistischen Dokumente als auch die Veröffentlichungen in bestimmte Reihen, wie zum Beispiel „Jahrbücher“, „Konjunktur“, „Methoden“, untergliedert, um den Zugriff auf die statistischen Informationen zu erleichtern.

Y. Franchet
Generaldirektor

It is Eurostat's responsibility to use the European statistical system to meet the requirements of the Commission and all parties involved in the development of the single market.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of this information, Eurostat has set up two main categories of document: statistical documents and publications.

The statistical document is aimed at specialists and provides the most complete sets of data: reference data where the methodology is well established, standardized, uniform and scientific. These data are presented in great detail. The statistical document is intended for experts who are capable of using their own means to seek out what they require. The information is provided on paper and/or on diskette, magnetic tape, CD-ROM. The white cover sheet bears a stylized motif which distinguishes the statistical document from other publications.

The publications proper tend to be compiled for a well-defined and targeted public, such as educational circles or political and administrative decision-makers. The information in these documents is selected, sorted and annotated to suit the target public. In this instance, therefore, Eurostat works in an advisory capacity.

Where the readership is wider and less well defined, Eurostat provides the information required for an initial analysis, such as yearbooks and periodicals which contain data permitting more in-depth studies. These publications are available on paper or in Videotext databases.

To help the user focus his research, Eurostat has created 'themes', i.e. a subject classification. The statistical documents and publications are listed by series: e.g. yearbooks, short-term trends or methodology in order to facilitate access to the statistical data.

Y. Franchet
Director-General

Pour établir, évaluer ou apprécier les différentes politiques communautaires, la Commission des Communautés européennes a besoin d'informations.

Eurostat a pour mission, à travers le système statistique européen, de répondre aux besoins de la Commission et de l'ensemble des personnes impliquées dans le développement du marché unique.

Pour mettre à la disposition de tous l'importante quantité de données accessibles et faire en sorte que chacun puisse s'orienter correctement dans cet ensemble, deux grandes catégories de documents ont été créées: les documents statistiques et les publications.

Le document statistique s'adresse aux spécialistes. Il fournit les données les plus complètes: données de référence où la méthodologie est bien connue, standardisée, normalisée et scientifique. Ces données sont présentées à un niveau très détaillé. Le document statistique est destiné aux experts capables de rechercher, par leurs propres moyens, les données requises. Les informations sont alors disponibles sur papier et/ou sur disquette, bande magnétique, CD-ROM. La couverture blanche ornée d'un graphisme stylisé démarque le document statistique des autres publications.

Les publications proprement dites peuvent, elles, être réalisées pour un public bien déterminé, ciblé, par exemple l'enseignement ou les décideurs politiques ou administratifs. Des informations sélectionnées, triées et commentées en fonction de ce public lui sont apportées. Eurostat joue, dès lors, le rôle de conseiller.

Dans le cas d'un public plus large, moins défini, Eurostat procure des éléments nécessaires à une première analyse, les annuaires et les périodiques, dans lesquels figurent les renseignements adéquats pour approfondir l'étude. Ces publications sont présentées sur papier ou dans des banques de données de type vidéotex.

Pour aider l'utilisateur à s'orienter dans ses recherches, Eurostat a créé les thèmes, c'est-à-dire une classification par sujet. Les documents statistiques et les publications sont répertoriés par série — par exemple, annuaire, conjoncture, méthodologie — afin de faciliter l'accès aux informations statistiques.

Introduction

Framework of price surveys

From 1988 to 1990, the Statistical Office of the European Communities (EUROSTAT), in conjunction with the statistical services of the Member Countries, carried out several surveys of prices of household consumer goods and services.

These surveys are a contribution to making volume comparisons of the main national accounts aggregates. The information on prices in this publication is only part of the basic documentation necessary to compare, on an annual basis, the volumes of gross domestic product (GDP) and its components.

For this yearly comparison and in particular for the final consumption of households, the timetable for the surveys between the beginning of 1988 and the end of 1990, was the following :

- Spring 1988 : food, beverages and tobacco ;
- Autumn 1988 : durable goods ;
- Spring 1989 : services ;
- Autumn 1989 : clothing, footwear, household textiles ;
- Spring 1990 : furniture, floor coverings, glassware, tableware and household utensils, including repairs

As can be seen, every year approximately one third of a basket that covers final consumption of households is the subject of a complete survey.

In this publication the results of the last survey of this cycle - "furniture, floor coverings, glassware, tableware and household utensils, including repairs" - that took place in the spring of 1990 covering a total of about 450 definitions are presented. Publications concerning the results of the previous surveys exist already, namely :

- "Consumer prices in the EEC - 1988" (released in 1990).
- "Consumer prices in the EEC - 1989" (released in 1991).

Eurostat intends to publish regularly the results of each survey as they become definitive. The consumer price surveys were prepared by Eurostat and the Member States' departments responsible for consumer price statistics under the auspices of the Working Party on "Price Statistics". Austria and Switzerland also took part in the Communities' exercise.

The survey took place in Vienna, Bern and in the capitals of 11 of the Member States. Exception was made for The Netherlands, for which, prices were collected in 4 cities : Amsterdam, Rotterdam, Den Haag and Utrecht.

Each price survey concerns a certain number of groups of products, called "basic headings".

These basic headings, in the classification by purpose of final consumption of households, are the smallest units to which values can be attributed. For the yearly comparison, Eurostat defined 214 basic headings consisting of similar and, as far as possible, homogeneous products.

For a given survey, a list of products is drawn up, based on the following general rules :

- . the list covers and is representative of the group of products concerned
- . in each basic heading products are selected so as to guarantee representativity of the consumption of each participating country

In "Purchasing Power Parities and Gross Domestic Product in Real Terms, Results 1985", there is a detailed description of the methods used

- to define a classification of the final consumption of households up to 214 basic consumption functions;
- to select products;
- to define products;
- to select sales points.

For the purposes of the yearly comparison, national average prices had to be obtained, and these were calculated as follows:

- an average price was calculated for the capital ⁽¹⁾ and the survey month on the basis of the prices collected;
- the monthly average price was converted to the annual average for the capital ⁽¹⁾ in 1990, using temporal coefficients regularly supplied by the countries ;
- the annual average price for the capital in 1990 was converted to the annual average price for 1990 for the country as a whole, using spacial coefficients supplied by the countries.

