

# INDUSTRIAL SHORT-TERM TRENDS

Monthly

## INDEX OF INDUSTRIAL PRODUCTION

Eurostat estimates Community industrial production to have fallen by 0.8% in 1980

The unadjusted index of industrial production for the European Community is estimated provisionally by EUROSTAT to have attained the level of 115.7 (1975=100) in December 1980, a fall of 5.7% over the corresponding month of the previous year. This is the seventh successive month in which the unadjusted Community index has been below the level recorded a year before, a factor which is reflected also in the downward movement of long term growth trends (the rates of change in the unadjusted index of industrial production over the last twelve months compared to the previous twelve months). These data show in addition that industrial production in the Community fell by approximately 0.8% in 1980 following growth of 2.3% in 1978 and 5% in 1979. At the product regroupment level the annual growth rates in Community production were quite different : in the investment goods industries growth in 1980 was 3.2% compared to 3.6% in 1979 whilst in the consumer goods sector production fell by 1% in 1980 having risen by 3.9% in the previous year. A sharper fall in annual production growth took place in the intermediate goods sector where a drop of 2.3% in production was registered in 1980 after a rise of 6.3% in the previous year.

Significant variations in the annual growth rates in total industrial production by member state in 1980 are also noticeable with rates varying from +4% (Italy) at one extreme, to -6.8% (United Kingdom) at the other. The rate of growth of industrial production for five countries fell within the range of -1% to +1% - Germany (-0.1%), Denmark (-0.1%), Netherlands (-0.2%), France (-0.5%) and Belgium (approximately +1%). All countries experienced a sharp fall in growth compared to the results recorded in the previous year, with the biggest turnaround in growth performance being recorded in the United Kingdom (+3.7% growth in 1979 to -6.8% in 1980), Luxembourg (+3.4% in 1979 to -3.3% in 1980) and Germany (+5.5% growth in 1979 to -0.1% in 1980).

### Employment and productivity trends :

The influence of the sharp downturn in Community industrial production during 1980 on employment levels is shown graphically for the principal industrial product regroupments on page 5 of this report. A graph is also presented on "productivity" trends (production per person employed), which shows the relative performance of the Community's main industrial aggregates.
