INDEX OF INDUSTRIAL PRODUCTION

Stronger industrial production growth in November 1979

The unadjusted index of industrial production for the European Community is estimated to have reached the level of 128.8 (1975=100) in November 1979, and to have risen by 4.2% over the figure recorded for the corresponding month of the previous year. This increase matches those registered in August and September on the same basis of calculation and shows a marked improvement on the low return for October (+ 3%). However in taking a longer term perspective, it is clear that the growth rates recorded over the last four months are significantly down on the results which appeared during the first half of the year suggesting that a turning point in the level of economic activity has already been passed. Further evidence in support of this hypothesis can be derived from an examination of the development of the twelve month moving average rate of growth of the index of industrial production. This growth measure, which is the least responsive to short-term changes in the economic and industrial climate, increased steadily from April 1978 to reach 5% in September 1979, but in the last two months has fallen back slightly to register a year on year increase of only 4.7% in November.

On a seasonally adjusted basis, the index of industrial production attained the level of 119.1 (1975=100) in November 1979, a rise of 1.4% over the figure registered in October. This follows monthly changes of - 1.0%, + 1.2% and - 0.4% recorded in August, September and October respectively. These erratic monthly movements in the seasonally adjusted index are difficult to interpret and are in any case less indicative of underlying growth patterns than developments in short-term trend rates of industrial production growth (%A - see table 2). Returns for November show that 'short-term' growth rates increased significantly in the Community with all three major product regroupments recording improved results. At the Member State level, 'trend' rates of growth increased sharply in Germany, Italy and Denmark, but weakened in France, suggesting a loss of momentum following the country's strong, recent growth performance. In the United Kingdom trend rates of growth remained negative for the third consecutive month, due in large part to the distorting influence of industrial disputes on the data collected.

N O T I C E T O R E A D E R S

EUROSTAT is planning to redesign the bulletin 'Industrial short-term trends' within the next few months. In order to take into account user requirements and interests to the greatest extent possible, EUROSTAT would be grateful if readers would complete the attached questionnaire and return it to the above address by return of post.

1. Among the alternatives outlined below, please indicate the order of your preferences. There should be:

- No change in the current format of the monthly bulletin — i.e. presentation of data by indicator should continue.
- A new sectorial presentation — i.e. regroupment of indicators by branch.
- A comprehensive quarterly bulletin covering a wide range of branches only.
- Wide branch coverage every three months supplemented by short monthly bulletins with commentary and data on the main industrial regroupments.

2. More generally,

- Do you find the monthly commentaries useful? Yes/No
- Do you find the graphical material useful? Yes/No
- Would you prefer additional texts/commentary material and/or graphs to replace some statistical tables? Yes/No

3. Finally,

- Do you pay greater attention to the global or branch data?
- If you are more interested in the branch data, please indicate the industries to which you pay the greatest attention.

4. Do you have any additional remarks to make, or specific requirements which are not satisfied by the current publication? If so, please add your comments here.