General rules taken into account in the publication.

Complete product definitions are not given (the products are given concise descriptions). When a product is defined by brand and model, the only detail given will be "SBM" (selected brand and model) or only "SB" (selected brand); here, the basic reason for not explicitly identifying the product is the overriding need for confidentiality.

When a product is not defined by "brand and model", the reader cannot, in the majority of cases, know the exact definition, because of the constraints of confidentiality and also for technical reasons connected with the amount of space that a detailed description would take up. In any case, it should be stressed that the definitions used for this category of goods and services are much more detailed, given that the aim is to record, in the various countries, prices of products which are absolutely comparable.

The unit to which the price corresponds is indicated with each definition. Thus, the price for a carpet of 1.8 m² to 2.0 m² is expressed for 1 m². As this example shows, the fact that the price of 1 m² of carpet is given does not mean that the record cannot refer to a carpet of 2.0 m², the price of which has been converted for the sake of a uniform presentation of 1 m² prices.

Another example concerns the unit in the case of repair services. The aim has been to present the results in a uniform way, and as some countries base their tariffs mainly on the time taken for each repair job, while others have fixed prices for a specific job and the time it takes may not be known, the option was to choose for unit "1 operation".

All prices refer to cash payments. Most often, the products are taken from the shop by the purchasers.

In all countries prices include taxes, both VAT and any others paid by the purchaser.

Prices of products on special offer or being sold at reduced prices should not be recorded. Permanent reductions are taken into account whenever they are known.

(1) With the exception of the Federal Republic of Germany, where for legal reasons all prices have been transmitted only as a national average; and The Netherlands, for which the prices transmitted are an average concerning 4 cities.

As a general rule, for all surveys, the number of price quotations is between 1 and 15 according to the definitions and according to the expected range of prices. In the case of this survey, for certain pieces of furniture defined by brand and model, a single quotation is in the majority of cases adequate, while for items like toothpaste or washing agents 15 quotations are required. For certain items like carpet laying services or cutting a duplicate key, prices vary considerably in all the capitals considered.

It should be remembered that the definitions taken as a whole do provide a statistical correction to the fuzziness of these prices and that groupings of price ratios give more precise results.

Sales points are selected by the national statistical offices in such a way that the sample selected is representative of the distribution in the capital city.

The tables of the publication.

The publication contains three parts, namely :

- 1) a first part which consists of the average prices in the capital cities (with the exceptions made earlier for the F.R.G and The Netherlands), with an indication of the reference period for the prices which varies according to the capital. The prices for each capital are shown in national currency. The unit in which the price is expressed is shown alongside each (brief) description. The definitions are identified by a continuous sequence of numbers from 1 to 438. For each group of products there is the title and code of the corresponding basic heading.
- 2) a second part that shows average prices for the year 1990, expressed in ECU, for the whole of each country. These are extrapolated from the average prices for the capitals with the help of spatial-temporal coefficients supplied by the countries, and converted to ECU using average 1990 exchange rates.
- 3) a third part contains price level indices for each of the 43 basic headings expressed in relation to the Community = 100.

These price indicators for the different countries, for each basic heading, have been drawn up on the basis of EKS parities, as calculated for the volume comparison (op.cit. Chapter IV-1).

The price level index for a given basic heading for a given country is obtained as the ratio multiplied by 100 of the price index of this basic heading for this country, and the price index of EUR12 for the same basic heading (thus, the price level index of EUR12 equals 100, for the mentioned basic heading).

To obtain the price index of each country for a given basic heading, we divide the corresponding basic heading parity by the exchange rate (1990 average).

For a given basic heading the EUR12 price index is computed as the weighted geometric average of the price indices of the 12 countries, using as weights the real shares of each country in the Community total, for the basic heading considered.

The resulting price level index, for basic heading "i", for country "j" (j=1,2,...,14) is as follows;

$$I_j^i = 100 \times \frac{\frac{\text{Ref } P_j^i}{\text{Ref } T_j}}{\prod_{\alpha=1}^{12} \left(\frac{\text{Ref } P_{\alpha}^i}{\text{Ref } T_{\alpha}} \right)^{w_{\alpha}^i}}, \quad j=1,2,\dots,14; i=1,2,\dots,m;$$

$$\sum_{\alpha=1}^{12} w_{\alpha}^i = 1$$

where:

- "m" is the number of basic headings;
- I_j^i is the price level index of country "j" for basic heading "i";
- $\text{Ref } P_j^i$ is the parity of the basic heading "i" for country "j" in relation to any reference country;
- $\text{Ref } T_j$ is the 1990 average exchange rate of the currency of country "j" vis-à-vis the currency of the same reference country ;
- w_{α}^i is the real share ⁽¹⁾ of country "α" in the Community total, for basic heading "i".

The price level index can be used for direct comparisons of price levels between different countries.

When, for a given country and a given basic heading, this index is above 100, the price level for this heading and this country is above the Community reference average.

(1) The real shares used in this publication are a result of the complete 1990 exercise (op. cit. Chapter V-3)

