Surveys on the cattle, pig, sheep and goat livestock population carried out in the EU in December 1996

First results at EU level and by Member State Forecasts of gross indigenous production for meat

CATTLE:

In December 1996 there were 84.1 million cattle in the European Union (EU). Compared to December 1995 this is a decline in herd size of around 700 000 head or 0.8%. This decline can be seen in most countries except, most notably in Spain, where the livestock population was restored after the drought of 1995 and Ireland where the population has continued to grow throughout the past 4 years. The number of cattle

for slaughter, male and female, has declined slightly everywhere. There has been a reduction in the number of dairy cows of 2% but the number of suckler cows and heifers continues to increase.

The reduction of approximately 1.5% in the gross indigenous production (in head) of cattle in the EU in 1996 compared to 1995, due to the Bovine Spongiform Encephalopathy (BSE) crisis, is expected to continue with a further reduction of 1.8% in

Cattle, pig, sheep and goat population per Member State p 12

1997 and persist in this trend into the first half of 1998.

PIGS:

The pig population has passed the 118 million head mark. Between December 1995 and December 1996 there was an increase in population of 1.9%. This follows two years of declining pig numbers. The increase is due to higher demand for pig meat

(Continued from the first page)

following the BSE crisis. At Union level the increase in the number of piglets, young pigs and young mated sows should lead to increase in production of 1% to 2% throughout 1997. This increase is expected in the majority of large pig producing countries except Italy and the Netherlands.

SHEEP:

The decline in the sheep livestock population in the EU continues. The population stands at 94 million head in December 1996. In the last 3 years the numbers have declined by around 5 million head. Amongst the main producing countries, Greece and Ireland have lost nearly 10% of their sheep herd since 1993. At the same time the United Kingdom, which is by far the principal sheep producer in the EU, has seen its flock reduced by 5%. In Spain, the herd size has been partially restored after the reduction in 1995 due to drought. France observed an increase in the number of milk ewes in the areas renowned for ewes' cheese whereas in the case of sheep for slaughter there was a tendency towards a reduction in livestock. For the past two years there has also been a strong increase in the sheep population in the Netherlands. In 1997 the slaughterings of sheep is expected to decline by 2.8% at EU level following a similar reduction in 1996.

GOATS:

There are estimated to be 11.7 million goats in the EU at December 1996. This is a reduction of 1.5% in one year following a large reduction (4.5%) of numbers in Greece which has half of the EU goat population. In

Spain and Italy production has stabilized after a large reduction in 1995. In France the population grows on at the rate of 2% to 3% per year. The forecasts for gross domestic production of goat meat show a slight reduction compared to 1996.
