Introducción

Eurostat presenta en este número los resultados detallados de la encuesta de las fuerzas de trabajo de la Comunidad de 1989, realizada en la Comunidad según lo dispuesto en el Reglamento (CEE) nº 3473/88 del Consejo, de 7 de noviembre de 1988.

A lo largo de los años, esta encuesta se ha convertido en una rica e importante fuente de datos para las estadísticas de las fuerzas de trabajo. La encuesta de las fuerzas de trabajo de la Comunidad es única en su género, debido al empleo de contenidos y definiciones comunes para todos los Estados miembros, y es objeto de una utilización intensiva con el fin de satisfacer las necesidades de estadísticas del mercado laboral que se precisan para la elaboración de las políticas comunitarias de desarrollo social y regional.

La encuesta de 1989 forma parte de la serie actual de encuestas anuales que se realizan desde 1983. En principio, el formato de dicha serie permanecerá sin modificar hasta 1991. A partir de 1992 se llevará a cabo una revisión en profundidad de la encuesta en el marco del programa estadístico de las Comunidades Europeas 1989–1992. La nueva serie incluirá una ampliación de los contenidos de la encuesta que permitirá satisfacer las variaciones de las necesidades de estadísticas, así como una serie de mejoras referidas a la calidad y la fiabilidad de los datos tanto en el ámbito regional como nacional.

La encuesta de las fuerzas de trabajo de la Comunidad se realiza teniendo en cuenta las directrices de la Oficina Internacional del Trabajo para este tipo de estadísticas, adoptadas en la 13 Conferencia Internacional de Estadísticas Laborales, celebrada en 1982. Por tanto, se ajusta a normas acordadas y aceptadas internacionalmente.

Podrá encontrarse más información sobre el contenido y las características metodológicas de los sondeos en la publicación «Encuesta de las fuerzas de trabajo: métodos y definiciones, 1988».

Expresamos nuestro agradecimiento a todos los expertos de los institutos nacionales de estadística que dirigieron las encuestas en cada Estado miembro y que proporcionaron a Eurostat los datos básicos de acuerdo con las necesidades de la Comunidad. La elaboración de los resultados que aquí se presentan corrió a cargo de la División «Empleo y desempleo» de la Oficina Estadística de las Comunidades Europeas.

| 83 | Duración del paro (1 000) | 210 |
| 84 | Duración del paro (%) | 212 |

Notas explicativas

Organización de la encuesta

La Oficina Estadística de las Comunidades Europeas (Eurostat), junto con los expertos nacionales de los Estados miembros, fijan el contenido de la encuesta y aportan una descripción detallada según un código común.

El artículo 4 del reglamento (CEE) nº 3473/88 del Consejo, que constituyó la base jurídica de la encuesta 1989, incluye una presentación resumida del tipo de información que cubre la encuesta.

Los institutos nacionales de estadística se encargan de seleccionar la muestra, preparar los cuestionarios, dirigir las encuestas directas a los hogares y remitir los resultados a Eurostat de acuerdo con el código normalizado.

Eurostat determina el programa de análisis de resultados y se encarga de elaborar y difundir la información remitida por los institutos nacionales.

La publicación «Encuesta de las fuerzas de trabajo: métodos y definiciones» presenta una descripción detallada de los métodos de muestreo, los procedimientos de ajuste, las definiciones y el código comunitario común utilizado actualmente en la encuesta de las fuerzas de trabajo.

Período de referencia

Las características individuales de todas las personas encuestadas se refieren a su situación laboral en una semana de referencia determinada.

Por regla general, la semana de referencia debe ser una semana normal de primavera, excluyendo los días festivos. Para los países que utilizan una semana fija (como hace, por ejemplo, Italia) esta condición es de fácil cumplimiento. En algunos países, sin embargo, la semana de referencia es la precedente a la semana de la encuesta, y dado que ésta se prolonga durante un período de tiempo, se utiliza el método de la semana de referencia móvil. En este caso se puede garantizar que la semana de referencia represente una semana normal.

Para la encuesta de 1989, las semanas de referencia se distribuyeron dentro de los períodos siguientes:

| | |
|------------------|-------------|
| Bélgica | abril |
| Dinamarca | marzo-abril |
| R.F. de Alemania | abril |
| Grecia | abril-junio |
| España | marzo-junio |
| Francia | marzo |
| Irlanda | abril-mayo |
| Italia | abril |
| Luxemburgo | mayo |
| Países Bajos | enero-mayo |

Portugal
Reino Unido

enero y abril
marzo-mayo

Campo de la encuesta

La encuesta está proyectada para cubrir la totalidad de la población residente, es decir, todas las personas cuyo lugar habitual de residencia se encuentra en el territorio de los Estados miembros de la Comunidad.

Sin embargo, por razones técnicas y metodológicas, no es posible incluir en todos los países a la población que reside en hogares colectivos, es decir, a las personas que viven en residencias, internados, hospitales, instituciones religiosas, residencias para trabajadores, etc.

Por consiguiente, con el fin de armonizar el campo de la encuesta, los resultados de la Comunidad se compilan únicamente sobre la base de la población en unidades domésticas privadas. Esto incluye todas las personas que residen en el hogar encuestadas durante la semana de referencia. Esta definición también incluye a los miembros ausentes del hogar por períodos cortos debido a estudios, vacaciones, enfermedad, viajes profesionales, etc.

Los tamaños muestrales se fijaron de acuerdo con las recomendaciones del artículo 3 del citado reglamento, siendo las cifras de hogares privados que participaron en cada país en la encuesta de 1989 las siguientes:

| | |
|------------------|---------|
| Bélgica | 31 780 |
| Dinamarca | 16 280 |
| R.F. de Alemania | 95 341 |
| Grecia | 48 638 |
| España | 58 207 |
| Francia | 65 417 |
| Irlanda | 45 393 |
| Italia | 140 749 |
| Luxemburgo | 9 265 |
| Países Bajos | 30 467 |
| Portugal | 26 688 |
| Reino Unido | 65 274 |

Fiabilidad de los resultados

Error de muestreo

Como en todas las encuestas por sondeo, los resultados de la encuesta de las fuerzas de trabajo están sujetos a errores de muestreo. Es prácticamente seguro que, de haberse realizado un censo completo utilizando los mismos cuestionarios, entrevistadores, supervisores, técnicas de tratamiento de datos, etc., que los empleados en la encuesta, se habrían obtenido datos ligeramente distintos. Esta diferencia se denomina error de muestreo de la estimación.

La magnitud relativa del error de muestreo se puede atribuir, fundamentalmente, a dos factores: el tamaño de la estimación

y la uniformidad con que ésta se distribuye entre la población. De dos estimaciones, lo más probable es que la mayor tenga un error de muestreo porcentual menor, mientras que de dos estimaciones de tamaño similar la que se refiere a una característica distribuida más uniformemente en la población estará, en general, sujeta a menor variabilidad relativa de muestreo.

En la presente publicación se han sustituido por «» los resultados que pueden tener márgenes muy amplios de variabilidad relativa de muestreo, en tanto que otras estimaciones relativamente imprecisas figuran entre paréntesis.

El coeficiente de variación de una estimación puede proporcionar un indicio del error de muestreo porcentual. Eurostat ha solicitado de los Estados miembros que calculen el coeficiente de variación de algunas variables básicas por sexo y edad (asalariados por grupo industrial amplio, parados, tasas de desempleo, tasas de población activa y de actividad). Las respuestas recibidas indican que, por lo que respecta a las variables citadas, la encuesta de las fuerzas de trabajo suministra resultados fiables a escala nacional.

Respuesta a la encuesta

Una causa importante de errores ajenos al muestreo en la encuesta de las fuerzas de trabajo es el efecto de la falta de respuesta sobre los resultados. Las tasas de falta de respuesta oscilaron por lo general entre el 5 y el 19 % aproximadamente, girando en torno al 6 % en la mayoría de los Estados miembros. En la mayoría de los países se corrigió la falta de respuesta mediante una nueva ponderación de los resultados, aunque en algunos casos el método empleado fue la «duplicación» o «sustitución» de las unidades. Los controles cualitativos llevados a cabo en diversos países sugieren una posible subrepresentación de los hogares de una sola persona, ya que éstos suelen ser más difíciles de contactar que los compuestos por varias personas.

Ponderación

Los resultados de la encuesta de 1989 se ponderaron con respecto a estimaciones de población establecidas de forma independiente relativas a diversas categorías de edad, sexo, región, nacionalidad, etc. Podrá encontrarse más información sobre los procedimientos de corrección y ponderación en «Encuesta de las fuerzas de trabajo: métodos y definiciones».

Conceptos y definiciones básicas

Las *personas con empleo* son aquellas que durante la semana de referencia realizaban un trabajo remunerado o con beneficios, o que no estaban trabajando pero tenían un empleo del que se encontraban temporalmente ausentes. Se incluye a los trabajadores familiares, pero se excluye a las personas despedidas.

Los *parados* son aquellas personas que, durante el período de referencia, no tenían un empleo y:

- a) estaban buscando un empleo remunerado y se hallaban disponibles para comenzar a trabajar de inmediato, o
- b) estaban proyectando establecer un negocio propio o dedicarse al ejercicio de una profesión, o
- c) estaban esperando ser readmitidos en un empleo del que se les había despedido, o
- d) habían encontrado un empleo en el que iban a comenzar después de la semana de referencia.