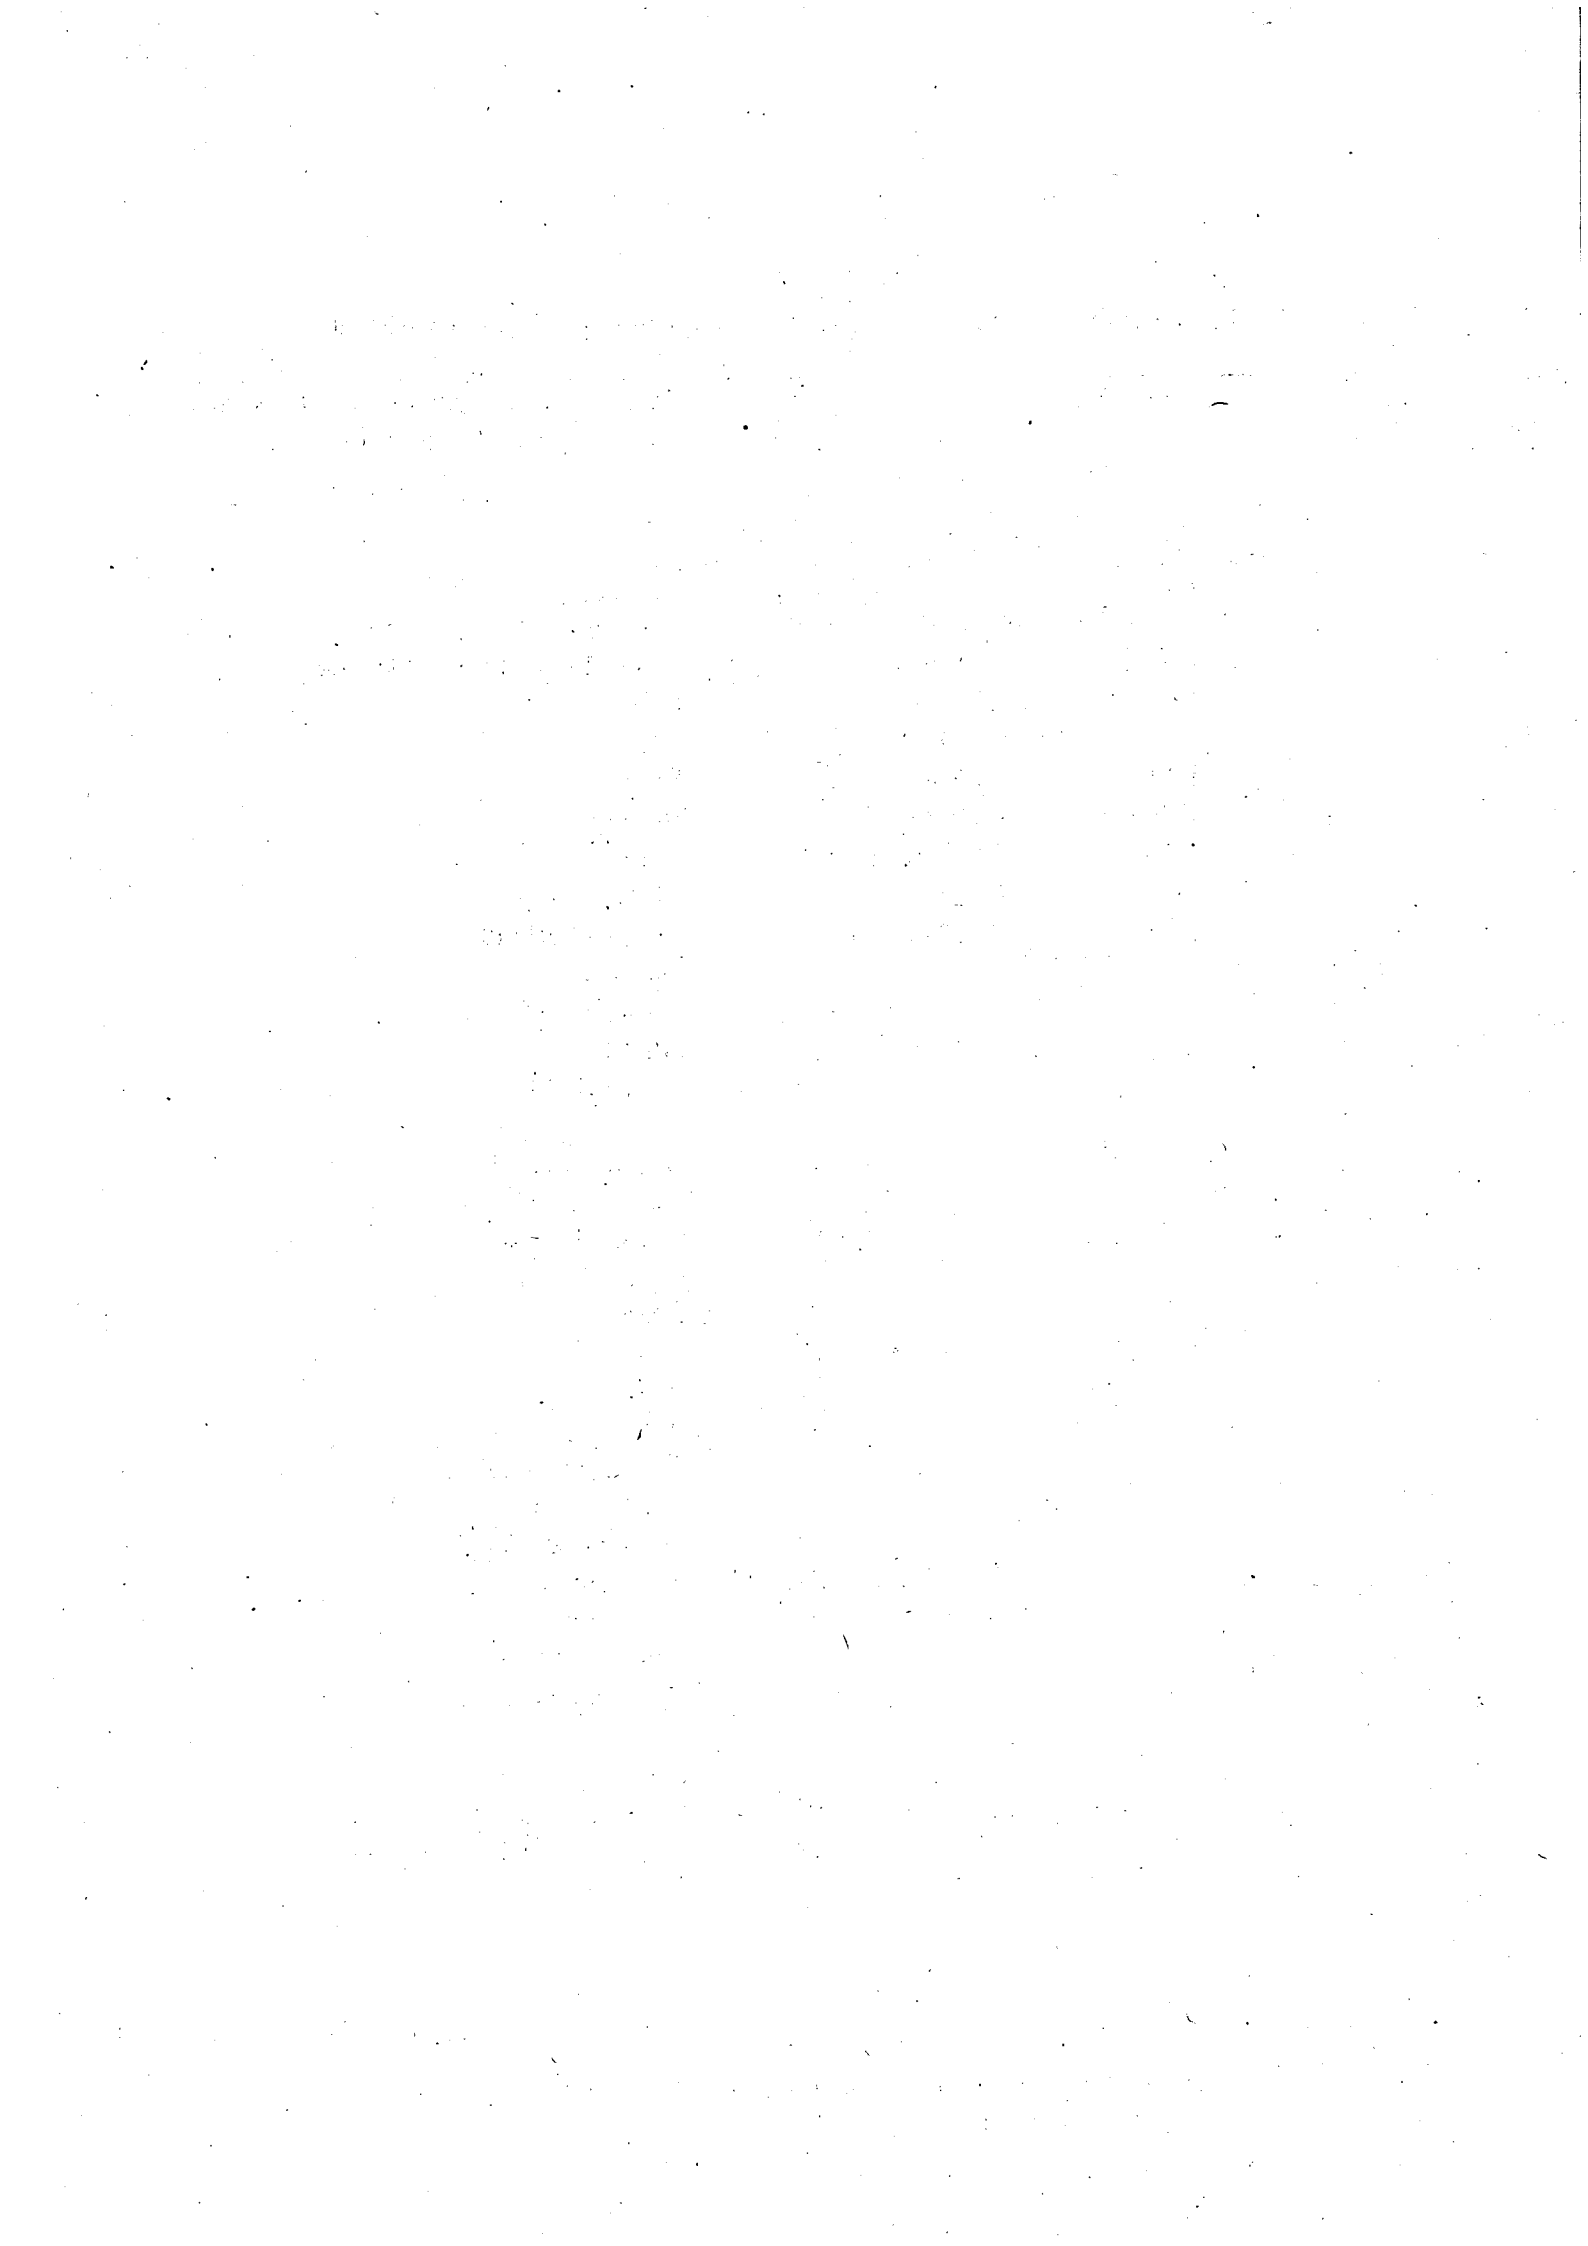

For the basic heading 1 in the classification, i.e. "Kitchen furniture" (cf part III), the price level can thus be seen to be highest in Denmark, (29% above the Community average) and lowest in Portugal (27 % below the Community average).

In other words, to buy the same volume of kitchen furniture, 129 currency units would have to be spent in Denmark as against only 73 in Portugal, i.e. 43% less in the latter country.

Relative price levels between countries can thus be deduced from a comparison of the price level index between the same countries. For example, comparison of price level indices of Denmark and Portugal ($129 : 73 = 1.77$) show that the level in Denmark is 1.77 times as high as in Portugal.

Introduction

Cadre des enquêtes de prix

Eurostat (Office Statistique des Communautés Européennes), en collaboration avec les services statistiques des pays membres, a effectué, entre 1988 et 1990, plusieurs enquêtes sur les prix des biens et services de la consommation des ménages.

Ces enquêtes s'insèrent dans le cadre de la comparaison en volume des principaux agrégats de la comptabilité nationale. Les informations sur les prix présentées dans cette publication constituent, en fait, seulement une partie de l'ensemble de la documentation de base utilisée pour faire, annuellement, les comparaisons en volume du produit intérieur brut (PIB) et de ses composantes.

Pour cette comparaison annuelle et notamment pour la consommation finale des ménages, le calendrier des enquêtes, entre le début de 1988 et la fin de 1990 a été le suivant :

Printemps 1988	: alimentation, boissons et tabac
Automne 1988	: biens durables
Printemps 1989	: services
Automne 1989	: habillement, chaussures, textiles de ménages
Printemps 1990	: meubles, revêtements de sol, matelas, linge de maison, verrerie, vaisselle et articles de ménage

On peut donc voir que, chaque année, à peu près un tiers d'un panier qui couvre la consommation finale de ménages fait l'objet d'une enquête complète.

