Monthly Bulletin

24 January 1982

The Consumer Price Index in December 1982

The consumer price index for the European Community rose by 0,4 % from November to December 1982. Decreases over the month in a number of countries, Denmark (0,5 %), Netherlands (0,3 %), the United Kingdom (0,2 %) and Belgium (0,1 %) were more than offset by increases in Germany (0,2 %), Luxembourg (0,3 %), Italy (0,7 %), France (0,9 %) and Greece (1,5 %).

The rate of inflation as measured by the consumer price index for the Community as a whole over the 12 months to end-1982 is 9,4 %, the smallest increase since 1978.

The lowest increases during the year 1982 - i.e. from December 1981 to December 1982 - were reported from the Netherlands (4,2 %), Germany (4,6 %) and the United Kingdom (5,4 %). These increases may be compared with the rather higher increases in Belgium (8,1 %), Denmark (9,0 %), France (9,8 %), Luxembourg (10,4 %) and Ireland (12,3 %). More significant increases were reported in Italy (16,2 %) and Greece (19,1 %).

The corresponding figures for the applicant member-states, Spain and Portugal, are about 12,0 % and 18,9 % respectively.

For other countries with which comparison is often made, the order of increases is : Austria (4,5 %), Switzerland (6 %), Sweden (10 %), Norway (11 %), Canada (10 %), the United States (3,9 %) and Japan (2 %).

The general index table as well as the tables for the 8 subgroups are each accompanied by a graph, showing the evolution of the consumer price indices for the Community (EUR-10) and for the individual member-states.

Methodological Note

1. The consumer price indices presented here are national indices which may appear under different titles in some of the countries. The development of the general index published by EUROSTAT is equivalent to that published by the country.
2. The components of this general index correspond to groupings of the national indices aggregated according to a harmonized classification of the ESA (European System of Integrated Economic Accounts). The price development of these components is equal to the price development of the national indices for the same components of the classification.
3. The scope of the general index differs according to each country. This can be due to population differences (specific income classes, certain socio-occupational categories, or all households); differences in geographic zones (capital, urban areas, rural areas); or differences in the concepts of expenditure on rent, health, etc. Finally, methods of seasonal correction differ from country to country.
4. A fixed base system is used in some countries, while others use a chain system (variable weights). Base years may also differ between countries. For better comparison EUROSTAT has taken 1975 as the base year for all countries.
5. The EUR 9 indices are obtained from the arithmetic average of the national indices weighted by the relative share of each country in real values, as obtained for final household consumption and its components from the comparison in real values of the aggregates of ESA (1975).

Note méthodologique

1. Les indices de prix à la consommation présentés ici sont les indices nationaux. Ces indices portent des noms différents dans les différents pays. L'indice général publié par l'EUROSTAT correspond toujours, en évolution, à l'indice général publié par le pays.
2. Les composantes de cet indice général correspondent à des regroupements des indices nationaux agrégés selon une classification harmonisée conforme au SEC (Système Européen des Comptes nationaux). Les évolutions de prix correspondent pour ces regroupements aux évolutions constatées par les indices nationaux pour le même champ de classification.
3. Le champ couvert par l'indice général est différent selon les pays, aussi bien concernant la population concernée (tranche de revenu spécifique, certaines catégories socio-professionnelles, ou l'ensemble des ménages) que en ce qui concerne les zones géographiques concernées (capitale, zones urbaines, ensemble des pays, etc...) ou encore concernant les concepts de dépense pour les loyers, la santé, etc.... Enfin, les traitements statistiques concernant les corrections des variations saisonnières sont aussi différents selon les pays.
4. Un système de base fixe est utilisé dans certains pays, dans d'autres un système en chaîne est mis en oeuvre (pondérations variables). Les années de référence utilisées au niveau national pour présenter les indices, sont différentes selon les pays. Pour faciliter la comparaison l'EUROSTAT a choisi l'année 1975 comme année commune pour la présentation de ces indices.
5. Les indices EUR 9 sont obtenus comme moyenne arithmétique des indices nationaux pondérés par les parts relatives des différents pays en valeurs réelles, telles qu'elles ont été obtenues pour la consommation finale des ménages et ses composantes, lors de la comparaison en valeurs réelles des agrégats du SEC-1975.
