Monthly

## INDEX OF INDUSTRIAL PRODUCTION

### Stable production in the third quarter, but signs of weakening in August and September

The provisional index of industrial production in the Community for September 1981, which is based on figures provided by five countries (Federal Republic of Germany, France, the Netherlands, Italy, United Kingdom), stood at 114,7 (1975=100). This means that it has fallen by 0,6% against the figure for the same month of 1980, which followed a period of severe falloff in industrial production. The overall fall for the third quarter of 1981 amounts to 1,7% with respect to the same quarter of the previous year.

The seasonally adjusted September index is 112,6. Although this represents a slight rise in comparison with the August figure (+0,3%), the seasonally adjusted indices for the last two months are the lowest recorded since January. After seasonal adjustment, industrial production in the third quarter has remained more or less at the level for the second quarter (-0,2%, see table II: comparison of average seasonally adjusted indices for the last three months with the preceding three months), even though the cumulative effect of the falls observed since the beginning of the year (-0,3% in the first quarter, -0,3% in the second and now -0,2% in the third) means that there has been a drop of approximately 1% compared to the figure for the end of 1980.

The main causes for the downturn in the Community index over the past two months clearly emerge from an examination of national trends in the four major countries: the seasonally adjusted index for Italy showed a fall of almost 12% in August, but recovered in September to reach the level for preceding months, whereas in September it was the turn of German production to show a marked decline (almost 3%). This resulted for both Italy and the Federal Republic of Germany in a fairly clear downward trend (-1,7% and -1,5% respectively) (see table II), which contrasts with the fairly marked trend towards recovery observed in the past few months in France and the United Kingdom (+1,8% and +2,7% respectively in September).

As far as the three main groups of industrial products are concerned, one notes since the beginning of the third quarter 1981 a clear improvement of the trends in both intermediate products (see table II: +0,8% in September against -0,1% in July), and consumer goods (from -0,7% in July to 0,2% in September), whereas the trend in investment goods is now clearly downward (-1,2% in September).

N O T E S

1. Meaning of the trend in the graphs:  
3-month moving average of seasonally adjusted indices.
2. Meaning of growth rates A and B:
  - per working day:
    - A last 12 months with respect to preceding 12 months;
    - B latest month with respect to the corresponding month of the previous year;
  - seasonally adjusted:
    - A last 3 months with respect to the preceding 3 months;
    - B latest month with respect to the previous month.
3. Methodological notes relating to the tables are published as supplements to the monthly bulletin.
4. For additional information on the Index of Industrial Production contact EUROSTAT, tel.: 4301-2808 or 4301-3208.  
For additional information on all other indicators contact EUROSTAT, tel.: 4301-3521 or 4301-3208.
5. N.B. : indicates that data are not available;  
- indicates a non-existent series.
