Eurostat hat die Aufgabe, den Informationsbedarf der Kommission und aller am Aufbau des Binnenmarktes Beteiligten mit Hilfe des europäischen statistischen Systems zu decken.

Um der Öffentlichkeit die große Menge an verfügbaren Daten zugänglich zu machen und Benutzern die Orientierung zu erleichtern, werden zwei Arten von Publikationen angeboten: Statistische Dokumente und Veröffentlichungen.

Statistische Dokumente sind für den Fachmann konzipiert und enthalten das ausführliche Datenmaterial: Bezugsdaten, bei denen die Konzepte allgemein bekannt, standardisiert und wissenschaftlich fundiert sind. Diese Daten werden in einer sehr tiefen Gliederung dargeboten. Die Statistischen Dokumente wenden sich an Fachleute, die in der Lage sind, selbständig die benötigten Daten aus der Fülle des dargebotenen Materials auszuwählen. Diese Daten sind in gedruckter Form und/oder auf Diskette, Magnetband, CD-ROM verfügbar. Statistische Dokumente unterscheiden sich auch optisch von anderen Veröffentlichungen durch den mit einer stilisierten Graphik versehenen weißen Einband.

Veröffentlichungen wenden sich an eine ganz bestimmte Zielgruppe, wie zum Beispiel an den Bildungsbereich oder an Entscheidungsträger in Politik und Verwaltung. Sie enthalten ausgewählte und auf die Bedürfnisse einer Zielgruppe abgestellte und kommentierte Informationen. Eurostat übernimmt hier also eine Art Beraterrolle.

Für einen breiteren Benutzerkreis gibt Eurostat Jahrbücher und periodische Veröffentlichungen heraus. Diese enthalten statistische Ergebnisse für eine erste Analyse sowie Hinweise auf weiteres Datenmaterial für vertiefende Untersuchungen. Diese Veröffentlichungen werden in gedruckter Form und in Datenbanken angeboten, die in Menütechnik zugänglich sind.

Um Benutzern die Datensuche zu erleichtern, hat Eurostat Themenkreise, d. h. eine Untergliederung nach Sachgebieten, eingeführt. Daneben sind sowohl die Statistischen Dokumente als auch die Veröffentlichungen in bestimmte Reihen, wie zum Beispiel „Jahrbücher“, „Konjunktur“, „Methoden“, untergliedert, um den Zugriff auf die statistischen Informationen zu erleichtern.

Y. Franchet
Generaldirektor

It is Eurostat's responsibility to use the European statistical system to meet the requirements of the Commission and all parties involved in the development of the single market.

To ensure that the vast quantity of accessible data is made widely available, and to help each user make proper use of this information, Eurostat has set up two main categories of document: statistical documents and publications.

The statistical document is aimed at specialists and provides the most complete sets of data: reference data where the methodology is well-established, standardized, uniform and scientific. These data are presented in great detail. The statistical document is intended for experts who are capable of using their own means to seek out what they require. The information is provided on paper and/or on diskette, magnetic tape, CD-ROM. The white cover sheet bears a stylized motif which distinguishes the statistical document from other publications.

The publications proper tend to be compiled for a well-defined and targeted public, such as educational circles or political and administrative decision-makers. The information in these documents is selected, sorted and annotated to suit the target public. In this instance, therefore, Eurostat works in an advisory capacity.

Where the readership is wider and less well-defined, Eurostat provides the information required for an initial analysis, such as yearbooks and periodicals which contain data permitting more in-depth studies. These publications are available on paper or in videotext databases.

To help the user focus his research, Eurostat has created 'themes', i.e. subject classifications. The statistical documents and publications are listed by series: e.g. yearbooks, short-term trends or methodology in order to facilitate access to the statistical data.

Y. Franchet
Director-General

Pour établir, évaluer ou apprécier les différentes politiques communautaires, la Commission européenne a besoin d'informations.

Eurostat a pour mission, à travers le système statistique européen, de répondre aux besoins de la Commission et de l'ensemble des personnes impliquées dans le développement du marché unique.

Pour mettre à la disposition de tous l'importante quantité de données accessibles et faire en sorte que chacun puisse s'orienter correctement dans cet ensemble, deux grandes catégories de documents ont été créées: les documents statistiques et les publications.

Le document statistique s'adresse aux spécialistes. Il fournit les données les plus complètes: données de référence où la méthodologie est bien connue, standardisée, normalisée et scientifique. Ces données sont présentées à un niveau très détaillé. Le document statistique est destiné aux experts capables de rechercher, par leurs propres moyens, les données requises. Les informations sont alors disponibles sur papier et/ou sur disquette, bande magnétique, CD-ROM. La couverture blanche ornée d'un graphisme stylisé démarque le document statistique des autres publications.