La *fuerza de trabajo* se define como el conjunto de personas con empleo y parados. Es sinónimo de «población activa».

Las *personas inactivas* son aquellas que no están clasificadas como empleadas o parados.

Estas definiciones se refieren a la población en edad laboral (14 años o más).

Las *tasas de actividad* representan el porcentaje de la fuerza de trabajo sobre la población en edad laboral que reside en hogares privados.

Las *correlaciones empleo/población* representan el porcentaje de las personas con empleo sobre la población en edad laboral que reside en hogares privados.

Las *tasas de paro* representan el porcentaje de las personas en paro sobre las fuerzas de trabajo.

Las tasas mencionadas normalmente se calculan por grupos de edad y sexo, y algunas veces se efectúan también clasificaciones cruzadas con respecto a otras variables demográficas, tales como estado civil o nacionalidad.

Por *duración del paro* se entiende:

- a) la duración de la búsqueda de empleo, o
- b) el tiempo transcurrido desde el último empleo (en el caso de que sea un período más breve que el de la búsqueda de empleo).

Estas definiciones y conceptos se explican detalladamente en la publicación «Encuesta de las fuerzas de trabajo: métodos y definiciones».

Comparabilidad con encuestas anteriores

Los conceptos y definiciones utilizados en la serie actual de encuestas se introdujeron en 1983 y se basaban en las recomendaciones de la Oficina Internacional del Trabajo. Ha sido posible comparar los resultados de las encuestas anuales entre sí debido a que se han seguido aplicando dichos conceptos. Por otra parte, existe la posibilidad de comparar los datos obtenidos con los datos referidos a los países no comunitarios que aplican las mismas definiciones, fruto de un acuerdo internacional. Sin embargo, tras la revisión efectuada en 1983, los resultados de las actuales encuestas de las fuerzas de trabajo de la Comunidad no podrán compararse con los obtenidos en las encuestas anteriores a 1983.

En la publicación de los resultados de la encuesta de 1983 se describen los distintos cambios de definición y se da una evaluación de los efectos cuantitativos de estos cambios entre 1981 y 1983.

Observaciones específicas sobre la encuesta de 1989

Dado que los cuestionarios individuales están diseñados por los servicios nacionales de estadística con el fin de cubrir los requisitos tanto nacionales como comunitarios, el paso de los cuestionarios nacionales al código de la Comunidad exige un complejo programa de conversión específico para cada país. A pesar de que Eurostat y los Estados miembros han procurado superar estas dificultades técnicas para alcanzar un máximo de armonización, las diferencias en las prácticas nacionales y en la legislación laboral, junto con particularidades demográficas y el entorno social y político, conducen inevitablemente a excepciones y peculiaridades en algunos países.

DINAMARCA

Debido a la utilización del método de selección de muestras basado en la unidad familiar, el puesto de «cabeza de familia» se asigna normalmente a la mujer, considerándose al varón como «cónyuge».

R.F. de ALEMANIA

El incremento en la población de «No nacionales» procedentes de países fuera de la Comunidad no incluye ninguna entrada de ciudadanos de la RDA, dado que no se distinguen por nacionalidad.

GRECIA

La cifra relativamente baja de paro registrado que se da en Grecia se debe al sistema especial de subsidio de desempleo que existe en este país.

ITALIA

- a) No se dispone de datos relativos a los extranjeros residentes en Italia.

- b) El número relativamente elevado de personas que buscan un primer empleo refleja la convención y la práctica de la estabilidad de empleo en el mercado de trabajo italiano. La contrapartida a esta cifra elevada es el número relativamente bajo de parados que buscan un trabajo tras haber perdido su empleo.

REINO UNIDO

- a) El concepto de trabajador familiar no existe en el Reino Unido.
- b) Se cuentan como parados registrados las personas que han solicitado el subsidio de desempleo. No se dispone de datos del número de beneficiarios.
- c) El aparente descenso de población extranjera entre 1988 y 1989 se debe a un cambio en la definición de la subdivisión «Otros británicos», los anteriormente incluidos en la categoría «Paises no comunitarios» se incluyen desde 1989 en la categoría «Nacionales».

Vorwort

Eurostat legt in diesem Band die ausführlichen Ergebnisse der Erhebung über Arbeitskräfte vor, die 1989 auf der Grundlage der Verordnung (EWG) Nr. 3473/88 des Rates vom 7. November 1988 in der Gemeinschaft durchgeführt worden ist.

DE

Im Laufe der Jahre ist die genannte Erhebung zu einer wichtigen und umfangreichen Quelle statistischer Daten über Arbeitskräfte entwickelt worden. Die Erhebung über Arbeitskräfte (EAK) der Gemeinschaft ist deshalb eine Besonderheit, weil gemeinsame Merkmale und Definitionen für alle Mitgliedstaaten verwendet werden. Daher werden die Ergebnisse in großem Umfang genutzt, um den Bedarf hinsichtlich statistischer Daten über den Arbeitsmarkt für die soziale und regionale Entwicklungspolitik der Gemeinschaft zu decken.

Die Erhebung von 1989 gehört zu der laufenden Reihe jährlich durchgeföhrter Erhebungen, mit der 1983 begonnen wurde. Diese Reihe soll im wesentlichen in unveränderter Form bis 1991 fortgesetzt werden. Im Rahmen des statistischen Programms der Europäischen Gemeinschaften 1989–1992 ist für 1992 eine grundlegende Überarbeitung der Erhebung vorgesehen. Bei der neuen Reihe sollen dem Wandel des Statistikbedarfs durch eine inhaltliche Erweiterung der Erhebung Rechnung getragen und die Qualität und Zuverlässigkeit der Daten sowohl auf nationaler als auch auf regionaler Ebene verbessert werden.

Bei der Durchführung der Arbeitskräfteerhebung in der Gemeinschaft werden die Leitlinien des Internationalen Arbeitsamtes für die Arbeitskräftestatistik berücksichtigt, die auf der 13. Internationalen Konferenz der Arbeitsstatistiker im Jahre 1982 angenommen wurden und die daher international vereinbarten und akzeptierten Normen entsprechen.

Informationen über den Inhalt und die methodischen Merkmale der Erhebungen sind in der Veröffentlichung „Erhebung über Arbeitskräfte – Methodik und Definitionen, 1988“ enthalten.

Unser Dank gilt allen Sachverständigen der statistischen Dienste der Mitgliedstaaten, die für die Durchführung der Erhebung in den einzelnen Mitgliedstaaten und für die Übermittlung der Grunddaten entsprechend den Erfordernissen der Gemeinschaft zuständig waren. Für die Aufbereitung der hier vorgelegten Ergebnisse war die Abteilung „Beschäftigung und Arbeitslosigkeit“ des Statistischen Amtes der Europäischen Gemeinschaften verantwortlich.

| 65 Wichtigste Merkmale der jugendlichen Arbeitslosen und sonstigen jugendlichen Arbeitsuchenden 14 bis 24 Jahre (%) | 176 |
| 66 Arbeitslose nach dem Verwandtschaftsverhältnis zum Haushaltvorstand (1 000) | 178 |
| 67 Arbeitslose nach dem Verwandtschaftsverhältnis zum Haushaltvorstand (%) | 180 |
| 68 Aufgegliederte Dauer der Arbeitsuche von arbeitslosen Arbeitsuchenden (1 000) | 182 |
| 69 Aufgegliederte Dauer der Arbeitsuche von arbeitslosen Arbeitsuchenden (%) | 184 |
| 70 Dauer der Arbeitsuche für die wichtigsten Gruppen von arbeitslosen Arbeitsuchenden (1 000) | 186 |
| 71 Dauer der Arbeitsuche für die wichtigsten Gruppen von arbeitslosen Arbeitsuchenden (%) | 188 |
| 72 Dauer der Arbeitsuche von arbeitslosen Arbeitsuchenden nach grob untergliederten Altersgruppen (%) | 190 |
| 73 Dauer der Arbeitsuche von arbeitslosen Arbeitsuchenden nach dem Verwandtschaftsverhältnis zum Haushaltvorstand (%) | 192 |
| 74 Arbeitslose, die ihre Arbeit als abhängig Beschäftigte aus wirtschaftlichen Gründen verloren oder selbständig gekündigt haben, nach vorherigem Wirtschaftszweig (1 000) | 194 |
| 75 Arbeitslose, die eine Arbeit suchen oder bereits gefunden haben, die sie jedoch erst später aufnehmen, nach Art der gesuchten Beschäftigung (1 000) | 196 |
| 76 Arbeitslose, die eine Arbeit suchen oder bereits gefunden haben, die sie jedoch erst später aufnehmen, nach Art der gesuchten Beschäftigung (%) | 196 |
| 77 Arbeitslose, die eine Arbeit suchen oder bereits gefunden haben, die sie jedoch erst später aufnehmen, nach grob untergliederten Altersgruppen und Art der gesuchten Beschäftigung (1 000) | 198 |
| 78 Arbeitslose, die eine Arbeit suchen oder bereits gefunden haben, die sie jedoch erst später aufnehmen, nach grob untergliederten Altersgruppen und Art der gesuchten Beschäftigung (%) | 200 |
| 79 Arbeitslose, die eine bezahlte Beschäftigung suchen, nach Art der Arbeitsuche (1 000) | 202 |
| 80 Arbeitslose, die eine bezahlte Beschäftigung suchen, nach Art der Arbeitsuche (%) | 204 |
| 81 Personen, die einer Tätigkeit nachgehen und eine andere suchen, nach grob untergliederten Altersgruppen und Gründen (1 000) | 206 |
| 82 Personen, die einer Tätigkeit nachgehen und eine andere suchen, nach grob untergliederten Altersgruppen und Gründen (%) | 208 |
| 83 Dauer der Arbeitslosigkeit (1 000) | 210 |
| 84 Dauer der Arbeitslosigkeit (%) | 212 |

Erläuterung

Organisation der Erhebung

Das Statistische Amt der Europäischen Gemeinschaften (Eurostat) legt in Zusammenarbeit mit den nationalen Sachverständigen der Mitgliedstaaten den Inhalt der Erhebung fest und gibt eine detaillierte Beschreibung in einer gemeinsamen Kodierung.

