FOREWORD

The current publication, which is exclusively devoted to the global energy balance sheets, presents, for the years 1986 and 1987, the balance sheets expressed in specific units and in tonnes of oil equivalent, for each of the member States and for the Community as a whole. The balance sheets have been constructed according to the methodology for "Supplied Energy", where all the operations are harmonized on the basis of the energy content of each source and form of energy, without any hypothetical substitutions, nor any calculation of equivalence.

Users wishing to know more about the methodology of the balance sheets may refer to the publication "Principles and Methods of Energy Balance Sheets", which has recently been published. This publication consists of two sections : the first explains the different types of energy balance sheets, the second supplies a description of the format of the energy balance sheet of SOEC, defining each aggregate and each product.

AVANT-PROPOS

La présente publication, consacrée exclusivement aux bilans globaux de l'énergie présente pour les années 1986 et 1987 les bilans exprimés en unités spécifiques et en tonnes d'équivalent pétrole pour chacun des Etats membres et pour la Communauté dans son ensemble. Les bilans ont été élaborés selon la méthodologie dite de l'"Energie finale", où toutes les opérations sont comptabilisées sur la base du contenu énergétique de chaque source et forme d'énergie, sans aucune hypothèse de substitution ni aucun calcul d'équivalence.

Les utilisateurs qui désirent en savoir plus sur la méthodologie des bilans sont priés de se référer à la publication "Principes et méthodes des bilans de l'énergie" qui vient de paraître. Cette publication comporte deux parties : la première explicite les différents types de bilans globaux de l'énergie, la seconde fournit une description de la matrice du bilan de l'énergie de l'OSCE en définissant chaque agrégat et chaque produit.

(*) The tonne of oil equivalent is a conventional standardized unit defined on the basis of a tonne of oil with a net calorific value of 41 860 kilojoules/kg.
The conversion coefficients from the specific units to the kgoe (kilogramme of oil equivalent) are thus computed by dividing the conversion coefficients to the kilojoules by 41 860.

(*) La tonne d'équivalent pétrole est une unité conventionnelle standardisée définie sur la base d'une tonne de pétrole ayant un pouvoir calorifique inférieur de 41 860 kilojoules/kg.
Les coefficients de conversion des unités spécifiques vers le kgep (kilogramme d'équivalent pétrole) sont de ce fait calculés en divisant les coefficients de conversion vers les kilojoules par 41 860.

This computer-produced publication contains the overall energy balance sheets for the Community and each Member State, expressed in specific units and in tonnes of oil equivalent and based on the 'energy supplied' methodology, in which all operations are evaluated by the energy content of each source and form of energy without the need for substitution or equivalence calculations.

The data refer to 1986 and 1987 and are given in aggregated form and by product.

Cette publication, établie par voie informatique, est consacrée aux bilans globaux de l'énergie de la Communauté et chacun des États membres. Les bilans exprimés en unités spécifiques et en tonnes d'équivalent pétrole sont élaborés selon la méthodologie dite de l'« énergie finale », où toutes les opérations sont comptabilisées sur la base du contenu énergétique de chaque source et forme d'énergie, sans aucune hypothèse de substitution ni aucun calcul d'équivalence.

La présentation sous forme de bilans agrégés et de bilans ventilés par produit concerne les années 1986 et 1987.