Les publications proprement dites peuvent, elles, être réalisées pour un public bien déterminé, ciblé, par exemple l'enseignement ou les décideurs politiques ou administratifs. Des informations sélectionnées, triées et commentées en fonction de ce public lui sont apportées. Eurostat joue, dès lors, le rôle de conseiller.

Dans le cas d'un public plus large, moins défini, Eurostat procure des éléments nécessaires à une première analyse, les annuaires et les périodiques, dans lesquels figurent les renseignements adéquats pour approfondir l'étude. Ces publications sont présentées sur papier ou dans des banques de données de type vidéotex.

Pour aider l'utilisateur à s'orienter dans ses recherches, Eurostat a créé les thèmes, c'est-à-dire une classification par sujet. Les documents statistiques et les publications sont répertoriés par série — par exemple, annuaire, conjoncture, méthodologie — afin de faciliter l'accès aux informations statistiques.

Preface

This publication presents the detailed results of the 1993 European Labour Force Survey conducted in the Member States of the European Union in accordance with Council Regulation (EEC) No. 3711/91 of 16 December 1991.

This survey, like preceding surveys carried out between 1983 and 1992, was based upon the International Labour Office guidelines on labour force statistics as adopted by the 13th International Conference of Labour Statisticians in 1982 and subsequently confirmed at the 14th and 15th conferences in 1987 and 1993. The fact that the methodology of the European Labour Force Survey conforms with internationally-accepted standards has assisted its development over the years into a rich and powerful source of labour force statistics. The unique application of common definitions and standardised contents for all Member States of the European Union permits the survey to be used extensively in meeting requirements with regard to labour market statistics for the social and regional development policies of the Union.

The 1993 European Labour Force Survey was the second survey in a new series. In comparison with the surveys conducted between 1983 and 1991, a number of modifications were made in 1992 in order to meet changing statistical requirements and to improve data quality and reliability at both national and regional levels. Information about the content and methodology of the survey as implemented from 1992 onwards may be found in the Eurostat publication Labour Force Survey : Methods and Definitions - 1992 Series. Some clarifications and updates to the definitions as given there are provided below in the explanatory notes to this publication.

Eurostat wishes to thank all those involved at the national statistical offices for their contribution to the survey in preparing the questionnaires, selecting the samples, conducting the interviews and transmitting the data to Eurostat. The preparation of this publication was the responsibility of the unit Population, Migration, Employment and Unemployment in the Directorate for Social and Regional Statistics and Regional Plans at Eurostat.

122	(73)	Duration of unemployment by relationship to head of household (%)	258

Explanatory notes

Organization of the survey

The content of the European Labour Force Survey is determined by the Statistical Office of the European Union (Eurostat), together with the national experts of the Member States. An agreed coding scheme is then used by the Member States in transmitting the data.

A summary presentation of the type of information covered by the survey was included in Article 4 of Council Regulation (EEC) N° 3711/91 which formed the legal basis for surveys from 1992 onwards.

The national statistical institutes are responsible for selecting the sample, preparing the questionnaires, conducting the direct interviews among households, and forwarding the results to Eurostat in accordance with the standard coding scheme.

Eurostat devises the programme for analysing the results and is responsible for processing and disseminating the information forwarded by the national institutes.

A detailed description of the sampling methods, the adjustment procedures, the definitions and the common Community coding currently used in the labour force survey is presented in the publication *Labour Force Survey – Methods and definitions, 1992 series*.

Reference period

The labour force characteristics of each person interviewed refer to his situation in a particular reference week.

As a general rule the reference week should be a normal week in spring excluding bank holidays. For countries using a fixed week such as Italy, this requirement is easy to fulfil. In some countries, however, the reference week is the one preceding the week of the interview and, as the survey extends over a period of time, the mobile reference week method is used. In this case it cannot be guaranteed that the reference week represents a normal week.

For the 1993 survey, the reference weeks were distributed within the following periods:

Belgium	May
Denmark	February–June
FR of Germany	May
Greece	April–August
Spain	April–June
France	February–April
Ireland	April–July
Italy	April
Luxembourg	May
Netherlands	January–June
Portugal	April–July
United Kingdom	March–June

Field of survey

The survey is intended to cover the whole of the resident population, i.e. all persons whose usual place of residence is in the territory of the Member States of the Community.

For technical and methodological reasons, however, it is not possible in all the countries to include the population living in collective households, i.e. persons living in homes, boarding schools, hospitals, religious institutions, workers' hostels, etc.

Consequently, for the purposes of harmonizing the field of survey, the Community results are compiled on the basis of the population of private households only. This comprises all persons living in the households surveyed during the reference week. This definition also includes persons absent from the household for short periods due to studies, holidays, illness, business trips, etc.