Artikel 4 der Verordnung (EWG) Nr. 3473/88 des Rates, die die Rechtsgrundlage für die Erhebung 1989 bildete, enthält eine kurze Beschreibung der im Rahmen der Erhebung erfragten Informationen.

Den statistischen Diensten der Mitgliedsländer fallen folgende Aufgaben zu: Auswahl der Stichprobe, Vorbereitung der Fragebögen, Abwicklung der direkten Befragungen von Haushalten sowie Übermittlung der Ergebnisse an Eurostat gemäß dem standardisierten Kodierungsschema.

Eurostat arbeitet das Programm für die Analyse der Ergebnisse aus und ist für Verarbeitung und Verbreitung der von den einzelstaatlichen Stellen gelieferten Informationen zuständig.

Eine genaue Beschreibung der bei der Stichprobenauswahl angewandten Methoden, der Anpassungsverfahren, der Definitionen und der für die Erhebung über Arbeitskräfte auf Gemeinschaftsebene verwendeten gemeinsamen Kodierung ist der Veröffentlichung *Erhebung über Arbeitskräfte – Methodik und Definitionen* zu entnehmen.

Bezugszeitraum

Die Angaben zur Beschäftigungslage der einzelnen Befragten beziehen sich auf die jeweilige Situation in einer ganz bestimmten Bezugswoche.

Im allgemeinen sollte es sich bei der Bezugswoche um eine normale Woche im Frühjahr ohne gesetzliche Feiertage handeln. In den Ländern, die sich auf eine ganz bestimmte Woche festlegen – z. B. Italien –, lässt sich diese Forderung ohne weiteres erfüllen. In einigen Ländern gilt jedoch die Woche vor der Erhebungswoche als Bezugszeitraum, und da sich die Erhebung über eine bestimmte Zeitspanne erstreckt, wird hier unter Zugrundelegung einer beweglichen Bezugswoche vorgegangen. In diesem Fall kann nicht gewährleistet werden, daß es sich bei der Bezugswoche um eine normale Woche handelt.

Für die Erhebung von 1989 fielen die Bezugswochen in folgende Zeiten:

| | |
|----------------------------|------------|
| Belgien | April |
| Dänemark | März–April |
| Bundesrepublik Deutschland | April |
| Griechenland | April–Juni |
| Spanien | März–Juni |
| Frankreich | März |
| Irland | April–Mai |

| | |
|------------------------|------------------|
| Italien | April |
| Luxemburg | Mai |
| Niederlande | Januar–Mai |
| Portugal | Januar und April |
| Vereinigtes Königreich | März–Mai |

Erhebungsbereich

Die Erhebung soll alle Gebietsansässigen – d. h. alle Personen, deren regulärer Wohnsitz sich auf dem Territorium der Mitgliedstaaten der Gemeinschaft befindet – erfassen.

Aus technischen und methodischen Gründen ist es jedoch nicht in allen Ländern möglich, die in Anstaltshäusern lebende Bevölkerung, zu der u. a. die in Heimen, Internaten, Krankenhäusern, kirchlichen Einrichtungen und Arbeitserheimen wohnenden Personen gehören, mit zu erfassen.

Infolgedessen werden die Gemeinschaftsergebnisse um der Harmonisierung des Erhebungsbereiches willen ausschließlich auf der Grundlage der in privaten Haushalten lebenden Bevölkerung zusammengestellt.

Erfaßt werden alle Personen, die in der Bezugswöche in den befragten Haushalten leben. Diese Definition schließt auch alle diejenigen ein, die kurzzeitig wegen Bildungsmaßnahmen, Urlaub, Krankheit, Geschäftsreise und ähnlichem nicht im Haushalt anwesend sind.

Der jeweilige Stichprobenumfang wurde gemäß den Leitlinien von Artikel 3 der vorgenannten Verordnung festgelegt. Die Zahl der für jedes Land in die Erhebungen von 1989 einbezogenen Haushalte belief sich auf:

| | |
|----------------------------|---------|
| Belgien | 31 780 |
| Dänemark | 16 280 |
| Bundesrepublik Deutschland | 95 341 |
| Griechenland | 48 638 |
| Spanien | 58 207 |
| Frankreich | 65 417 |
| Irland | 45 393 |
| Italien | 140 749 |
| Luxemburg | 9 265 |
| Niederlande | 30 467 |
| Portugal | 26 688 |
| Vereinigtes Königreich | 65 247 |

Zuverlässigkeit der Ergebnisse

Stichprobenfehler

Wie alle Stichprobenerhebungen ist auch die Arbeitskräfteerhebung mit einem Stichprobenfehler behaftet. Mit größter Sicherheit hätte eine Totalzählung, bei der die gleichen Fragebögen, Interviewer, Kontrolleure, Datenverarbeitungsverfahren usw. wie bei der Arbeitskräfteerhebung eingesetzt worden wären, zu etwas anderen Ergebnissen geführt. Diese

Abweichung bezeichnet man als den Stichprobenfehler des Schätzwertes.

DE

Die relative Größe des Stichprobenfehlers wird im wesentlichen von zwei Faktoren bestimmt: von der Größe des Schätzwertes und der Gleichmäßigkeit, mit der das Merkmal, auf das sich der Schätzwert bezieht, in der Bevölkerung verteilt ist. Von zwei Schätzwerten vergleichbarer Größe dürfte der größere prozentual den kleineren Stichprobenfehler aufweisen. Von zwei Schätzwerten vergleichbarer Größe dürfte dagegen derjenige mit dem kleineren relativen Stichprobenfehler behaftet sein, der sich auf ein in der Bevölkerung gleichmäßig verteiltes Merkmal bezieht. In der vorliegenden Veröffentlichung werden Ergebnisse, bei denen ein sehr großer relativer Stichprobenfehler angenommen werden kann, durch das Zeichen „...“ ersetzt; andere relativ ungenaue Schätzwerte sind in Klammern () angegeben.

Einen Anhaltspunkt für die Größenordnung des prozentualen Stichprobenfehlers bietet der Variationskoeffizient eines Schätzwertes. Eurostat hat die Mitgliedstaaten um die Berechnung des Variationskoeffizienten für einige Grundvariablen (Beschäftigte nach Hauptindustriezweigen, Arbeitslose, Arbeitslosenquoten, Arbeitskräfte und Erwerbsquoten), aufgelistet nach Geschlecht und Lebensalter, gebeten. Die eingegangenen Antworten zeigen, daß die einzelstaatlichen Ergebnisse der Arbeitskräfteerhebung für die genannten Variablen zuverlässig sind.

Beantwortung der Erhebung

Eine signifikante Quelle stichprobenfremder Fehler ist bei der Arbeitskräfteerhebung die Beeinflussung der Ergebnisse durch Nichtbeantwortung. Die Nichtbeantwortungsquoten liegen normalerweise zwischen etwa 5 % und 19 % und in den meisten Mitgliedstaaten bei rund 6 %. Die Bereinigung der Nichtbeantwortungen erfolgte in den meisten Ländern durch eine Gewichtung der Ergebnisse, in einigen Fällen durch „Doppelung“ oder „Substitution“ von Einheiten. In mehreren Ländern durchgeführte Qualitätsproben deuten darauf hin, daß Einpersonenhaushalte in der Stichprobe möglicherweise unterrepräsentiert sind, da sie im allgemeinen schwerer zu erreichen sind als Haushalte mit mehreren Personen.

Gewichtung

Die Ergebnisse der Erhebung von 1989 wurden mit unabhängig gehaltenen Bevölkerungsschätzungen für verschiedene Kategorien von Alter, Geschlecht, Regionen, Staatsangehörigkeiten usw. gewichtet. Nähere Angaben zu den Gewichtungs- und Bereinigungsverfahren enthält die Veröffentlichung *Erhebung über Arbeitskräfte – Methodik und Definitionen*.

Grundlegende Begriffe und Definitionen

Erwerbstätige sind Personen, die während der Bezugswoche irgendeiner beruflichen Tätigkeit nachgingen, für die sie ein Entgelt in Form von Lohn oder sonstigen Einkünften erhielten, einschließlich derjenigen, die zwar in einem Arbeitsverhältnis standen, aber vorübergehend vom Arbeitsplatz abwesend waren. Eingeschlossen sind auch mithelfende Familienangehörige, nicht jedoch vorübergehend Entlassene (lay off).

