

INDUSTRIAL SHORT-TERM TRENDS

Monthly

INDEX OF INDUSTRIAL PRODUCTION

Weakening in EUR-9 industrial production growth trends

The unadjusted index of industrial production for the European Community is estimated by EUROSTAT to have attained the level of 126.6 (1975=100) in March 1980, an increase of 3.4% over the corresponding month of the previous year. This follows yearly rises of 6.8% (June 1979), 4.7% (September 1979) and 4.1% (December 1979) calculated on the same basis, and suggests that the underlying level of industrial activity in the European Community has been slowing down gradually, if unevenly, over the last three quarters.

Turning to short-term trends in industrial output, the latest data show the seasonally adjusted EUR-9 index to have reached 120.5 (1975=100) in March 1980, an increase of 1.0% over the figure recorded in February. The rise in the index was due primarily to an improved production performance in the Community's intermediate goods industries and to a lesser degree to the small increase in monthly growth in the consumer goods sector. These developments offset the sharp fall in monthly growth in the investment goods industries. Broadening the picture to include the analysis of three monthly growth trends in the seasonally adjusted indices (see table II), it can be seen that over the last two months there has been a fairly sharp reduction in short-term growth in the EUR-9 index, due primarily to worsening trends in the investment goods sector. Over the last quarter growth in this group of industries has fallen rapidly and a negative outturn was recorded in March for the first time in twelve months. Short-term growth trends in the Community's intermediate goods sector have been uncertain in recent months but viewed from a longer-term perspective the results are clearly well below those recorded during expansionary phases in economic activity, whilst in the consumer goods industries short-term growth rates remained at a reasonable level and fairly stable during the first few months of 1980. This is in contrast to the weaker trends noticed in this sector in the third and fourth quarters of 1979.

At the Member State level, short-term industrial production growth rates in March fell and became negative in the United Kingdom and Denmark, weakened but remained positive in Germany and Luxembourg, remained roughly stable in France and Italy, and improved in the Netherlands. In nearly all countries (except Luxembourg) the latest results for the investment goods sector were especially unfavourable, with sharp downturns in activity often leading to negative growth. Elsewhere, production in the intermediate goods industries appeared to be reasonably firmly based in Germany, France, Luxembourg and Italy, but negative short-term growth rates were recorded in the United Kingdom and Denmark. In the consumer goods sector production trends were quite favourable in France, Italy and Denmark, but weak in Germany and the United Kingdom.

N O T E S

1. Significance of growth rates A and B

— per working day:

- A last 12 months with respect to preceeding 12 months;
- B latest month with respect to the corresponding month of the previous year;

— seasonally adjusted:

- A last 3 months with respect to the preceeding 3 months;
- B latest month with respect to the previous month.

2. Methodological notes relating to the tables are published as supplements to the monthly bulletin.

3. For additional information on the Index of Industrial Production contact EUROSTAT, tel.: 4301-3264 or 4301-3450.

For additional information on all other indicators contact EUROSTAT, tel.: 4301-3521 or 4301-3450.

4. N.B. : indicates that data are not available;
— indicates a non-existent series.