Dans cette publication on présente les résultats de la dernière enquête de ce cycle - "meubles, revêtements de sol, matelas, linge de maison, verrerie, vaisselle et articles de ménage" - effectuée au printemps 1990 et qui a porté sur un ensemble d'environ 450 définitions.

Des publications concernant les résultats des enquêtes précédentes existent déjà, à savoir:

- "Les prix à la consommation dans la CEE - 1988" (mise en circulation en 1990)
- "Les prix à la consommation dans la CEE - 1989" (mise en circulation en 1991)

Eurostat envisage de publier, régulièrement, les résultats des autres enquêtes au fur et à mesure qu'ils deviennent définitifs.

Les enquêtes sur les prix à la consommation ont été préparées par Eurostat et par les services des pays membres compétents en matière de statistiques des prix à la consommation, au sein du groupe de travail "Statistiques des prix". L'Autriche et la Suisse ont également participé à l'exercice communautaire.

L'enquête a eu lieu à Vienne, Berne et dans les capitales de 11 des pays membres, à l'exception des Pays-Bas où les prix ont été relevés en 4 villes: Amsterdam, Rotterdam, Den Haag et Utrecht.

Chaque enquête de prix concerne un certain nombre de groupes de produits, appelés "positions élémentaires".

Ces positions élémentaires dans la classification par fonction de la consommation finale des ménages, constituent les plus petites unités auxquelles des valeurs peuvent être attribuées. Pour la comparaison annuelle, Eurostat a défini 214 positions élémentaires qui se composent de produits similaires et, dans la mesure du possible, homogènes.

Pour chaque enquête de prix, une liste de produits est établie, basée sur les règles générales suivantes :

- la liste couvre et est représentative du groupe de produits concerné
- à l'intérieur de chaque position élémentaire, les produits sont sélectionnés de façon à assurer la représentativité de la consommation de chaque pays participant.

Dans la publication "Parités de Pouvoir d'Achat et Produit Intérieur Brut Réel, Résultats 1985", le lecteur trouvera une description détaillée sur les techniques mises en oeuvre :

- pour définir une classification de la consommation finale des ménages jusqu'au niveau de 214 fonctions de consommation élémentaires ;
- pour sélectionner les produits ;
- pour définir les produits ;
- pour sélectionner les points de vente.

Pour les besoins de la comparaison annuelle, il a également fallu obtenir des prix moyens nationaux. Ceux-ci ont été calculés selon le schéma suivant :

- calcul d'un prix moyen pour la capitale ⁽¹⁾ et pour le mois d'enquête à partir des prix relevés ;
- passage du prix moyen d'un mois au prix moyen annuel pour la capitale ⁽¹⁾ en 1990, à l'aide des coefficients temporels qui sont régulièrement envoyés par les pays.
- passage du prix moyen annuel pour la capitale pour 1990 au prix moyen annuel 1990 pour l'ensemble du pays, à l'aide des coefficients spatiaux fournis par les pays.

Règles de caractère général prises en compte dans la publication.

Les définitions complètes des produits ne sont pas fournies (les produits sont indiqués de façon sommaire ici). C'est ainsi que, systématiquement, lorsqu'un produit est défini par une marque et un modèle, on trouvera uniquement la précision "MMS" (marque et modèle sélectionnés) ou seulement "MS" (Marque sélectionnée). Dans ce cas, c'est essentiellement pour une raison impérative de confidentialité que le produit n'est pas identifié de façon explicite.

Lorsqu'il s'agit d'un produit qui n'est pas défini avec des références "marque et modèle", il n'est pas possible pour le lecteur de connaître la définition exacte, dans la majorité des cas. Cela s'explique par des contraintes de confidentialité et aussi par des raisons techniques liées à la place que prendrait la description exhaustive du produit. En tout cas, il faut signaler que les définitions utilisées pour cette classe de biens et services, sont beaucoup plus détaillées, une fois que le but est de relever, dans les différents pays, des prix pour des produits qui sont absolument comparables.

L'unité dans laquelle le prix a été exprimé est indiquée au niveau de chaque définition. C'est ainsi que le prix d'un tapis de 1.8 m² à 2.4 m² est exprimé pour 1 m².

Comme on le constate par cet exemple même, le fait d'indiquer le prix pour 1 m² de tapis n'exclut pas qu'il puisse s'agir d'une observation pour un tapis de 2.0 m² dont le prix a été converti, pour le ramener dans une présentation uniforme de prix à 1 m².

Un autre exemple en ce qui concerne l'unité dans le cas des services de réparation. On s'est efforcé de présenter les résultats d'une façon homogène et comme certains pays basent leurs tarifications surtout en fonction du temps consacré à chaque réparation alors que d'autres ne peuvent observer que des prix pour une réparation bien précise et la durée est inconnue ou mal connue, on a fait l'option de choisir comme unité "1 operation".

(1) A l'exception de la République Fédérale d'Allemagne, où, pour des raisons juridiques tous les prix ont été transmis uniquement comme moyenne nationale et les Pays-Bas où les prix transmis sont une moyenne pour 4 villes.

Tous le prix correspondent à des produits payés intégralement au moment de l'achat. Le plus souvent, les produits sont pris par l'acheteur dans le magasin.

Les prix sont, dans tous les pays, des prix taxes comprises, qu'il s'agisse de la TVA ou de toutes autres taxes à la charge de l'acheteur.

Les prix des produits en offre spéciale ou en solde ne doivent pas être enregistrés. Chaque fois que des rabais permanents peuvent être connus, ils sont pris en compte.

Comme règle générale, pour toutes les enquêtes, le nombre de relevés de prix par produit varie entre 1 et 15, en fonction des définitions et de la variabilité attendue des prix à observer. Dans le cas de cette enquête, pour certains meubles définis par marque et modèle, un seul relevé est dans la plupart des cas suffisant, tandis que pour d'autres produits comme de la pâte dentifrice où les détergents, on exige 15 observations. Pour certains produits, la variabilité des prix est considérable dans toutes les capitales considérées.