Arbeitslose sind Personen, die während der Bezugswoche in keinem Arbeitsverhältnis standen und die

- a) effektiv nach einer bezahlten Beschäftigung suchten und unmittelbar für die Aufnahme einer Tätigkeit zur Verfügung standen;
- b) sich selbstständig machen wollten;

- c) auf Wiedereinstellung nach vorübergehender Entlassung (lay off) warteten;
- d) eine Arbeit gefunden hatten, die sie nach der Bezugswoche aufnehmen sollten.

Unter **Arbeitskräften** ist die Summe der Erwerbstätigen und Arbeitslosen zu verstehen.

Nichtaktive Personen sind diejenigen, die nicht zu den Erwerbstätigen bzw. Arbeitslosen zählen.

Diese Definitionen beziehen sich auf die Bevölkerung im erwerbsfähigen Alter (ab 14 Jahren).

Erwerbsquoten stellen die Arbeitskräfte dar als prozentualen Anteil der Bevölkerung im arbeitsfähigen Alter, die in Privathaushalten leben.

Das **Verhältnis Erwerbstätige/Bevölkerung** ist die Zahl der Erwerbstätigen als Prozentsatz der in Privathaushalten lebenden Bevölkerung im erwerbsfähigen Alter.

Die **Arbeitslosenquoten** geben die Zahl der Arbeitslosen als Prozentsatz der Arbeitskräfte wieder.

Die oben angeführten Quoten werden normalerweise nach Geschlecht/Altersgruppen berechnet und manchmal noch zusätzlich nach anderen demographischen Variablen, wie z. B. Familienstand oder Staatsangehörigkeit, unterteilt.

Die **Dauer der Arbeitslosigkeit** ist definiert als

- a) die Dauer der Arbeitsuche;
- b) die Länge des Zeitraums seit Ausübung der letzten Tätigkeit (wenn dieser Zeitraum kürzer als die Dauer der Arbeitsuche ist).

Diese Definitionen und Begriffe werden in dem Band *Erhebung über Arbeitskräfte – Methodik und Definitionen* ausführlich erklärt.

Vergleichbarkeit mit vorausgegangenen Erhebungen

Die für die laufende Erhebungsreihe verwendeten Konzepte und Definitionen wurden 1983 in Anlehnung an Empfehlungen des Internationalen Arbeitsamtes eingeführt. Da diese Konzepte seitdem konsequent angewendet wurden, sind die Erhebungsergebnisse eines Jahres mit denen anderer Jahre vergleichbar. Außerdem können die Daten der Gemeinschaft mit denen anderer Länder, die dieselben international vereinbarten Definitionen verwenden, verglichen werden. Aufgrund der 1983 durchgeführten Überarbeitung ist es allerdings nicht möglich, die Ergebnisse der laufenden Gemeinschaftserhebung über Arbeitskräfte mit den Ergebnissen der vor 1983 durchgeführten Erhebungen zu vergleichen.

Eine Beschreibung der Änderungen an den Definitionen und eine Bewertung ihrer quantitativen Auswirkungen zwischen 1981 und 1983 sind in der Veröffentlichung der Erhebungsergebnisse für 1983 enthalten.

Anmerkungen zu der Erhebung von 1989

Die Fragebogen sind von den einzelstaatlichen statistischen Diensten so gestaltet, daß sowohl die Belange der Gemeinschaft als auch die der einzelnen Länder berücksichtigt werden können. Die Umsetzung der Daten aus den einzelstaatlichen Fragebogen in den Gemeinschaftskode erfordert daher für jedes einzelne Land ein umfassendes „Umsetzungsprogramm“. Obwohl sich Eurostat und die Mitgliedstaaten um Überwindung der damit verbundenen technischen Schwierig-

keiten bemüht haben, um eine optimale Harmonisierung zu erreichen, führen unterschiedliche einzelstaatliche Praktiken und Arbeitsgesetze sowie demographische Besonderheiten und das jeweilige soziale und politische Umfeld unvermeidlich dazu, daß für bestimmte Länder einige Ausnahmen und Besonderheiten in Kauf genommen werden müssen.

DÄNEMARK

Da die Auswahlseinheit der Stichprobe die Familie ist, wird der Status des „Haushaltsvorstandes“ im allgemeinen der Frau zugeordnet, während der Mann als „Ehegatte“ erfaßt wird.

BUNDESREPUBLIK DEUTSCHLAND

Der Anstieg der Zahl der Nichtstaatsangehörigen aus Staaten außerhalb der Gemeinschaft ist nicht durch Bürger der Deutschen Demokratischen Republik bedingt, da diese nicht mehr als solche erfaßt werden.

GRIECHENLAND

Die relativ kleine Zahl eingeschriebener Arbeitsloser in Griechenland ist auf das besondere System der Arbeitslosenunterstützung in diesem Land zurückzuführen.

ITALIEN

- a) Daten, die sich auf in Italien lebende Ausländer beziehen, stehen nicht zur Verfügung
- b) Die relativ hohe Zahl derjenigen, die einen ersten Arbeitssplatz suchen, spiegelt die in diesem Land übliche Stabilität des Arbeitsplatzes wider. Diesen hohen Zahlen steht die verhältnismäßig niedrige Zahl Arbeitsloser gegenüber, die nach dem Verlust ihres Arbeitsplatzes nach einer neuen Erwerbstätigkeit suchen.

VEREINIGTES KÖNIGREICH

- a) Der Begriff der mitgehelfenden Familienangehörigen wird im Vereinigten Königreich nicht angewendet.
- b) Als eingeschriebene Arbeitslose ausgewiesene Personen sind Personen, die Anspruch auf Arbeitslosenunterstützung haben. Daten über Empfänger von Arbeitslosenunterstützung stehen nicht zur Verfügung.
- c) Der scheinbare Rückgang der ausländischen Bevölkerung zwischen 1988 und 1989 ist durch eine Definitionänderung bedingt. Die Unterposition „Andere britische Staatsangehörige“, die bisher der Kategorie „Nicht-EG Staaten“ zugerechnet wurde, wird seit 1989 der Kategorie „Britische Staatsangehörige“ zugerechnet.

Preface

Eurostat presents in this volume the detailed results of the 1989 Community labour force survey, conducted in the Community on the basis of Council Regulation (EEC) No 3473/88 of 7 November 1988.

Over the years this survey has been developed into a powerful and rich source of labour force statistics. The Community LFS is unique in that it employs common content and definitions for all Member States and, as such, is extensively used in meeting requirements with regard to labour market statistics for the Community's social and regional development policies.

The 1989 survey belongs to the current series of annual surveys which began in 1983. It is intended that this series will remain essentially unchanged in format until 1991. From 1992 a major revision of the survey is planned under the Statistical Programme of the European Communities 1989–92. The new series will include an enlargement in the survey content in order to meet changing statistical requirements and improvements to data quality and reliability at both national and regional levels.

The Community labour force survey is carried out taking into account the International Labour Office guidelines for labour force statistics adopted by the 13th International Conference of Labour Statisticians held in 1982, and thus conforms with internationally agreed and accepted standards.

Information on the content and methodological characteristics of the survey can be found in the publication *Labour force sample survey – Methods and definitions, 1988*.

Our thanks go to all experts of national statistical services who were responsible for running the survey in each Member State and providing Eurostat with basic data according to Community requirements. The elaboration of the results as presented here was the responsibility of the Division "Employment and Unemployment" of the Statistical Office of the European Communities.

Luxembourg, December 1990

Explanatory notes

EN

Organization of the survey

The Statistical Office of the European Communities (Eurostat), together with the national experts of the Member States, determine the content of the survey and provide a detailed description in a common coding scheme.

A summary presentation of the type of information covered by the survey was included in Article 4 of Council Regulation (EEC) No 3473/88 which formed the legal basis for the 1989 survey.

The national statistical institutes are responsible for selecting the sample, preparing the questionnaires, conducting the direct interviews among households, and forwarding the results to Eurostat in accordance with the standard coding scheme.

Eurostat devises the programme for analysing the results and is responsible for processing and disseminating the information forwarded by the national institutes.

A detailed description of the sampling methods, the adjustment procedures, the definitions and the common Community coding currently used in the labour force survey is presented in the publication *Labour force sample survey – Methods and definitions*.

Reference period

The labour force characteristics of each person interviewed refer to his situation in a particular reference week.

As a general rule the reference week should be a normal week in spring excluding bank holidays. For countries using a fixed week such as Italy, this requirement is easy to fulfil. In some countries, however, the reference week is the one preceding the week of the interview and, as the survey extends over a period of time, the mobile reference week method is used. In this case it cannot be guaranteed that the reference week represents a normal week.

For the 1989 survey, the reference weeks were distributed within the following periods:

| | |
|----------------|-------------------|
| Belgium | April |
| Denmark | March–April |
| FR of Germany | April |
| Greece | April–June |
| Spain | March–June |
| France | March |
| Ireland | April–May |
| Italy | April |
| Luxembourg | May |
| Netherlands | January–May |
| Portugal | January and April |
| United Kingdom | March–May |

Field of survey

The survey is intended to cover the whole of the resident population, i.e. all persons whose usual place of residence is in the territory of the Member States of the Community.

For technical and methodological reasons, however, it is not possible in all the countries to include the population living in collective households, i.e. persons living in homes, boarding schools, hospitals, religious institutions, workers' hostels, etc.