The sampling method was designed separately by each national statistical office in the light of the experience and practices of the individual Member States. The design adopted in each case was required by the Regulation to ensure a certain minimum reliability at regional level, expressed as follows :

the sampling plan shall guarantee that for characteristics relating to 5% of the population of working age the relative standard error at NUTS II level (or equivalent) does not exceed 8%, assuming the design effect for the variable 'unemployment.'

(Council Regulation (EEC) No. 3711/91, Article 3.2)

The number of private households for which data was finally available from each Member State, was as follows :

Belgium	32,554
Denmark	13,952
F.R. of Germany	143,070
Greece	61,026
Spain	58,438
France	72,387
Ireland	46,946
Italy	72,543
Luxembourg	5,318
Netherlands	29,725
Portugal	15,677
United Kingdom	66,329

Reliability of the results

Sampling error

As with any sample survey, the results of the labour force survey are subject to sampling error. It is almost certain that somewhat different figures would have been obtained if a

complete census had been carried out using the same questionnaires, interviewers, supervisors, data-processing techniques, etc. as those used in the labour force survey. This difference is known as the sampling error of the estimate.

In a given sample, there are basically two factors which account for the relative magnitude of the sampling error of a characteristic: the frequency with which it occurs, and the evenness with which it is distributed among the population. Of two estimates, the larger is likely to have a smaller per cent sampling error, while of two estimates of comparable size the one which refers to a characteristic more evenly spread throughout the population would, in general, be subject to smaller relative sampling variability.

In this publication results likely to have very wide margins of relative sampling variability have been replaced by a dot, while other relatively imprecise estimates are shown within brackets.

An indication of the per cent sampling error can be provided by the coefficient of variation of an estimate. Eurostat has requested the Member States to calculate the coefficient of variation for certain basic variables (employed by broad industrial group, unemployed, unemployment rates, labour force and activity rates) by sex and age. The answers received indicate that for the above mentioned variables the labour force survey provides reliable results at national level.

Survey response

A significant source of non-sampling error in the labour force survey is the effect of non-response on the results. Non-response rates range from 1 (in Italy) to 42% (in Netherlands). This rate is normally less than 10% in the countries where the survey is compulsory. Adjustment for non-response in the majority of countries was made by reweighting the results while in some cases the method used was 'duplication' or 'substitution' of units. Quality checks carried out in various countries suggest that one-person households may be under-represented in the sample as they tend to be more difficult to contact than households containing several persons.

Weighting

The 1993 survey results were weighted up to independently derived population estimates for various age, sex, region, nationality, etc. categories. More information about weighting and adjustment procedures can be found in Labour Force Survey - Methods and definitions, 1988.

Basic concepts and definitions

The concepts and definitions used in the survey are those contained in the Recommendation of the 13th International Conference of Labour Statisticians, convened in 1982 by the International Labour Organisation (and therefore referred to throughout these notes as the 'ILO guidelines'). In accordance with the ILO guidelines, the definitions given below are applied. All these definitions apply to persons aged 15 years and over, living in private households.

Persons in employment are those who during the reference week did any work for pay or profit, or were not working but had jobs from which they were temporarily absent. Family workers are also included.

Unemployed persons are those who, during the reference week :

- (a) had no employment, and
- (b) were available to start work within the next two weeks, and

(c) had actively sought employment at some time during the previous four weeks.

In addition, unemployed persons include those who had no employment and had already found a job to start later.

Duration of unemployment is defined as:

- (a) the duration of search for a job, or
- (b) the length of the period since the last job was held (if this period is shorter than the duration of search for a job).

The labour force is defined as the sum of persons in employment and unemployed persons.

Inactive persons are those who are not classified as persons in employment nor as unemployed persons.

Activity rates represent the labour force as a percentage of the population of working age.

Employment/population ratios represent persons in employment as a percentage of the population of working age.

Unemployment rates represent unemployed persons as a percentage of the labour force.

The above rates are usually calculated for sex/age groups and sometimes further cross-classified by other demographic variables.

Application of the concepts

As discussed below, the revision of the survey in 1992 included a number of modifications designed to ensure a more exact application of the ILO guidelines. This application modifies certain aspects of the text in the publication Labour Force Survey - Methods and Definitions, 1992 series. In terms of the codification as presented in that publication, the definitions of employed and unemployed persons may be expressed as follows :

Employed :

(Column 13 = '1') or (Column 13 = '2' and (Column 14 NE '7'))

Unemployed :

((Column 13 = '3' or '5') and (Column 77 = '1') and (Column 73 = '01' or '02' or '03' or '04' or '05' or '06' or '07' or '08' or '12'))

or ((Column 13 = '2' and Column 14 = '7') or (Column 13 = '5' and Column 69 = '2'))

Comparability with previous surveys

The concepts and definitions used in the European Labour Force Survey have been derived from the ILO guidelines since 1983. This has guaranteed the comparability of the results between all the surveys held since that year. The results of surveys held before 1983 are not comparable since they were not based upon these guidelines.

