## INDUSTRIAL PRODUCTION

### Orig. French

Slight drop in July

According to Eurostat estimates, industrial production in the European Community increased by 4.3% between July 1978 and July 1979. The rise in production is thus similar to that for April and May but lower than for June. The seasonally adjusted index of industrial production dropped slightly in July (- 0.6%). Caution must, however, be exercised in analysing the July data as they include a Eurostat estimate for France (I) and the seasonal indices may not immediately reflect any change in holiday patterns (an increase in the length of annual holidays could result in underestimation of the index).

Subject to these reservations, industrial production decreased in July in all Member States with the exception of Italy and Denmark. The short-term production growth rate (cf. table II, %A) fell in July for the Community as a whole and for most of the Member States (Germany, Netherlands, Belgium, United Kingdom, Luxembourg). At Community level, this lower rate of short-term growth is also apparent in the three groups of industrial branches – intermediate products, capital goods and consumer goods.

- (I) The INSEE (Paris) calculates the index of industrial production for July at the same time as the August index, i.e. one month later than usual.