Consequently, for the purposes of harmonizing the field of survey, the Community results are compiled on the basis of the population of private households only. This comprises all persons living in the households surveyed during the reference week. This definition also includes persons absent from the household for short periods due to studies, holidays, illness, business trips, etc.

Sample sizes were fixed according to the guidelines of Article 3 of the abovementioned Regulation and the number of private households for each country which participated in the 1989 survey were:

| | |
|----------------|---------|
| Belgium | 31 780 |
| Denmark | 16 280 |
| FR of Germany | 95 341 |
| Greece | 48 638 |
| Spain | 58 207 |
| France | 65 417 |
| Ireland | 45 393 |
| Italy | 140 749 |
| Luxembourg | 9 265 |
| Netherlands | 30 467 |
| Portugal | 26 688 |
| United Kingdom | 65 274 |

Reliability of the results

Sampling error

As with any sample survey, the results of the labour force survey are subject to sampling error. It is almost certain that somewhat different figures would have been obtained if a complete census had been carried out using the same questionnaires, interviewers, supervisors, data-processing techniques, etc. as those used in the labour force survey. This difference is known as the sampling error of the estimate.

In a given sample, there are basically two factors which account for the relative magnitude of the sampling error of a characteristic: the frequency with which it occurs, and the evenness with which it is distributed among the population. Of two estimates, the larger is likely to have a smaller per cent sampling error, while of two estimates of comparable size the one which refers to a characteristic more evenly spread throughout the population would in general be subject to smaller relative sampling variability.

In this publication results likely to have very wide margins of relative sampling variability have been replaced by a dot, while other relatively imprecise estimates are shown within brackets.

An indication of the per cent sampling error can be provided by the coefficient of variation of an estimate. Eurostat has requested the Member States to calculate the coefficient of variation for certain basic variables (employed by broad industrial group, unemployed, unemployment rates, labour force and activity rates) by sex and age. The answers received indicate that for the abovementioned variables the labour force survey provides reliable results at national level.

Survey response

A significant source of non-sampling error in the labour force survey is the effect of non-response on the results. Non-response rates normally range from about 5% to 19% with most Member States around 6%. Adjustment for non-response in the majority of countries was made by reweighting the results while in some cases the method used was 'duplication' or 'substitution' of units. Quality checks carried out in various countries suggest that one-person households may be under-represented in the sample as they tend to be more difficult to contact than households containing several persons.

Weighting

The 1989 survey results were weighted up to independently derived population estimates for various age, sex, region, nationality, etc. categories. More information about weighting and adjustment procedures can be found in *Labour force sample survey – Methods and definitions*.

Basic concepts and definitions

Persons in employment are those who during the reference week did any work for pay or profit, or were not working but had jobs from which they were temporarily absent. Family workers are included but not persons on lay-off.

Unemployed persons are those who, during the reference week, had no employment and:

- (a) were actively looking for paid employment and were immediately available to start work, or
- (b) were looking to set up their own business or professional practice, or
- (c) were waiting to be called back to a job from which they had been laid off, or
- (d) had found a job to start after the reference week.

The *labour force* is defined as the sum of persons in employment and unemployed persons.

Inactive persons are those who are not classified as employed or unemployed.

These definitions relate to the population of working age (14 years and over).

Activity rates represent the labour force as a percentage of the population of working age living in private households.

Employment/population ratios represent persons in employment as a percentage of the population of working age living in private households.

Unemployment rates represent unemployed persons as a percentage of the labour force.

The above rates are usually calculated for sex/age groups and sometimes further cross-classified by other demographic variables such as marital status or nationality.

Duration of unemployment is defined as:

- (a) the duration of search for a job, or
- (b) the length of the period since the last job was held (only if this period is shorter than the duration of search for a job).

These definitions and concepts are explained in detail in the publication *Labour force sample survey – Methods and definitions*.

Comparability with previous surveys

The concepts and definitions used in the current series of the survey were introduced in 1983, being based upon recommendations from the International Labour Office. Since the application of these concepts has remained consistent from this time, the results of the survey are comparable from year to year. Moreover, it is possible to compare the data with those of non-Community countries which apply the same internationally agreed definitions. However, as a result of the 1983 revision, it is not possible to compare the results of the current Community labour force surveys with those held prior to 1983.

A description of the changes in definition and an appraisal of the quantitative effects of these changes between 1981 and 1983 are shown in the publication of the 1983 survey's results.

Specific remarks relating to the 1989 survey

As the individual questionnaires are designed by the national statistical services in order to cover both Community and national requirements, the passage from national questionnaires to the Community coding requires a complex conversion programme specific to each country. Although Eurostat and the Member States have endeavoured to overcome the technical difficulties involved in order to reach the best possible harmonization, differences in national practices and labour legislation, combined with demographic particularities and the social and political environment, unavoidably lead to some exceptions and peculiarities in certain countries.

DENMARK

Due to the method of sample selection, which is based on the family unit, the 'head of household' is normally assigned to the female, while the male is considered as 'spouse'.

FR of GERMANY

The increase in the population of non-nationals coming from countries outside the Community does not include any influx of citizens of the former German Democratic Republic, since these were not separately identified by nationality.

GREECE

The relatively small number of registered unemployed in Greece is due to the particular system of unemployment benefit prevailing in this country.

ITALY

- (a) Data referring to foreigners living in Italy are not available.
- (b) The relatively high number of first-job seekers reflects the convention and practice of job stability in the Italian labour market. The counterpart of this high number is the relatively low number of unemployed seeking work following the loss of their job.

UNITED KINGDOM

- (a) The concept of family worker does not apply in the United Kingdom.
- (b) Persons shown as registered unemployed are in fact claimants to unemployment benefit. Data on recipients of unemployment benefit are not available.
- (c) The apparent decrease in foreign population between 1988 and 1989 is due to a change in definition whereby the sub-division 'Other British subjects', previously included in the category 'Non-EC countries' is from 1989 included in the category 'Nationals'.

EN

Avant-propos

L'Eurostat publie, dans le présent volume, les résultats détaillés de l'enquête communautaire sur les forces de travail menée en 1989 dans la Communauté européenne en application du règlement (CEE) n° 3473/88 du Conseil du 7 novembre 1988.

Au fil des ans, cette enquête est devenue une source importante et précieuse de statistiques sur les forces de travail dans la Communauté. Elle est un instrument unique en ce sens que son contenu et les définitions qu'elle utilise sont communs pour tous les États membres et qu'elle est, en tant que telle, largement utilisée pour répondre aux exigences des statistiques du marché du travail destinées à la définition des politiques sociales et régionales de la Communauté.

L'enquête de 1989 fait partie de la nouvelle série d'enquêtes annuelles mise en place en 1983, et dont le format devrait, pour l'essentiel, demeurer inchangé jusqu'en 1991. Dans le cadre du programme statistique des Communautés européennes 1989-1992, l'enquête devra faire l'objet d'une révision approfondie à partir de 1992. La nouvelle série d'enquêtes se caractérisera notamment par un accroissement des contenus et ce, afin de faire face aux changements affectant les exigences en matière de statistiques, ainsi que par une amélioration de la qualité et de la fiabilité des données, au niveau tant national que régional.

L'enquête communautaire sur les forces de travail est effectuée en tenant compte des recommandations du Bureau international du travail concernant les statistiques du travail adoptées par la treizième conférence internationale des statisticiens du travail, qui s'est tenue en 1982; elle est donc conforme aux normes convenues et acceptées au niveau international.

Des informations sur le contenu et les caractéristiques des enquêtes sont publiées dans le volume intitulé *Enquête par sondage sur les forces de travail – Méthodes et définitions, 1988*.

Nous remercions tous les experts des services statistiques nationaux qui réalisent l'enquête dans chaque État membre et fournissent à l'Eurostat les données de base requises par la Communauté. L'élaboration des résultats tels qu'ils sont présentés ici a été effectuée par la division «Emploi et chômage» de l'Office statistique des Communautés européennes.

Notes explicatives

Organisation de l'enquête

L'Office statistique des Communautés européennes (Eurostat), en collaboration avec les experts nationaux des Etats membres, détermine le contenu de l'enquête et donne une description détaillée répondant à une codification commune.

Une présentation sommaire du type d'information couvert par l'enquête est reprise à l'article 4 du règlement (CEE) n° 3473/88 du Conseil, qui constitue la base juridique de l'enquête 1989.

Les instituts statistiques nationaux sont chargés de sélectionner l'échantillon, de préparer les questionnaires, d'effectuer les interviews directes auprès des ménages et de transmettre les résultats à l'Eurostat suivant le système de codification normalisé.

L'Eurostat élabore le programme d'analyse des données et se charge du traitement et de la diffusion des résultats transmis par les instituts statistiques nationaux.

Une description détaillée des méthodes d'échantillonnage et des procédures d'ajustement propres à chaque pays, ainsi que des définitions et du système communautaire de codification retenus actuellement pour l'enquête sur les forces de travail, est reprise dans la publication intitulée *Enquête sur les forces de travail – Méthodes et définitions*.

Période de référence

Les caractéristiques de chaque personne interrogée dans le cadre de l'enquête sur les forces de travail concernent sa situation au cours d'une semaine de référence donnée.

