

INDUSTRIAL SHORT-TERM TRENDS

Monthly

INDEX OF INDUSTRIAL PRODUCTION

Quite a substantial decline in Community industrial production in March 1982; no sign of recovery in the 1st quarter of 1982

The provisional index of industrial production in the Community for March 1982 stood at 119.4 (1975=100), representing a fall of 0.9% compared with March 1981 following the decline recorded in February (-0.6% compared with February 1981). The rise in January 1982 (+1.7% over the same month in 1981) has thus gradually been cancelled out to leave an average index for the whole of the first quarter of 1982 similar to that of the corresponding period in 1981.

The seasonally adjusted March index fell by 1.5% compared with January and February 1982, and at 113.1 (1975=100) it is below the depressed level of December 1981. The average seasonally adjusted quarterly index has shown hardly any change from one quarter to the next since the autumn of 1980, which illustrates the persistence of the stagnation characterizing industrial production (cf. also the curve of the quarterly moving average of the adjusted index in the graphs). In fact one obtains the following quarterly rates of change : -1.1% for the 4th quarter of 1980; +0.2%, 0%, -0.2% and 0% for the four quarters of 1981; +0.1% for the first quarter of 1982.

Since the March index was calculated provisionally on the basis of six countries (the four major countries, the Netherlands and Luxembourg), the decline in that month is clearly a result of the fall in the production in the FR of Germany (-3 percentage points, adjusted, compared with February), of Italy (-2.2 percentage points) and, to a lesser degree, of France (-0.3 percentage points), whereas there was a slight rise in the United Kingdom (+0.8 percentage points). In this latter country, however, the recovery which has been observed since the summer of 1981 appears to be limited, to judge from the short-term growth indicator (cf. the adjusted indices, %A:ratio of the last three months to the previous three months), which has become negative since February (March 1982 : -0.4%).

Note for the reader:

Extracts from NACE (General Industrial Classification of Economic Activities within the European Communities) and a definition with reference to NACE, of the three major groups of industrial products : intermediate goods, capital goods and consumer goods, are appended to this bulletin.

N O T E S

1. NOMENCLATURE OF INDUSTRIAL ACTIVITIES

The indices included in this bulletin cover industry as it is defined in divisions 1 to 4 of the General Industrial Classification of Economic Activities within the European Communities (NACE). In part III of the bulletin there are also some indicators relating to NACE division 5 (building and civil engineering). An extract of divisions 1 to 4 of NACE can be found in appendix I to this issue.

2. INDICES OF PRODUCTION

2.a The index of production reflects changes in the volume of production. For industry as a whole, it also indicates changes in volume (at constant prices) in the gross added value created by industry, the branch indices being aggregated (like the aggregation at Community level for a given industrial branch) by means of a system of weighting according to gross added value (in principle, at factor costs). The indices are adjusted in two stages: first they are adjusted to take account of the varying number of working days in the month and this is followed by seasonal adjustment according to EUROSTAT's own particular method.

Further information on the index of production may be obtained from supplement 01.1978 of this bulletin.

2.b Meaning of %A and %B:

2.b.1 indices of production per working day:

- %A: the last twelve months as compared with the previous twelve months;
- %B: the last month as compared with the corresponding month of the previous year.

2.b.2 seasonally adjusted indices of production:

- %A (short-term growth): the last three months as compared with the previous three months;
- %B: the last month as compared with the previous month.

2.c The descriptions and definitions in 2.a and 2.b above are also applicable to the indices of production for building and civil engineering.

2.d The indices of production for non-Member States (Spain, Portugal, the United States and Japan) are taken from OECD sources. The indices for Spain and Japan are not adjusted for differences in the number of working days.

3. Unlike the index of production (see 2.a above), the other indices (turnover, orders, exports, imports, number of employees, gross wages and salaries) are not adjusted to allow for differences in the number of working days in each period before they are seasonally adjusted.

4. INDICES OF TURNOVER AND ORDERS RECEIVED

These reflect changes in turnover (overall sales, including sales for export) and orders received at current prices. For detailed definitions, see also supplement N° 12-1980 to this bulletin.

5. INDICES OF IMPORTS AND EXPORTS BY INDUSTRIAL BRANCHES

These are indices of imports or exports (special trade), at current prices (respectively c.i.f. or f.o.b.), of industrial products classified according to the industrial branches to which they belong. It should be emphasized that this classification implies the need to make certain choices in allocating external trade products to overall groups of products according to a nomenclature of industrial activities, and that even comparability between the indices for imports and those for exports is limited.

The indices for the EEC as a whole refer only to trade with non-Member States.

NOTE

For the time being the indices are based on the external trade of the Community of Nine, excluding Greece, which became a full member of the Community with effect from 01.01.1981.

6. INDICES OF THE NUMBER OF EMPLOYEES AND OF GROSS WAGES AND SALARIES

6.1 The number of employees includes all persons employed by the firm (manual workers and salaried employees on the company's payroll).

6.2 Gross wages and salaries cover all sums paid out to persons employed by the company in remuneration for the work they do, including taxes and social security contributions payable by the employee and deducted by the employer, but excluding social security and other contributions payable by the employer. A methodological note on these two indices is being prepared and will be published as a supplement to a future issue of this bulletin.

7. BUILDING AND CIVIL ENGINEERING (PART III)

For information on the index of production and its layout, and on the index of the number of employees, see sections 2 and 6.1 above.

The indices for authorised dwellings and dwelling starts and completions only give a picture of activity in the residential building sector, whereas the other two types of indices also cover non-residential building and civil engineering.

8. GRAPHS

The graphs cover the trend in production and/or employment, whereby the trend is defined as the moving average over three months (after seasonal adjustment) in the case of the index of production; in the case of employment, for which the indices are quarterly, a monthly series is obtained by linear interpolation (without seasonal adjustment).

9. ADDITIONAL INFORMATION

The information included in this bulletin has been taken from the CRONOS data bank, which may be accessed via the EURONET network. Information on CRONOS-EURONET or on the information given in this bulletin may be obtained from EUROSTAT in Luxembourg, tel. 4301-3208 (Mr. VANDERSEYPEN).
