Monthly

## INDEX OF INDUSTRIAL PRODUCTION

### Reduction in EUR-9 short-term trend rate of growth

Eurostat estimates the seasonally adjusted index of industrial production for the European Community to have reached the level of 119.3 (1975 = 100) in February 1980, and to have fallen very slightly (-0.1%) against the figure recorded in the previous month. This follows monthly changes in the seasonally adjusted index of +1.1% and -0.9% in December 1979 and January 1980 respectively and suggests that taking the last three months as a whole production has been rather flat. At the product regroupment level, monthly seasonally adjusted production in the Community's intermediate goods industries slipped by -0.7% to 123.8 (1975 = 100) in February whilst in the consumer goods sector the index fell by -0.3% to 120.1. Continuing its tradition of registering large and erratic month to month changes the adjusted index of production in the investment goods sector increased by 2.4% in February to attain the level of 110.9, after falling by 7.6% in January and increasing by 5.2% in December. These movements are explained to a large extent by the exceptionally high rates of activity in French and German investment goods industries in December, and by comparatively low production in the same two countries in January.

According to the latest data on short-term growth trends (see table 2), the recent upturn in Community industrial production growth was checked in February following an uninterrupted rise from October 1979. Developments in the Community's intermediate, investment, and consumer goods sectors mirrored the downward movement in short-term growth in the all-industries index. At the member state level there was a sharp drop in short-term growth in Germany, Italy, Denmark and the United Kingdom in February, whilst in France and Luxembourg developments moved in a more favourable direction. However as can be seen from table 2 the influence of the adverse growth trends in the former group of countries on the EUR-9 index significantly outweighed the positive developments which took place elsewhere.

Finally it should be noted that as a result of further modifications and revisions in base data, the EUR-9 index of industrial production is now calculated as having risen by 4.7% in 1979 instead of 4.4% as previously indicated. The main explanation behind this revised upward estimate lies in the alterations made to the French data. These now reveal that industrial production grew by 3.2% in France in 1979 against the figure of 1.9% which was published previously.

-----

1. Significance of growth rates A and B

— per working day:

- A last 12 months with respect to preceeding 12 months;
- B latest month with respect to the corresponding month of the previous year;

— seasonally adjusted:

- A last 3 months with respect to the preceeding 3 months;
- B latest month with respect to the previous month.

2. Methodological notes relating to the tables are published as supplements to the monthly bulletin.

3. For additional information on the Index of Industrial Production contact EUROSTAT, tel.: 4301-3264 or 4301-3450.

For additional information on all other indicators contact EUROSTAT, tel.: 4301-3521 or 4301-3450.

4. N.B. : indicates that data are not available;  
— indicates a non-existent series.