En règle générale, la semaine de référence doit être une semaine normale au printemps, choisie en dehors des fêtes légales. Pour les pays qui utilisent une semaine fixe, comme l'Italie, cette condition est facile à remplir. Toutefois, dans certains pays, comme la semaine de l'enquête est fixée de manière variable au cours de cette période, on utilise la méthode de la semaine de référence mobile. Dans ce cas, on ne peut garantir que la semaine de référence représente une semaine normale.

Pour l'enquête de 1989, les semaines de référence se sont réparties sur les périodes suivantes :

| | |
|----------------|-------------|
| Belgique | avril |
| Danemark | mars-avril |
| RF d'Allemagne | avril |
| Grèce | avril-juin |
| Espagne | mars-juin |
| France | mars |
| Irlande | avril-mai |
| Italie | avril |
| Luxembourg | mai |
| Pays-Bas | janvier-mai |

| | |
|-------------|------------------|
| Portugal | janvier et avril |
| Royaume-Uni | mars-mai |

Domaine de l'enquête

L'enquête couvre normalement toute la population résidente, c'est-à-dire toutes les personnes dont le lieu normal de résidence se trouve sur le territoire des États membres de la Communauté.

Pour des raisons techniques et méthodologiques, il n'est toutefois pas possible dans tous les pays de considérer la population vivant dans des ménages collectifs, c'est-à-dire les personnes habitant dans des hospices, pensions, hôpitaux, institutions religieuses, foyers pour travailleurs, etc.

En conséquence, pour harmoniser le domaine de l'enquête, les résultats de la Communauté sont établis sur la base de la population des seuls ménages privés.

Sont comprises toutes les personnes vivant dans les ménages sur lesquels a porté l'enquête au cours de la semaine de référence. Cette définition inclut, par ailleurs, les personnes absentes du ménage pour de courtes périodes, pour raisons d'études, de congé, de maladie, d'affaires, etc.

Les tailles des échantillons ont été fixées conformément aux directives de l'article 3 du règlement susmentionné. Les ménages privés qui ont participé à l'enquête de 1989 sont, pour les différents pays, au nombre de :

| | |
|----------------|---------|
| Belgique | 31 780 |
| Danemark | 16 280 |
| RF d'Allemagne | 95 341 |
| Grèce | 48 638 |
| Espagne | 58 207 |
| France | 65 417 |
| Irlande | 45 393 |
| Italie | 140 749 |
| Luxembourg | 9 265 |
| Pays-Bas | 30 467 |
| Portugal | 26 688 |
| Royaume-Uni | 65 247 |

Fiabilité des résultats

Erreur d'échantillonnage

Comme pour toute enquête par sondage, les résultats de l'enquête sur les forces de travail sont sujets à des erreurs d'échantillonnage. Il est presque certain que des chiffres quelque peu différents auraient été obtenus si un recensement complet avait été effectué en utilisant les mêmes questionnaires, interviewers, superviseurs, techniques de traitement des données, etc. que ceux effectivement utilisés dans la présente enquête. Ce type de différence est appelé «erreur d'échantillonnage» de l'estimation.

Pour un échantillon donné, il existe essentiellement deux facteurs qui influencent l'ampleur relative de l'erreur d'échantillonnage sur la mesure d'une caractéristique de la population: d'une part, la fréquence avec laquelle cette caractéristique se présente et, d'autre part, la régularité avec laquelle elle est répartie parmi la population. Entre deux estimations, la plus haute aura, selon toute probabilité, une erreur d'échantillonnage inférieure en pourcentage, tandis qu'entre deux estimations de dimension comparable, celle qui se réfère à une caractéristique répartie de façon plus régulière dans la population sera généralement sujette à une plus faible erreur d'échantillonnage relative.

FR

Dans la présente publication, les résultats susceptibles d'avoir des marges très importantes d'erreur d'échantillonnage relative ont été remplacés par un point, tandis que les autres estimations relativement imprécises apparaissent entre parenthèses.

Une indication de l'erreur d'échantillonnage exprimée en pourcentage peut être fournie par le coefficient de variation d'une estimation. L'Eurostat a demandé aux États membres de calculer les coefficients de variation de certaines variables de base (personnes ayant un emploi par secteur d'activité, chômeurs, taux de chômage, forces de travail et taux d'activité) par sexe et par âge. Les réponses reçues indiquent que, pour les variables susmentionnées, l'enquête sur les forces de travail fournit des résultats fiables au niveau national.

Réponse à l'enquête

Dans l'enquête sur les forces de travail, une source importante d'erreurs qui ne sont pas dues à l'échantillonnage réside dans l'effet de non-réponse sur les résultats. Les taux de non-réponse s'échelonnent habituellement entre 5 et 19 %, la moyenne des États membres s'établissant à 6 %. Dans la majorité des pays, l'ajustement pour non-réponse a été effectué en procédant à une nouvelle pondération des résultats, tandis que, dans certains cas, la méthode utilisée a consisté dans le «dédoubllement» ou la «substitution» des unités. Les contrôles de qualité effectués dans plusieurs pays suggèrent que les ménages d'une personne peuvent être sous-représentés dans l'échantillon du fait qu'ils sont généralement plus difficiles à contacter que les ménages comportant plusieurs personnes.

Pondération

Les résultats de l'enquête de 1989 ont été pondérés en fonction d'estimations de population dérivées de façon indépendante pour les diverses catégories d'âge, de sexe, de région, de nationalité, etc. De plus amples informations sur les procédures de pondération et d'ajustement sont publiées dans le volume *Enquête par sondage sur les forces de travail – Méthodes et définitions*.

Concepts et définitions de base

Les «personnes ayant un emploi» sont celles qui, au cours de la semaine de référence, ont effectué un travail contre rémunération ou en vue d'un bénéfice, ou ne travaillaient pas mais occupaient un emploi dont elles étaient temporairement absentes. Les aides familiaux sont donc inclus, mais pas les personnes mises à pied.

Les «chômeurs» sont les personnes qui, au cours de la semaine de référence, étaient sans travail et :

- recherchaient activement un travail rémunéré et étaient immédiatement disponibles, ou

- étaient sur le point de créer leur propre entreprise ou d'installer leur propre cabinet, ou
- attendaient d'être rappelées à un emploi qu'elles occupaient avant leur mise à pied, ou
- devaient exercer un nouvel emploi après la semaine de référence.

Les «forces de travail» comprennent les personnes ayant un emploi et les chômeurs.

Les «inactifs» sont ceux qui ne sont classés ni comme personnes ayant un emploi ni comme chômeurs.

Les définitions qui précèdent concernent la population en âge de travailler (14 ans et plus).

Les «taux d'activité» représentent le pourcentage des forces de travail par rapport à la population en âge de travailler vivant dans des ménages privés.

Les «rapports emploi/population» expriment le pourcentage des personnes ayant un emploi par rapport aux personnes en âge de travailler vivant dans des ménages privés.

Les «taux de chômage» représentent le pourcentage des chômeurs par rapport aux forces de travail.

Les taux précités sont généralement calculés par tranche d'âge avec une ventilation par sexe; ils font parfois également l'objet d'une ventilation croisée à l'aide d'autres variables démographiques, telles que l'état civil et la nationalité.

La «durée du chômage» se définit comme:

- la durée de la recherche d'un emploi, ou bien
- la longueur de la période depuis le dernier emploi occupé (seulement si cette période est plus courte que la durée de la recherche d'un emploi).

Ces définitions et concepts sont expliqués en détail dans la publication intitulée *Enquête sur les forces de travail – Méthodes et définitions*.

Comparabilité avec les enquêtes précédentes

L'utilisation systématique dans la nouvelle série d'enquête des mêmes concepts et définitions depuis leur introduction en 1983, sur la base des recommandations du Bureau international du travail, a permis la comparabilité des résultats d'une année à l'autre. Il est, en outre, possible de comparer les données avec celles obtenues dans des pays extracommunautaires qui appliquent les mêmes définitions découlant d'accords internationaux. Toutefois, et en raison des modifications intervenues en 1983, il n'est pas possible de comparer les résultats des nouvelles enquêtes communautaires sur les forces de travail avec ceux des enquêtes menées avant 1983.

Une description des changements apportés aux définitions et une appréciation des effets quantitatifs de ces changements entre 1981 et 1983 figurent dans le volume relatif aux résultats de l'enquête de 1983.

Remarques relatives à l'enquête de 1989

Comme les questionnaires individuels sont établis par les services statistiques nationaux afin de répondre à la fois aux exigences communautaires et nationales, le passage des questionnaires nationaux à la codification communautaire requiert un «programme de conversion» complexe et spécifique à chaque pays. Si l'Eurostat et les États membres se sont efforcés de surmonter les difficultés techniques afin d'obtenir la plus parfaite harmonisation, des différences, au niveau

national, de pratiques et de législation du travail associées aux particularités démographiques et à l'environnement social et politique entraînent inévitablement des exceptions et singularités dans certains pays.

DANEMARK

En raison de la méthode d'échantillonnage, basée sur l'unité familiale, c'est la femme qui est généralement désignée comme «chef de ménage», alors que l'homme est considéré comme «conjoint».

RF d'ALLEMAGNE

La hausse de la population des non-nationaux venant des pays non communautaires n'inclut pas les flux de citoyens de la République démocratique allemande, car ceux-ci n'étaient pas séparés par nationalité.

GRECE

Le nombre relativement faible de chômeurs enregistrés en Grèce est dû au système particulier d'allocations de chômage en vigueur dans ce pays.

