

1989 □ 7

### The cattle population in December 1988

#### Figures down again (perhaps for the last time?)

In December 1988 the European **cattle population fell** again by **1.5%**. As the graph on the last page shows, the population, at approximately 78.3 million head, is the lowest recorded in Community statistics since 1972 (figures before this date are not necessarily comparable, as harmonisation was first launched then).

However this is not a universal trend: Belgium, Ireland, the Netherlands and the United Kingdom, where the population was still falling in the middle of 1988, recorded a slight upturn for the first time in a long while. The upward trend in Portugal recorded in June 1988 continued.

The turnaround just starting is the result of a much improved situation in the market for beef and veal: a drop in slaughtering figures and a reduction of stocks caused prices to rise from the beginning of 1988. In one year the prices of adult beef carcasses have increased by approximately 10% and veal by almost 20%.

The effects of further reductions in milk production decided in December 1986 and covering the years 1987/88 and 1988/89 are tangible: the number of **dairy cows** fell once again in all countries (except Portugal) and is **-2.7%** for EUR 12.

The category of "other cows" continued to grow: in all countries except France the population was on the increase, sometimes at an extraordinary rate (up to + 27% in Ireland). The fact that the situation has not yet picked up in France, which holds almost half of this category, has kept the rise for EUR 12 down to a mere **3.6%**.

Despite the considerable reduction in the numbers of dairy cows recorded since 1984, they still represent **76%** of the **total number of cows**. This is why the fall recorded in the dairy cow population has a predominant effect on the total number of cows, which dropped once more by 420 000 (**-1.3%**).

The table below depicts the trends in the three categories for EUR 10 since December 1983 (the last year before the dairy quotas, when cattle populations hit their peak). The total population has gone down by 7.8 million head (-9.8%). The largest milk producers were hit hardest, Denmark losing over a fifth of its population, and the Netherlands and France almost a seventh. The percentage fall in the dairy population (-15.5%) tallies roughly with the increase in "other cows" (+11.8%). Overall the number of cows in Europe (EUR 10) has fallen by 3.4 million head or 10.6% in five years.

Cattle population: development between December 1983 and 1988  
(in 1 000 head)

Hardly surprisingly, the drop in the total population is felt in almost all categories of animals, but there are exceptions which deserve a mention: apart from the "other cows" category which is dealt with above, these are heifers of two years and over (+ 0.9%) and animals less than a year old not for slaughter as veal (no change). These two exceptions may well herald an increase in the breeding population in the near future.

#### Production in 1989

With a population which is still on the decline and in the throes of restructuring, the fall in production is expected to continue this year.

Results for 1988 - in many cases still provisional - reveal a drop in supply of 7.2% for adult cattle, mainly due to the figures for heifers (-12.3%) and cows (-12%). The production of male cattle (gross indigenous

production = slaughterings + exports - imports of live animals) decreased only very slightly compared with 1987 (-1.6%), whilst the figure for calves fell by over 11%.

The drop in supply in 1989 ought, however, to be on a smaller scale, estimated by national experts at below 2% for adult cattle and a little less than 6% for calves.

It should be borne in mind that the forecasts in the tables following are expressed in thousands of head. Supply, expressed in tonnes, depends on the average weight of animals for slaughter. In several Member States the carcass weight in 1988 went up for various reasons. It is, however, difficult to determine whether this trend will continue in 1989 as the price increase, which would normally last all year, might cause some breeders to change their minds about the best time for slaughtering.

N.B. In the population tables the 1987 figures for Greece have been repeated for 1988 as no information was available within the time limits.
