Monthly Bulletin

23 April 1982

## CONSUMER PRICE INDEX : MARCH 1982

The consumer price index for the European Community in March 1982 was 0.9 % higher than in February. The change on the previous month was 1.1 % in France, 1.0 % in the Netherlands, 0.9 % in Italy, the United Kingdom and Denmark. In Belgium (0.2 %) and Luxembourg (0.1 %) it was low because of measures taken after the devaluation. In the Federal Republic of Germany the increase was 0.2 % and in Greece 3.3 %.

During the past 12 months or so, the increase compared with the same month a year earlier has been relatively stable at between 12 and 13 % for the European Community. This contrasts sharply with a marked slow-down in the rates of increase shown by the similar series for the USA and for Japan.

This monthly bulletin includes at page 6 a chart showing for each member country the development of price indices for the group Clothing and footwear (including repair). The index numbers for individual member countries range more or less as widely for this group as for the general index but the average for the Community is more than 10 % below the general index and this difference between the indices has developed progressively over the last two years. Moreover there are marked differences between member countries. In the United Kingdom, for example, the group index (1975 = 100) is lower than that for the Community while the total index is significantly higher. In France and Denmark the total indexes are close to the Community average but the group index for France is higher than that for the Community and that for Denmark clearly lower.

The graph shows seasonal price fluctuations for the Netherlands, Greece and Denmark. They are probably due to the price collection methods taking into account "sale" prices of products in the beginning of the year and during summer. In the majority of countries sale prices are not taken into account. Price increases for clothing and footwear can be observed for all countries at the end of the winter and at the beginning of autumn but the extent of the increase varies from country to country.

Contents :

- Table A - General index, p. 3
- Table B-K - Indices for sub-groups, P. 4-13
- Table L - General price indices for Switzerland, Austria, Norway and Sweden, p. 14
- Table M - Historical series 1955 - 1981
- Methodological note, P. 16

### Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

### Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc.... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