ITALIE

- a) Les données relatives aux étrangers résidant en Italie ne sont pas disponibles.

- b) Le nombre relativement élevé de personnes à la recherche d'un premier emploi reflète la convention et la pratique de la stabilité d'emploi sur le marché du travail italien. La contrepartie en est le nombre relativement faible de chômeurs qui recherchent un emploi après avoir perdu le leur.

ROYAUME-UNI

- a) Le concept de l'aide familiale ne s'applique pas au Royaume-Uni.
- b) Les personnes enregistrées comme chômeurs sont en fait celles qui ont fait une demande d'allocation de chômage. Il n'y a pas de données disponibles sur les bénéficiaires d'allocations de chômage.
- c) La réduction apparente dans la population étrangère entre 1988 et 1989 est due à une modification des définitions. La subdivision «autres sujets britanniques» précédemment inclue dans la catégorie «pays non communautaires» apparaît dès 1989 dans la catégorie «nationaux».

FR

Prefazione

In questo volume Eurostat presenta i risultati dettagliati dell'indagine comunitaria 1989 sulle forze di lavoro condotta nella Comunità in conformità al regolamento (CEE) n. 3473/88 del Consiglio del 7 novembre 1988.

Nel corso degli anni la presente indagine è andata via via sviluppandosi fino a diventare una solida e ricca fonte di statistiche sulle forze di lavoro. La peculiarità di tale indagine è costituita dal fatto che contenuto e definizioni impiegate sono uguali per tutti gli Stati membri, cosicché i risultati possono essere ampiamente utilizzati per soddisfare le esigenze connesse alle statistiche del mercato del lavoro destinate all'elaborazione delle politiche comunitarie di sviluppo regionale e sociale.

L'indagine del 1989 rientra nelle serie attuali delle indagini annuali avviate nel 1983. Mentre si intende lasciare essenzialmente immutata la struttura di tali serie fino al 1991, una revisione fondamentale dell'indagine è prevista a partire dal 1992 nel quadro del programma statistico delle Comunità europee 1989-1992. Con le nuove serie sarà ampliato il contenuto dell'indagine così da rispondere alle mutevoli esigenze statistiche e consentire il miglioramento della qualità e dell'attendibilità dei dati a livello sia nazionale che regionale.

IT

L'indagine comunitaria sulle forze di lavoro viene effettuata in base alle direttive dell'Ufficio internazionale del lavoro per le statistiche sulle forze di lavoro approvate in occasione della XIII Conferenza internazionale degli statistici del lavoro tenutasi nel 1982, conformatosi pertanto a standard internazionali approvati ed accettati.

Per informazioni sui contenuti e sulle caratteristiche metodologiche delle indagini si rinvia alla pubblicazione «Indagine per campione sulle forze di lavoro: metodi e definizioni, 1988».

Rivolgiamo un particolare ringraziamento a tutti gli esperti degli istituti nazionali di statistica responsabili dello svolgimento dell'indagine nei singoli Stati membri, che hanno fornito all'Eurostat i dati di base nel rispetto delle esigenze comunitarie. L'elaborazione dei risultati qui presentati è stata affidata alla divisione «Occupazione e disoccupazione» dell'Istituto statistico delle Comunità europee.

Note esplicative

Preparazione dell'indagine

L'Istituto statistico delle Comunità europee (Eurostat), in collaborazione con gli esperti nazionali degli Stati membri, stabilisce il contenuto dell'indagine e ne fornisce una descrizione dettagliata servendosi di una codifica standard.

Una presentazione sommaria del tipo di informazioni oggetto dell'indagine figurava all'articolo 4 del regolamento (CEE) n 3473/88 del Consiglio che costituiva la base giuridica dell'indagine del 1989.

Gli istituti nazionali di statistica sono responsabili della selezione del campione, della preparazione dei questionari, dello svolgimento delle interviste presso le famiglie e della trasmissione dei dati Eurostat conformemente allo schema di codifica standard.

L'Eurostat predisponde il programma di analisi dei risultati ed è responsabile dell'elaborazione e della diffusione dei dati trasmessi dagli istituti nazionali.

Una descrizione dettagliata dei metodi di campionamento, delle procedure di adeguamento, delle definizioni e della codifica standard comunitaria comunemente impiegati nell'indagine sulle forze di lavoro figura nella pubblicazione «Indagine sulle forze di lavoro: metodi e definizioni».

Periodo di riferimento

Le caratteristiche delle forze di lavoro riguardano, per ogni persona intervistata, la sua situazione in una determinata settimana di riferimento.

Quale periodo di riferimento, viene generalmente scelta una normale settimana di primavera senza festività civili. Tale condizione è facile da rispettare per quei paesi che si servono di una settimana fissa, come l'Italia. In taluni paesi, tuttavia, la settimana di riferimento è quella che precede la settimana in cui viene svolta l'intervista per cui, dato che l'indagine abbraccia un certo arco di tempo, si ricorre al metodo della settimana di riferimento mobile. In tal caso non è possibile garantire che il periodo di riferimento rappresenti una settimana normale.

Per l'indagine del 1989 le settimane di riferimento erano distribuite entro i seguenti periodi :

| | |
|----------------|----------------|
| Belgio | aprile |
| Danimarca | marzo–aprile |
| RF di Germania | aprile |
| Grecia | aprile–giugno |
| Spagna | marzo–giugno |
| Francia | marzo |
| Irlanda | aprile–maggio |
| Italia | aprile |
| Lussemburgo | maggio |
| Paesi Bassi | gennaio–maggio |

Portogallo
Regno Unito

gennaio e aprile
marzo–maggio

IT

Campo d'osservazione

L'indagine mira a coprire l'intera popolazione residente, ovvero tutte le persone che risiedono normalmente sul territorio degli Stati membri della Comunità.

Per motivi di ordine tecnico e metodologico, tuttavia, non in tutti i paesi è possibile includere le persone che abitano in convivenze, quali case di riposo, collegi, ospedali, istituti religiosi, alloggi sul cantiere, ecc.

Pertanto, per armonizzare il campo dell'indagine, i dati comunitari sono stati elaborati con riferimento esclusivamente alle famiglie. Con ciò si intendono tutti i componenti delle famiglie oggetto d'indagine durante la settimana di riferimento. La definizione comprende anche le persone temporaneamente assenti dalla famiglia per motivi di studio, vacanza, malattia, viaggi d'affari, ecc.

Le dimensioni del campione sono state stabilite secondo quanto disposto dall'articolo 3 del regolamento sopra citato. Per ciascun paese il numero di famiglie partecipanti all'indagine 1989 è stato il seguente :

| | |
|----------------|---------|
| Belgio | 31 780 |
| Danimarca | 16 280 |
| RF di Germania | 95 341 |
| Grecia | 48 638 |
| Spagna | 58 207 |
| Francia | 65 417 |
| Irlanda | 45 393 |
| Italia | 140 749 |
| Lussemburgo | 9 265 |
| Paesi Bassi | 30 467 |
| Portogallo | 26 688 |
| Regno Unito | 65 247 |

Attendibilità dei risultati

Errore di campionamento

I risultati dell'indagine sulle forze di lavoro, come quelli di qualsiasi altra indagine per campione, sono soggetti ad errore di campionamento. È quasi certo che risultati alquanto diversi si sarebbero ottenuti se fosse stato effettuato un censimento completo pur utilizzando questionari, intervistatori, supervisori, sistemi di elaborazione dei dati, ecc., uguali a quelli impiegati nell'indagine sulle forze di lavoro. Tale differenza è definita errore di campionamento della stima.

In un determinato campione sono fondamentalmente due i fattori responsabili della relativa ampiezza dell'errore di campionamento di una caratteristica della popolazione: la frequenza con la quale essa si verifica e l'uniformità con cui essa è distribuita tra la popolazione. Tra due stime di dimensione

comparabile quella che si riferisce ad una caratteristica diffusa in modo più uniforme tra la popolazione sarà, in generale, soggetta ad una minore variabilità di campionamento relativa.

Nella presente pubblicazione i risultati suscettibili di presentare margini di variabilità di campionamento relativa molto ampi sono stati sostituiti con un puntino, mentre altre stime relativamente imprecise figurano tra parentesi.

Un'indicazione dell'errore di campionamento percentuale può essere fornita dal coefficiente di variazione di una stima. Eurostat ha chiesto agli Stati membri di calcolare il coefficiente di variazione per alcune variabili di base (occupati per grande settore industriale, disoccupati, tassi di disoccupazione, forza di lavoro e tassi di attività) per sesso e per età. Le risposte ricevute indicano che, per le variabili summenzionate, l'indagine sulle forze di lavoro fornisce risultati attendibili a livello nazionale.

Risposta all'indagine

Una notevole fonte di errore – non dovuto al campionamento – nell'indagine sulle forze di lavoro è costituita dall'effetto delle mancate risposte sui risultati. I tassi di non risposta variano consuetamente tra il 5 % e il 19 % e per la maggior parte degli Stati membri si aggirano intorno al 6 %. Le rettifiche per i casi di mancata risposta sono state effettuate nella maggioranza dei paesi mediante una riponderazione dei risultati mentre in altri il metodo utilizzato è stato quello della «duplicazione» o «sostituzione» delle unità. Controlli di qualità effettuati in vari paesi fanno ritenere che i nuclei familiari costituiti da una sola persona possono essere insufficientemente rappresentati nel campione, apparente più difficile stabilire contatti con tali nuclei che con quelli costituiti da più persone.

