

INDUSTRIAL SHORT-TERM TRENDS

Monthly

INDEX OF INDUSTRIAL PRODUCTION

Trend of industrial production steady on the whole

The provisional index of industrial production in the Community for October 1981 stood at 118.5 (1975=100), corresponding to a rise of 0.5% against the same month of 1980 and thus confirming the 0.9% rise (also against the same month of 1980) in the revised index for September. It should be pointed out that these two successive rises are the first ones recorded since mid-1980.

After seasonal adjustment, the October 1981 index, like the September one, stood at 114.1, which is the highest level reached since the beginning of the year, with the exception of February. In spite of that, the short-term growth indicator (see Table II : comparison of average seasonally adjusted indices for the last three months with the preceding three months) stood at zero in October. The main reason for this was the low level of industrial production in August.

As for trends in the Member States, the main feature is a sustained upturn in France and the United Kingdom, where the growth indicators (see Table II) were, respectively, 1.1% and 3.8% in October, whereas in the Federal Republic of Germany production would appear to be stabilizing at approximately the level recorded during the third quarter of 1981. Industrial production in Italy, on the other hand, after registering a temporary but notable fall in August (-12 points as compared with the previous month, after seasonal adjustment) declined again during October 1981 (by more than 5 points compared with the September figure), resulting in a pronounced negative growth rate (-3.7% in October).

Note to our readers

1. In a supplement to No 12-1981 of 'Industrial short-term trends', EUROSTAT will be publishing retrospective data on the index of industrial production for industry as a whole, the intermediate products industries, the investment goods industries, the consumer goods industries and 34 industrial branches for the Community of Nine and the Member States. These data, the monthly figures for which are both raw and seasonally adjusted, begin in 1975 (the base year) and include the most recent information available at the time of going to press.
2. New publication 'Industrial production'

EUROSTAT is resuming dissemination of statistics on industrial production by products, in physical units. This new publication will come out in the spring of 1982. Meanwhile, an internal document containing data from 1975 onwards for most of the industrial products listed in the former Quarterly Bulletin of Industrial Production (the last issue of which was No 3/4-1978) is available free of charge and may be obtained by writing to :

N O T E S

1. Meaning of the trend in the graphs:
3-month moving average of seasonally adjusted indices.
2. Meaning of growth rates A and B:
 - per working day:
 - A last 12 months with respect to preceding 12 months;
 - B latest month with respect to the corresponding month of the previous year;
 - seasonally adjusted:
 - A last 3 months with respect to the preceding 3 months;
 - B latest month with respect to the previous month.
3. Methodological notes relating to the tables are published as supplements to the monthly bulletin.
4. For additional information on the Index of Industrial Production contact EUROSTAT, tel.: 4301-2808 or 4301-3208.
For additional information on all other indicators contact EUROSTAT, tel.: 4301-3521 or 4301-3208.
5. N.B. : indicates that data are not available;
- indicates a non-existent series.