The integration into the 1992 series of a more exact implementation of the guidelines implies that the degree of comparability between the 1983-91 series and the new series from 1992 is slightly less than the comparability within each series. However, the fact that both sets of definitions continue to rest upon the ILO guidelines ensures that the differences are minimal.

The definition of the population of working age has been modified to apply to persons aged 15 years or older (instead of 14 years as in the previous series).

The definition of employed persons in the two series is identical.

The definition of unemployed persons contains the following differences:

(a) Persons seeking work as self-employed are now considered unemployed only if they satisfy the same criteria of seeking work and availability for work, as persons seeking work as employees. Before 1992, these criteria were not applied for this small group.

(b) Persons not at work and hoping to be re-engaged by a former employer ('temporary lay-offs') are similarly now considered as unemployed only if they satisfy the usual criteria of seeking work and availability for work, which were not previously applied.

(c) Persons without employment are considered as unemployed only if they are available for work and have used an active method of job-search within the reference period as specified by the ILO guidelines. The questionnaires were therefore modified to permit active methods to be distinguished separately. In the absence of comparative data from both the old and new sets of questions, it is difficult to estimate the effect of this change, but most Member States considered that the category of unemployed already comprised exclusively persons actively seeking work.

Implementation of the survey at national level

Germany was not able to provide data on economic activity according to the new NACE Rev1 classification; Germany was only able to provide NACE 1970 and a conversion has been done.

There are still some difficulties in the conversion between the national classifications on occupations and the ISCO-88 (COM) but some progress was made and it is hoped that this information will become more consistent in future years.

In addition some countries have adopted different and not always comparable approaches concerning the allocation of national qualifications to the different levels of education as defined by Eurostat. For this reason, data on ISCED is only available for three categories. Data for Italy is not comparable

with the other countries in tables 29, 30 and 31. In the same tables, Germany has a very high rate of non-response. This is due to the fact that the answer to education questions is not compulsory. ISCED 3 is underestimated for Ireland due to the nature of the Irish questionnaire which does not provide information on specific vocational training.

In Denmark the sample unit is the individual instead of the household. The other members of the household are identified from the registers. Additionally, from 1992 onwards, a family can be constituted by a couple (married or cohabiting) with or without children. With this definition, a family cannot be constituted of more than two generations.

In France, the new questions implemented in 1992 are put to the section of the sample which is interviewed using computers. The part of the sample interviewed using computers is larger in 1993 than it was in 1992 but the non-responses rates for some variables are still high.

In the Netherlands, the ILO guidelines have not been strictly observed in respect of the one-hour criterion on employment, so that certain figures have had to be imputed. In addition part-time work in the Netherlands is higher than for other member states due to the nature of the Dutch questionnaire.

For Luxembourg data on the 'degree of urbanisation' was not provided. It is hoped to rectify this omission in subsequent surveys.

In the United Kingdom persons shown as 'registered unemployed' are, in fact, claimants to unemployment benefit. Data on recipients of unemployment benefit are not available

Contents of this publication

The revision of the list of tables in 1992 means that the numbering of the tables no longer corresponds with that which was used for the surveys between 1983 and 1991. To facilitate reference to earlier publications, the previously-used table numbers (where appropriate) have been indicated in the table of contents. In making such comparisons, it should be borne in mind that certain definition changes have taken place, so that for example the working-age population now comprises everyone aged 15 years and over (instead of 14 as previously).

It should be noted that certain tables showing absolute figures do not show the category 'not stated' in the breakdown, thus it is possible that the aggregate of the breakdown does not correspond to the total.

European Commission

Labour force survey — Results 1993

Luxembourg: Office for Official Publications of the European Communities, 1995

1995 – 259 pp. – 21 x 29.7 cm

Theme 3: Population and social conditions (yellow)

Series C: Accounts and surveys

ISBN 92-827-4240-7

Price (excluding VAT) in Luxembourg: ECU 25

The labour force survey was carried out in the spring of 1993 in all Member States of the Community pursuant to Council Regulation (EEC) No 3711/91 of 16 December 1991.

In this publication, the Statistical Office of the European Communities presents the main results of the survey.

The data cover, in particular:

- the total population of private households, the labour force and unemployed persons, by sex and age group;
- employed persons by sex, professional status and branch of activity;
- weekly working hours;
- the main groups of persons seeking employment, by sex, reasons for seeking employment, duration of search and methods used.
