

CONSUMER PRICE INDEX

LIBRARY

Monthly Bulletin

22 november 1982

Consumer Price Index : October 1982

Between September and October 1982, consumer prices in the European Community increased on average by 0,9 %. Increases below the general average were recorded in Germany (FR) and the Netherlands (both 0,3 %); France and the United Kingdom (both 0,5 %) and Belgium 0,8 %. Increases in Denmark at 1% and Luxembourg at 1,1% were slightly above the average while the increases in Italy (2,0 %) and Greece (2,4 %) were significantly more.

The increase over 12 months for the Community of Ten is 10,1 %; the lowest such increase since mid-1979.

For the individual EC-Countries the increases were as follows :

Netherlands	4,7 %	Denmark	10,3 %
Germany (FR)	4,9 %	Luxembourg	10,4 %
United Kingdom	6,8 %	Ireland	17,0 %
France	9,4 %	Italy	17,4 %
Belgium	9,8 %	Greece	20,0 %

This monthly bulletin shows on page 10 a chart comparing for each country, the development of the consumer price index for the group "Transport and Communications".

For EUR-10 the index of this group is higher than the general index; this is also the case for France, Italy, Belgium, Luxembourg and Ireland.

For 4 countries, Germany (FR), The Netherlands, the United Kingdom and Denmark there are only small differences between this group and general indexes.

On the contrary, over the last three years the Greek index for "Transport and Communications" has increased progressively more slower than the general index.

With regard to the EUR-10 index for this group, the slowing down in the rate of increase has been broadly in line with that for the general index.

In comparison with the same month a year earlier, which was at 13 % some 18 months ago, is now down to about 10 %.

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
