Pig herds still at record levels .1

Pig production to continue on upward trend in 1999; downturn not expected until mid-year .....2

### Pig herds still at record levels

According to the November/December 1998 surveys, the total number of pigs in the European Union (EU15) was 125.5 million, an increase of 6.6 million (5.5%) over the same period of 1997. Since August 1998, however, the pig population has been fairly stable (minus 0.5 million). The EU's pig population in December 1997 had been almost the same as in December 1996: the large decline in NL (caused by the outbreak of classical swine fever) had been offset by increases of between 1.5% and 5% in most other Member States. The recovery of production in NL, which began in 1998 Q2, was not, however, accompanied by a corresponding decline in pig herds in the other Member States. Hence the above-mentioned overall increase of 5.5%, a figure which in fact masks widely varying changes in individual Member States.

In 1998, the five biggest producer countries (DK, D, E, F and NL),<sup>1</sup> which account for 71% of the total pig population, increased their herds by 6.6 million head (which was the same as the overall net increase in EU15): DK +0.5 million (4.3%), D +1.5 million (6.1%), E +2.2 million (11.5%), F +0.4 million (2.6%) and NL + 2 million (17.3%). The UK was alone in recording a major decline (-0.5 million, or -6%). The changes in the other Member States ranged between -1.3% and +9.8%, their net increase compensating for the decline in the UK. Overproduction and difficulties in non-EU export markets severely depressed pig prices in 1998, especially in H2. UK producers made the biggest reductions in herd sizes in response to declining prices. EL, I, P and S reduced their herd sizes slightly, whereas changes in production in the other Member States impacted only on the number of breeding sows.

The number of breeding sows in EU15 increased by +1.1% in 1998. Again, the picture varied between Member States, with the UK and S reducing their herds the most dramatically (-12.7% and -9.1% respectively). IRL, I, NL, A and P also reduced the number of breeding sows by between -1.7% (I) and -3.8% (NL). It remains to be seen whether the reduction in NL will prevent that country's pig population from recovering to the level seen before the outbreak of classical swine fever. The number of breeding sows in F was practically unchanged. B, D, and L recorded increases of between 0.6% and 2.0%. DK and FIN recorded bigger increases (4.2% and 4.4% respectively). EL recorded the biggest percentage growth (+15.8%), but the 10.9% increase in the number of breeding sows in E (250 000 head in absolute terms), suggests fundamental changes in the level of self-sufficiency in the EU's second-biggest pig producer after D.

<sup>1</sup> Abbreviations used for the names of the Member States: B = Belgium, DK = Denmark, D = Germany, EL = Greece, E = Spain, F = France, IRL = Ireland, I = Italy, L = Luxembourg, NL = Netherlands, A = Austria, P = Portugal, FIN = Finland, S = Sweden, UK = United Kingdom.

It should be pointed out that, as from 1998, F and D changed their survey dates to November. This needs to be borne in mind when comparing the results with those obtained in December 1997.

### Pig production to continue on upward trend in 1999; downturn not expected until mid-year

Gross indigenous production (GIP) of pigs in the European Union increased by 7.5% between 1997 and 1998, whereas it had been practically unchanged between 1996 and 1997. 93% of the absolute increase (14.3 million head) in 1998 was accounted for by the six biggest producer countries: DK (+1.7 million head, or +7.9%), D (+1.8 million, or +4.9%), E (+2.5 million, or +8.5%), F (+1.0 million, or +3.8%), NL (+5.4 million, or +33.4%) and the UK (+0.9 million, or +6%). Only Italy saw its GIP decline in 1998 (-1.0%). All the Member States raised their production compared with 1997, including NL, where a +33.4% surge represented a recovery from the classical swine fever epidemic.

Pursuant to Council Directive 93/23/EEC, the Member States forwarded their production forecasts for the first three quarters of 1999 in February of that year. Six Member States were also able to provide forecasts for Q4. With the assistance of DG VI's market experts, Eurostat used these forecasts to estimate trends in GIP in all the Member States and in EU15 for 1999 as a

whole. An overall increase of 2.9% is expected for 1999, with increases of +8% in Q1 and +5.7% in Q2. Not until Q3 is the rate of growth expected to slow significantly (to +0.8%). GIP is expected to stabilise (-2.1%) in Q4.

First-quarter declines are expected in EL, I, P, S and the UK, the biggest declines being anticipated in S (-7.2%) and the UK (-11.7%). D, F and A can expect production to rise in the first two quarters compared with the same periods of 1998, but to decline from Q3 onwards, giving an overall annual increase of about 1.5%. In DK (+3.2% annual growth) and FIN (+3.4%), production is not expected to stabilise until Q4. Annual increases of +9.6% in IRL and, more especially, +12.9% in E (where growth should continue into Q4), suggest that the crisis in the pig sector is not adversely affecting production in those countries. In NL, the first two quarters of 1999 are expected to show increases of 38.3% and 24.2% compared with the same periods of 1998, when production levels were still severely affected by classical swine fever. Production is expected to adjust to normal conditions in Q3 (-2.7%) and Q4 (-11.6%), with the net result that NL will not quite reach the production level seen in 1996, the year before the outbreak of the classical swine fever epidemic.

1999 looks like being another difficult year for the EU's pig producers, although supply is finally expected to stabilise in the last four months of the year.