Il faut savoir que ces incertitudes sur le montant exact de ces prix se compensent statistiquement au niveau de l'ensemble des définitions mises en oeuvre et que le degré de précision est meilleur au niveau des regroupements des rapports de prix.

Les points de vente sont sélectionnés par les services nationaux de telle sorte que l'échantillon sélectionné soit représentatif de la distribution dans la capitale du pays.

Les tableaux de la publication

La publication contient trois parties, à savoir :

- 1) une première partie qui consiste aux prix moyens dans les capitales (avec les exceptions mentionnées avant pour la R.F.A et pour les Pays-Bas), avec l'indication de la période d'observation des prix, laquelle varie selon la capitale. Les prix de chaque capitale sont exprimés dans la monnaie du pays. A côté de chaque définition (dont on ne donne qu'une indication sommaire) se trouve l'unité dans laquelle est exprimé le prix. Les définitions sont repérées dans cette publication par un numéro d'ordre continu qui va de 1 à 438. Pour chaque groupe de produits, il y a le titre et le code de la position élémentaire correspondante.
- 2) une deuxième partie qui présente les prix moyens de l'année 1990, exprimés en ECU, pour l'ensemble du territoire de chaque pays. Ces prix sont extrapolés à partir des prix moyens des capitales, à l'aide des coefficients spatiaux-temporels fournis par les pays, et convertis en ECU en utilisant les taux de change moyens de 1990.
- 3) une troisième partie qui contient les indices de niveau de prix pour chacune des 43 positions élémentaires exprimés par rapport à la Communauté = 100.

Ces indicateurs de prix pour les différents pays, pour chaque position élémentaire, ont été établis en partant des parités EKS, telles qu'elles ont été calculées pour la comparaison en volume (voir chapitre IV-1 de la publication mentionnée).

L'indice de niveau de prix pour une position élémentaire et un pays donné, est obtenu comme le rapport multiplié par 100, entre l'indice de prix de cette position pour ce pays, et l'indice de prix pour EUR12 pour la même position élémentaire (ainsi, l'indice de niveau de prix de EUR12 est égal à 100, pour la position élémentaire citée).

Pour obtenir l'indice de prix de chaque pays pour une position élémentaire donnée, on divise la parité correspondante de la position élémentaire par le taux de change (moyenne 1990).

Pour une position élémentaire donnée l'indice de prix de EUR12, est calculé comme la moyenne géométrique pondérée des indices des 12 pays, en utilisant comme poids les parts réelles de chaque pays dans le total Communautaire, pour la position élémentaire considérée.

L'indice de niveau de prix qui en résulte, pour une position élémentaire "i" et pour un pays "j" (j=1,2,...,14), a l'expression suivante:

$$I_j^i = 100 \times \frac{\frac{\text{Ref } P_j^i}{\text{Ref } T_j}}{\prod_{\alpha=1}^{12} \left(\frac{\text{Ref } P_{\alpha}^i}{\text{Ref } T_{\alpha}} \right)^{w_{\alpha}^i}}, \quad j=1,2,\dots,14 ; i=1,2,\dots,m ;$$

$$\sum_{\alpha=1}^{12} w_{\alpha}^i = 1$$

où :

- "m" est le nombre de positions élémentaires ;
- I_j^i est l'indicateur de niveau de prix du pays "j" pour la fonction de consommation élémentaire "i";
- $\text{Ref } P_j^i$ est la parité de la position élémentaire "i" pour le pays "j" par rapport à un pays de référence quelconque ;
- $\text{Ref } T_j$ est le taux de change -moyenne 1990- de la monnaie du pays "j" vers l'unité monétaire du même pays de référence ;
- w_{α}^i est la part réelle ⁽¹⁾ du pays "α" dans le total Communautaire, pour la position élémentaire "i".

(1) Les parts réelles utilisées dans cette publication sont un résultat de l'exercice complet 1990 (op.cit.Chapter V-3).

L'indice de niveau de prix permet de comparer directement le niveau de prix entre les différents pays.

Lorsque cet indice, pour un pays donné et pour une position élémentaire donnée, est supérieur à 100, cela signifie que le niveau de prix de cette position pour ce pays est supérieur à la moyenne communautaire de référence.

Pour la position élémentaire 1 de la classification, c'est-à-dire la position "Meubles de cuisine" (Cf. partie III), il résulte ainsi que le niveau de prix est le plus élevé au Danemark, (29% au-dessus de la moyenne Communautaire) et le plus bas au Portugal (27% au-dessous de la moyenne communautaire).

Exprimé d'une autre façon, on pourrait aussi dire que pour obtenir le même volume de meubles de cuisine, il faudrait dépenser 129 unités monétaires au Danemark contre seulement 73 au Portugal, c'est-à-dire 43% de moins dans ce dernier pays.

La comparaison de l'indice de niveau de prix entre les pays permet donc également de déduire les niveaux de prix relatifs entre les pays mêmes. Par exemple, le rapport des indices de niveau de prix entre le Danemark et le Portugal ($129 : 73 = 1.77$) montre un niveau 1.77 fois plus élevé au Danemark qu'au Portugal.

Consumer prices in the EEC 1990
Les prix à la consommation dans la CEE 1990

Luxembourg: Office des publications officielles des Communautés européennes

1992 — 131 p. — 21,0 × 29,7 cm

Theme 2: Economy and finance (violet covers)
Series D: Studies and analyses
Thème 2 : Économie et finances (couverture violette)
Série D : Études et analyses

ISBN 92-826-4185-6

Price (excluding VAT) in Luxembourg • Prix au Luxembourg, TVA exclue

ECU 15

This publication gives the main results of the survey of consumer prices in the European Community (as well as in Austria and Switzerland) in 1990, for 'Furniture, glassware, tableware ...', a group belonging to the final consumption of households.

The first part sets out average prices, expressed in national currency for the capital city of each country, for the period during which the prices were recorded.

The second part lists the average national prices for 1990 expressed in ecus.