Ponderazione

I risultati dell'indagine 1989 sono stati ponderati sulla base di stime demografiche di altra provenienza per varie categorie, quali età, sesso, regione, nazionalità, ecc. Per ulteriori informazioni sulla ponderazione e sulle procedure di adeguamento si rinvia alla pubblicazione «Indagine sulle forze di lavoro: metodi e definizioni».

Concetti e definizioni di base

Personne occupate sono quelle che hanno svolto nella settimana di riferimento un qualsiasi lavoro retribuito o diretto all'ottenimento di un guadagno, o che non hanno lavorato, ma avevano un'occupazione da cui erano temporaneamente assenti. Sono compresi i coadiutori familiari, ma sono escluse le persone temporaneamente sospese dal lavoro (cassa integrazione guadagni, «lay-off»).

Personne disoccupate sono quelle che nella settimana di riferimento erano prive di occupazione e :

- a) stavano attivamente cercando un lavoro retribuito ed erano immediatamente disponibili ad iniziare a lavorare;
- b) intendevano avviare una propria attività commerciale o aprire un proprio studio professionale;
- c) stavano aspettando di essere richiamate a riprendere la propria attività dopo un periodo di sospensione dal lavoro («lay-off», cassa integrazione);
- d) avevano già trovato un'attività da iniziare dopo la settimana di riferimento.

Le *forze di lavoro* sono definite come l'insieme delle persone occupate e disoccupate.

Personne non attive sono tutte le persone non classificate come occupate o disoccupate.

Le definizioni si riferiscono alla popolazione in età lavorativa (tutte le persone di 14 anni ed oltre).

I *tassi di attività* esprimono in percentuale il rapporto tra forze di lavoro e popolazione in età lavorativa che vive in famiglia.

I *tassi occupazione/popolazione* indicano la percentuale delle persone occupate rispetto alla popolazione in età lavorativa che vive in famiglia.

I *tassi di disoccupazione* esprimono in percentuale il rapporto tra disoccupati e forze di lavoro.

I tassi di cui sopra vengono generalmente calcolati per classi d'età e per sesso, per poi essere a volte incrociati con altre variabili demografiche quali lo stato civile o la nazionalità.

La *durata della disoccupazione* è definita come segue :

- a) la durata della ricerca di occupazione, oppure
- b) la lunghezza del periodo intercorso dall'ultimo posto di lavoro occupato (soltanto se tale periodo è inferiore alla durata della ricerca di occupazione).

Tali definizioni e concetti sono illustrati per esteso nel volume «Indagine sulle forze di lavoro: metodi e definizioni».

Comparabilità con le precedenti Indagini

I concetti e le definizioni utilizzati nelle attuali serie dell'indagine vennero introdotti nel 1983 in applicazione delle raccomandazioni emanate dall'Ufficio internazionale del lavoro. Non essendo mutata da allora l'applicazione di tali concetti, i risultati dell'indagine sono comparabili da un anno all'altro. È inoltre possibile confrontare i dati con i paesi non comunitari che applicano le stesse definizioni concordate a livello internazionale. Tuttavia, in conseguenza della revisione del 1983, non è possibile confrontare i risultati delle attuali indagini sulle forze di lavoro della Comunità con quelli delle indagini precedenti il 1983.

Una descrizione delle modifiche nelle definizioni e una valutazione degli effetti quantitativi di tali modifiche tra il 1981 e il 1983 sono contenute nella pubblicazione riguardante i risultati dell'indagine 1983.

Osservazioni specifiche relative all'Indagine 1989

Poiché i questionari sono ideati dagli istituti nazionali di statistica onde far fronte ad esigenze tanto comunitarie quanto nazionali, il passaggio dai questionari nazionali alle codifiche comunitarie rende necessario un complesso «programma di conversione» specifico per ciascun paese. Quantunque Eurostat e gli Stati membri si siano impegnati a fondo per superare le difficoltà tecniche in modo da garantire la migliore armonizzazione possibile, differenze nelle legislazioni in materia di lavoro e nelle prassi nazionali unitamente a peculiarità demografiche e all'ambiente socio politico rendono inevitabili, in alcuni paesi, eccezioni e singolarità.

DANIMARCA

Il metodo della selezione per campione, che si basa sull'unità familiare, assegna abitualmente alla donna il ruolo di «capofamiglia», mentre l'uomo figura come «consorte».

RF DI GERMANIA

L'aumento della popolazione dei non-nazionali provenienti dai paesi non comunitari non comprende il flusso dei cittadini della

Repubblica democratica, poiché questi non erano definiti in base alla loro nazionalità.

GRECIA

Il numero relativamente basso dei disoccupati iscritti negli uffici di collocamento in Grecia è dovuto al particolare sistema di indennità di disoccupazione esistente in tale paese.

ITALIA

- a) I dati in merito agli stranieri residenti in Italia non sono disponibili.
- b) Il numero relativamente elevato di persone in cerca di prima occupazione riflette la convenzione e la prassi della sicurezza occupazionale sul mercato del lavoro italiano. Tale dato va confrontato con il numero relativamente

basso di disoccupati in cerca di lavoro per aver perso il proprio posto di lavoro.

REGNO UNITO

- a) Il concetto di coadiutore familiare non trova riscontro nel Regno Unito.
- b) Le persone indicate come disoccupati iscritti sono, in realtà, persone che chiedono l'indennità di disoccupazione. I dati sui beneficiari dell'indennità di disoccupazione non sono disponibili.
- c) L'apparente diminuzione della popolazione straniera tra il 1988 ed il 1989 è dovuta ad un cambiamento delle definizione stessa secondo la quale la suddivisione «Altri sudditi britannici», precedentemente inclusa nelle categorie «Paesi non-comunitari», è compresa a partire dal 1989 nelle categorie «nazionali».

ECU 20

La encuesta por sondeo de las fuerzas de trabajo fue realizada en la primavera de 1989 en todos los Estados miembros de la Comunidad, de conformidad con el reglamento (CEE) nº 3473/88 del Consejo, de 7 de noviembre de 1988.

En esta publicación, la Oficina Estadística de las Comunidades Europeas presenta los resultados principales de la encuesta.

Los datos recogen principalmente:

- la población total de unidades domésticas privadas, la fuerza de trabajo y los parados, por grupos de edad y sexo;
- las personas empleadas, por sexo, estatuto profesional y sector de actividad;
- horas de trabajo semanales;
- principales grupos de personas que buscan empleo, por sexo, motivos de la busca de empleo, duración de la búsqueda y sistemas utilizados.

Die Stichprobenerhebung über Arbeitskräfte wurde in Anwendung der Verordnung (EWG) Nr. 3473/88 des Rates vom 7. November 1988 im Frühjahr 1989 in allen Mitgliedstaaten der Gemeinschaft durchgeführt.

Das Statistische Amt der Europäischen Gemeinschaften faßt in dieser Veröffentlichung die wichtigsten Ergebnisse der Erhebung zusammen.

Diese beziehen sich insbesondere auf

- die Gesamtbevölkerung der privaten Haushalte, die Arbeitskräfte und Arbeitslosen nach Geschlecht und Altersgruppen;
- die Erwerbstätigen nach Geschlecht, Stellung im Beruf und Wirtschaftszweig;
- die wöchentliche Arbeitszeit;
- die wichtigsten Gruppen von Arbeitsuchenden nach Geschlecht, Ursachen, Dauer und Art der Arbeitsuche.

The labour force survey was carried out in the spring of 1989 in all Member States of the Community pursuant to Council Regulation (EEC) No 3473/88 of 7 November 1988.

In this publication, the Statistical Office of the European Communities presents the main results of the survey.

The data cover, in particular:

- the total population of private households, the labour force and unemployed persons, by sex and age group;
- employed persons by sex, professional status and branch of activity;
- weekly working hours;
- the main groups of persons seeking employment, by sex, reasons for seeking employment, duration of search and methods used.

L'enquête par sondage sur les forces de travail a été réalisée au cours du printemps de 1989 dans tous les États membres de la Communauté, en application du règlement (CEE) n° 3473/88 du Conseil, du 7 novembre 1988.

Dans la présente publication, l'Office statistique des Communautés européennes a rassemblé les principaux résultats qui concernent notamment:

- la population totale des ménages privés, les forces de travail et les chômeurs, ventilés par sexe et par tranche d'âges;
- la population active ventilée par sexe, statut professionnel et branche d'activité;
- la durée de travail hebdomadaire;
- les principaux groupes de demandeurs d'emploi, ventilés par sexe ainsi que selon la cause, la durée et les modalités de recherche d'un emploi.

L'indagine per campione sulle forze di lavoro è stata eseguita nella primavera del 1989 in applicazione del regolamento (CEE) n. 3473/88 del Consiglio del 7 novembre 1988.

Nella presente pubblicazione l'Istituto statistico delle Comunità europee espone i principali risultati dell'indagine.

Essi riguardano in particolare:

- la popolazione totale delle famiglie, le forze di lavoro e disoccupati per sesso e gruppi di età;
- la popolazione attiva per sesso, posizione nella professione e branca di attività;
- la durata settimanale del lavoro;
- i principali gruppi di persone in cerca di occupazione, per sesso, nonché le circostanze, la durata e le modalità della ricerca di occupazione.
