## Vorwort

Mit der monatlich erscheinenden Veröffentlichung „Eurostatistik“ sollen die Kenntnisse für den europäischen Wirtschaftsraum über die neuesten statistischen Daten über die Europäische Gemeinschaft seit dem 1.1.1973 (2) über einen breiten Bereich hinweg über den Vereinigten Staaten und Japan bereitgestellt werden.

„Eurostatistik“ enthält nicht die Ergebnisse der von Eurostat im Auftrag der Europäischen Gemeinschaften durchgeführten Erhebungen der Wirtschaftlichen Zusammenarbeit und Entwicklung.

Die Tabellen werden jährlich für die meisten Länder der Gemeinschaft veröffentlicht und die Daten der Jahre vor dem Berichtsjahr sind nicht mehr verfügbar. Die Tabellen sind in der Reihenfolge der Länder geordnet, die in der Reihenfolge der Länder der Europäischen Gemeinschaft sind.

Schließlich sind die Tabellen über die wichtigsten Indikatoren der Wirtschaftlichen Zusammenarbeit und Entwicklung der Europäischen Gemeinschaft über die Jahre 1973 bis 1978 veröffentlicht. Die Tabellen sind in der Reihenfolge der Länder der Europäischen Gemeinschaft geordnet.

„Eurostatistik“ besteht aus zwei Teilen:

- Die Reihe „Eurostatistik“ über die wichtigsten Indikatoren der Wirtschaftlichen Zusammenarbeit und Entwicklung der Europäischen Gemeinschaft über die Jahre 1973 bis 1978.
- In der Reihe „Eurostatistik“ werden die wichtigsten Indikatoren der Wirtschaftlichen Zusammenarbeit und Entwicklung der Europäischen Gemeinschaft über die Jahre 1973 bis 1978 veröffentlicht.
- In der Reihe „Eurostatistik“ werden die Daten der von Eurostat im Auftrag der Europäischen Gemeinschaft durchgeführten Erhebungen der Wirtschaftlichen Zusammenarbeit und Entwicklung der Europäischen Gemeinschaft veröffentlicht.

Die in „Eurostatistik“ veröffentlichten Daten stammen von Eurostat im Auftrag der Europäischen Gemeinschaft, der Europäischen Zentralbank und der Europäischen Kommission.

Der Zugang zu diesen Daten ist kostenlos. Die Daten sind in der Reihenfolge der Länder der Europäischen Gemeinschaft geordnet.

Weitere Informationen über Eurostat sind in der Reihe „Eurostatistik“ zu finden.

Die Redaktion von Eurostatistik bittet Ihre Leser für die fehlerhaften Zahlen in einigen Tabellen der vorangegangenen Ausgabe (1/92) um Entschuldigung. Aufgrund eines technischen Problems wurden alle negativen Ziffern als positive ausgedruckt. Die korrekten Daten liegen in den entsprechenden Tabellen dieser Ausgabe (2/92) vor.

Wir danken Ihnen für Ihr Verständnis.

We apologise to all readers for the incorrect figures printed in the previous edition of Eurostatistics (1/92). This error was due to a technical fault, as minus signs for certain indicators failed to be printed. All figures are correctly printed in the present edition.

Thank you for your comprehension.

La rédaction d'Eurostatistiques s'excuse auprès de ses lecteurs pour les erreurs qui se sont glissées dans le numéro 1/92 de la publication. En effet, en raison d'un problème technique, les signes de certains indicateurs ont été supprimés. Les données exactes de ces indicateurs sont présentées dans les tableaux de la présente édition.

Merci de votre compréhension.

Mit der monatlich erscheinenden Veröffentlichung „Eurostatistik“ – Daten zur Konjunkturanalyse werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR 12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

„Eurostatistik“ enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Die Reihen werden jeweils für die letzten 15 Monate, die letzten fünf Quartale und die letzten vier Jahre veröffentlicht, um eine kurz- oder mittelfristige Analyse – gegebenenfalls mit überarbeiteten Zahlen – zu ermöglichen.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung. Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

„Eurostatistik“ besteht aus drei Teilen:

- Die Rubrik „kurz notiert“ gibt die wichtigsten Ereignisse und Entwicklungen der jüngsten Zeit im wirtschaftlichen, finanziellen und sozialen Bereich wieder.
- Im Schaubilderteil werden die wichtigsten Reihen über die wirtschaftliche Entwicklung in der Gemeinschaft, den Mitgliedstaaten, den Vereinigten Staaten und Japan veranschaulicht.
- Im Konjunkturdatenteil werden die Daten, die von Eurostat auf der Grundlage gemeinsamer Kriterien harmonisiert wurden, für sämtliche Mitgliedstaaten dargestellt und mit den Daten der Vereinigten Staaten und Japans verglichen.

Die in „Eurostatistik“ veröffentlichten Daten stammen aus dem „ICG“-Bereich der On-line-Datenbank „Cronos“ von Eurostat.

Wer Zugang zu Cronos besitzt, kann jederzeit die Tabellen dieser Veröffentlichung abfragen, wobei die Daten täglich auf den neuesten Stand gebracht werden. Hinweise zur „on-line“-Benutzung finden sich auf der letzten Seite.

Weitere Informationen über „Eurostatistik“ können bei folgender Stelle angefordert werden:

Soweit nicht anders angegeben, beziehen sich die Angaben auf den Gebietsstand der Bundesrepublik Deutschland vor dem 3.10.1990; sie schließen Berlin (West) ein.