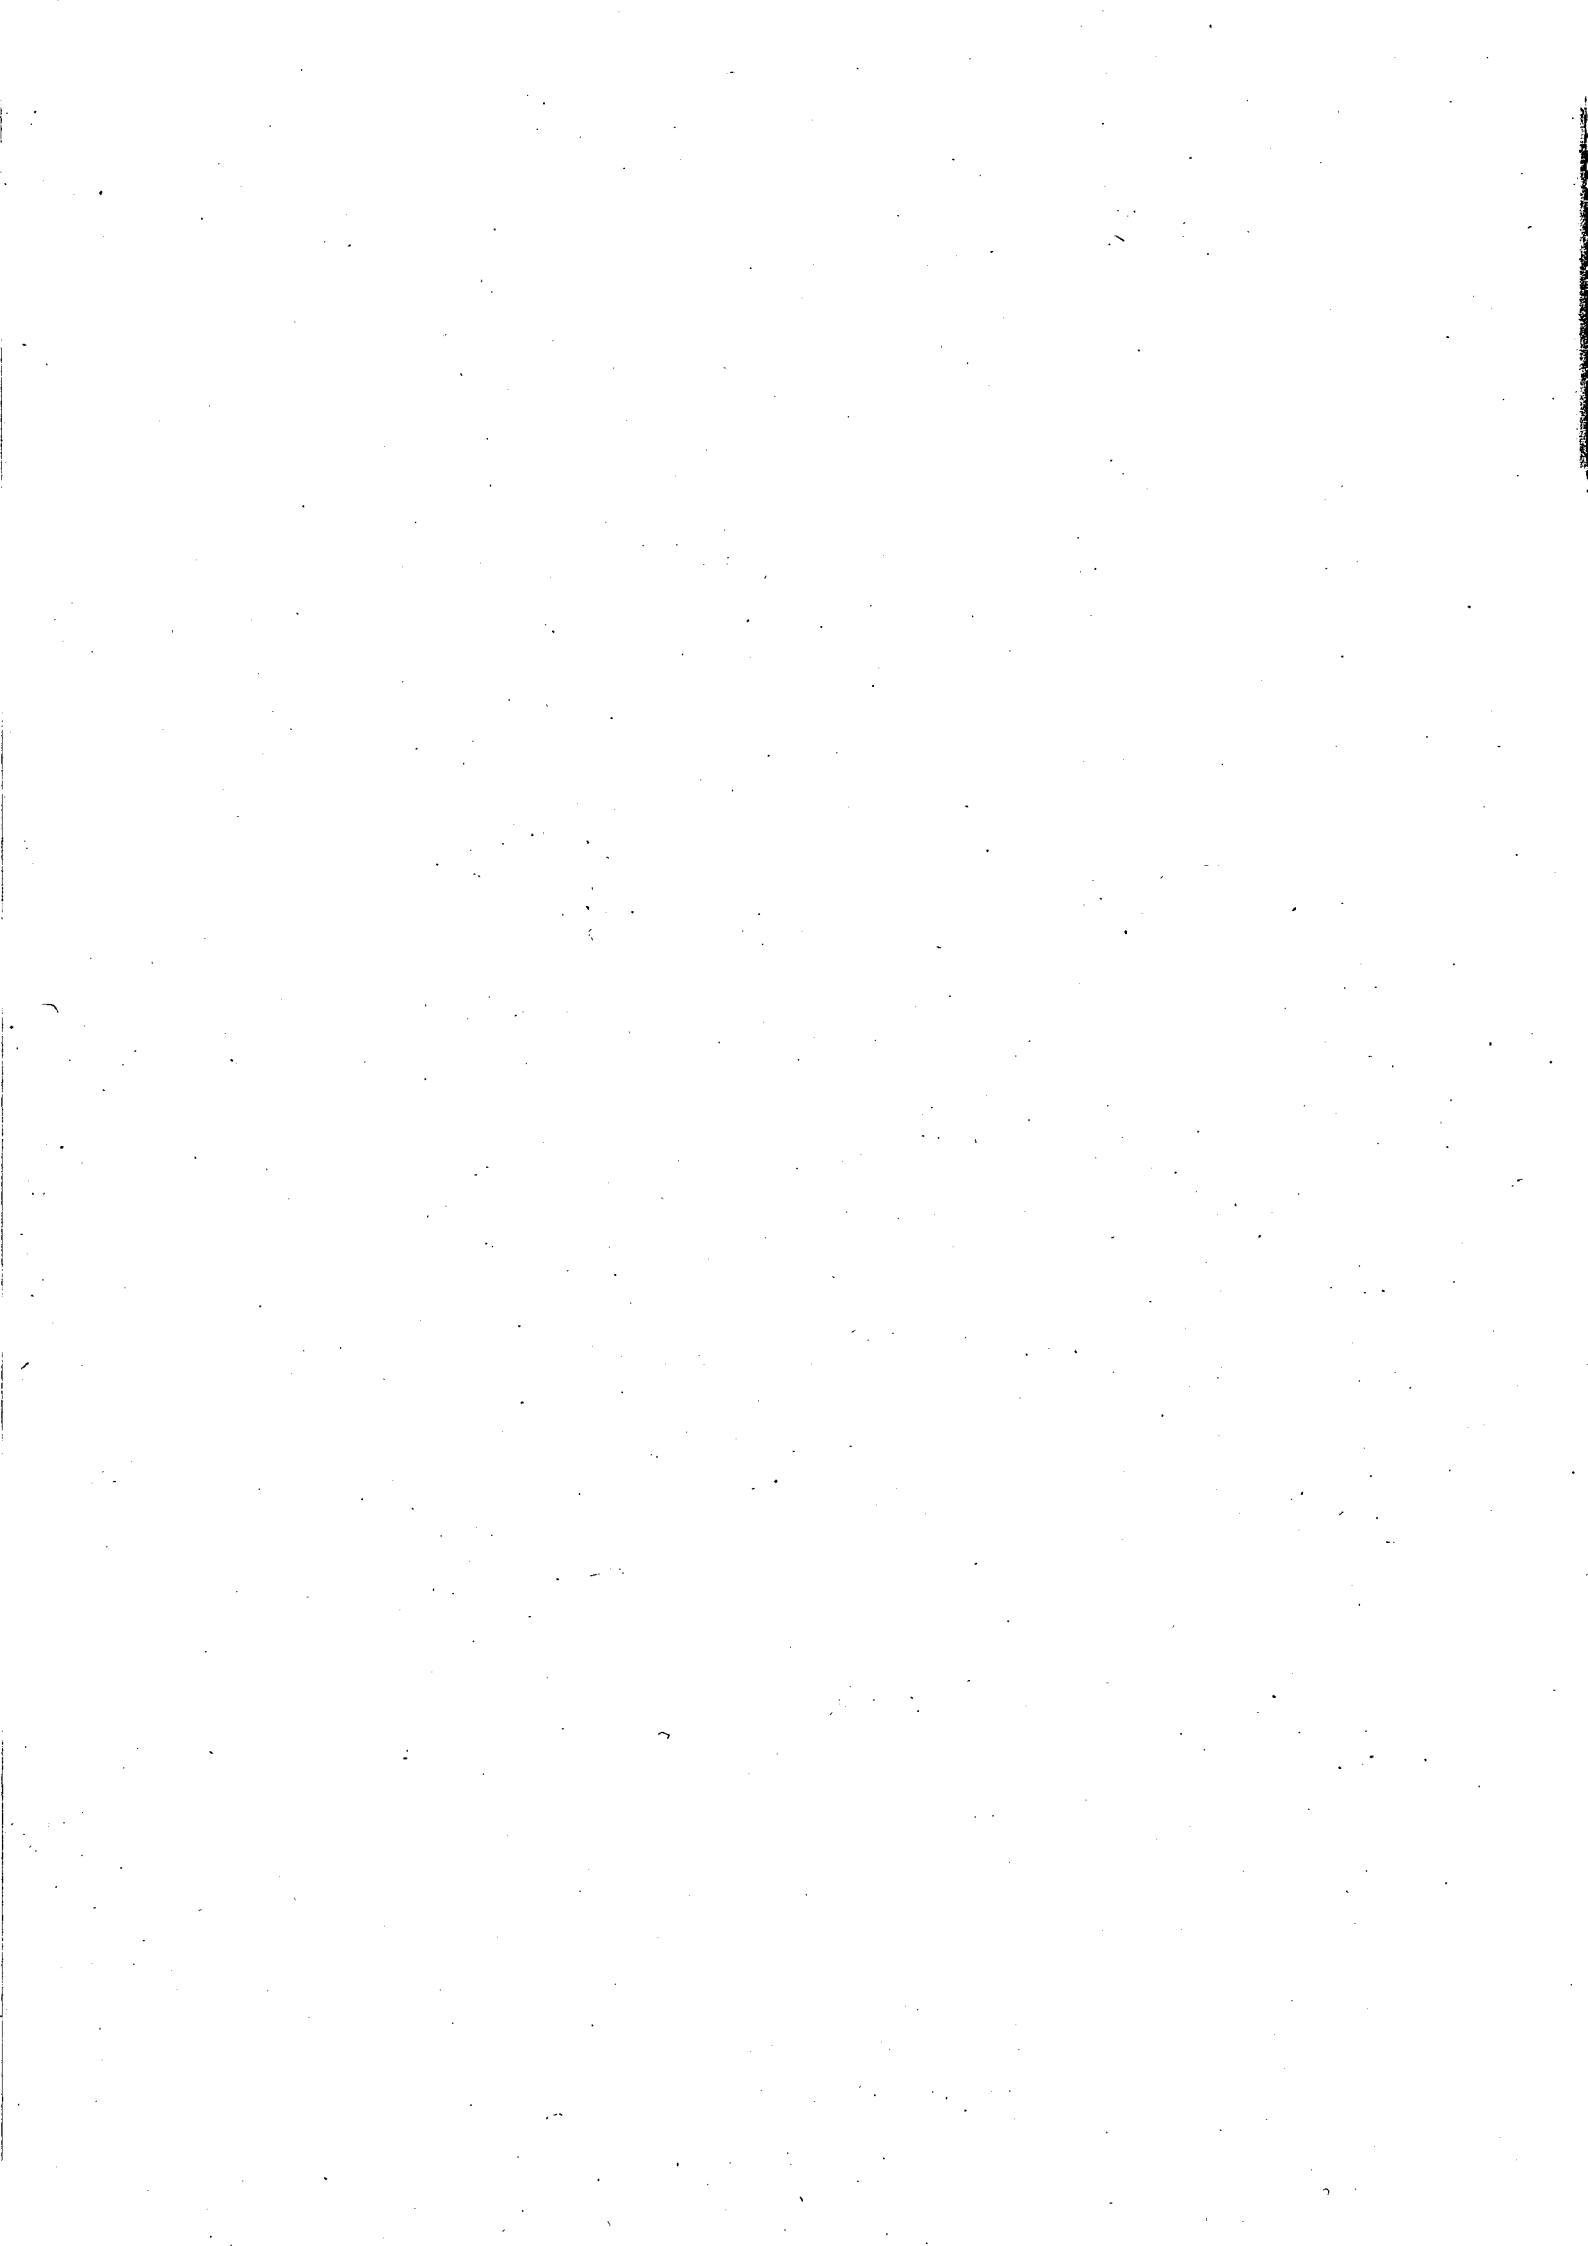

The third part presents for each country price-level indices (EUR 12 = 100) for each basic heading of consumption.

Cette publication présente les principaux résultats de l'enquête sur les prix à la consommation en 1990 dans la Communauté européenne (ainsi qu'en Autriche et en Suisse) pour le groupe « Meubles, verrerie, vaisselle ... », qui fait partie de la consommation finale des ménages.

Dans la première partie, on présente les prix moyens en monnaie nationale pour les capitales des pays et pour la période de relevé des prix.

Dans la deuxième partie, on présente les prix moyens nationaux pour 1990 exprimés en ECU.

Dans la troisième partie, on présente, pour chaque pays, des indices de niveau de prix (EUR 12 = 100) pour chaque position élémentaire de la consommation.
