25 June 1982

CONSUMER PRICE INDEX : MAY 1982

The increase of the Community consumer price index between April and May 1982 was 0.8 %. The rate of increase varied from country to country; in Luxembourg 1.4 %, Greece 1.3 %, in Italy and Denmark 1.1 %; in Ireland, between February and May 1.9 % monthly average. In the other countries the rise was below 1 %: Belgium (0.9 %), France (0.8 %), United Kingdom (0.7 %), Germany (0.6 %) and the Netherlands only 0.3 %.

The rate of increase over the last twelve months was 11.2 % which again confirms the slow down of the increase in prices since the middle of 1981 (see graph p. 4).

The price index base 1975 = 100 for EUR 10 has now reached 200, which means that the price level has doubled since 1975. However, there are marked differences between countries. Greece at 317 is followed by Italy (289), Ireland (273) and the United Kingdom (239). For France and Denmark, the level is around 200, whereas for Germany (135) and the Benelux countries (150-160) the index has increased less. It is interesting to compare with some other West European and major industrialized countries where, in general, the inflation since 1975 was considerably less.

Switzerland	125	United States	176
Austria	145	Japan	147
Norway	186		
Sweden	198

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc.... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