**WECHSELKURSE: Zinsgefälle zwischen Deutschland und den USA wächst weiter**

Das Gefälle zwischen den deutschen und den amerikanischen Zinssätzen, das bereits seit mehreren Monaten beständig zunimmt, ist in den beiden letzten Dezemberwochen weiter gewachsen. Am 20. Dezember, d. h. einen Tag nach der (im letzten Monat ausführlicher kommentierten) Anhebung der deutschen Leitzätze gab die amerikanische Notenbank die Senkung ihres Diskontsatzes um 1 % auf 3,5 % bekannt. Damit beträgt das Leitzinsgefälle jetzt 4,5 %; vor 12 Monaten hatte der amerikanische Diskontsatz noch um 0,5 % über dem deutschen gelegen, wobei der Abstand zwischen den kurzfristigen Marktsätzen allerdings geringer war.

Im Anschluß an die Anhebung der deutschen Zinssätze wurden die Leitzätze am 20. bzw. 23. Dezember außer im Vereinigten Königreich in allen am Wechselkursmechanismus teilnehmenden Ländern heraufgesetzt: in Irland um 0,5 % auf 10,75 % ('Facility Rate'<sup>2)</sup>, in Frankreich von 9,25 % auf 9,6 % (Interventionsatz) bzw. von 10 % auf 10,5 % (Rückkaufsatz), in Italien um 0,5 % auf 12 % (Diskontsatz) und in Spanien um 0,25 % auf 12,75 % (Ausleihensatz für tägliches Geld) bzw. 12,45 % (Rückkaufsatz für eintägige Pensionsgeschäfte), wobei der zentrale Interventionsatz der Bank von Spanien allerdings unverändert blieb.

Am 30. Dezember überraschte die Bank von Japan die Finanzmärkte mit einer Senkung ihres amtlichen Diskontsatzes um 0,5 % auf 4,5 %. Dieser Schritt unterstreicht die unterschiedliche Zinsentwicklung in Europa auf der einen und in den USA und Japan auf der anderen Seite.

Das Vereinigte Königreich ist eher der letztgenannten Ländergruppe zuzuordnen, da es sich gegenwärtig in einer relativ schweren Rezession befindet, seine Zinssätze jedoch nicht in dem gewünschten Maße senken kann, da ein niedrigeres Zinsniveau Wechselkursauswirkungen zur Folge hätte, die mit den durch den Wechselkursmechanismus vorgegebenen Einschränkungen unvereinbar wären. Daher ist das Vereinigte Königreich bemüht, seine Zinssätze im Gegensatz zu den übrigen am Wechselkursmechanismus teilnehmenden Ländern nicht anzuheben, was zur Folge hat, daß der Kurs des Pfund Sterling seit einigen Wochen in unmittelbarer Nähe des effektiven unteren Interventionskurses gegenüber der D-Mark liegt (dieser Kurs wird von der stärksten Währung innerhalb der Wechselkursmechanismus, der Peseta, vorgegeben). Der Wertverlust des Pfundes hat dabei allerdings auch einen Wertverlust der Peseta nach sich gezogen, wodurch der effektive Interventionskurs gesunken ist.

Die Folge der beschriebenen Zinsänderungen war eine Zunahme der Spannungen innerhalb des Wechselkursmechanismus und eine leichte Aufwertung der D-Mark gegenüber anderen am Wechselkursmechanismus teilnehmenden Währungen und vor allem gegenüber dem US-Dollar. Diese Dollar-Schwäche sollte allerdings nicht überbewertet werden, denn Ende 1991 wurden für 1 Dollar etwas mehr D-Mark gezahlt als am Jahresanfang. In den ersten Wochen des Jahres 1992 tendierte der Dollar uneinheitlich; nachdem er am Jahresende bei 1,52 DM gestanden hatte, verbesserte er sich am 17. Januar auf 1,61 DM, um am 21. Januar wieder auf 1,59 DM zurückzufallen.

Die Peseta war Ende 1991 vor dem belgischen Franc und der D-Mark weiterhin die stärkste Währung innerhalb des Wechselkursmechanismus. Am unteren Ende der Skala lag des Pfund Sterling, gefolgt von der dänischen Krone und dem französischen Franc.

**RENDITEN VON STAATSANLEIHEN: 1991 in allen Ländern niedrigere Renditen**

1991 lagen die Renditen von Staatsanleihen in allen hier erfaßten Ländern unter denen des Jahres 1990. Am ausgeprägtesten war der Renditerückgang dabei in den Ländern mit den zuvor höchsten Renditen: in Spanien (-2,6 % zwischen Ende 1990 und Ende 1991), Italien (-2 % im gleichen Zeitraum) und Portugal (-1,6 % zwischen Oktober 1990 und Oktober 1991). In diesen Ländern liegt das Renditeniveau jetzt näher bei dem der übrigen Mitgliedstaaten der Gemeinschaft. Generell war innerhalb der EG, insbesondere in den am Wechselkursmechanismus teilnehmenden Ländern, in den letzten 12 Monaten eine gewisse Konvergenz der Anleiherenditen zu beobachten.

Im Dezember 1991 waren die Renditen von Staatsanleihen in den meisten Ländern rückläufig. In den Vereinigten Staaten und Japan, wo der Renditerückgang 0,2 % bzw. 0,4 % betrug, war diese Entwicklung erwartet worden, da in beiden Ländern die kurzfristigen Zinssätze in jüngster Zeit ebenfalls rückläufig waren. Da die kurzfristigen Zinssätze stärker zurückgegangen sind als die langfristigen (1991 wurde der amerikanische Diskontsatz um 3 % zurückgenommen, während sich die Anleiherenditen nur um 0,7 % verringerten), weist die Zinsertragskurve für die USA derzeit eine sehr ausgeprägte Steigung auf. Die Steigung der japanischen Zinsertragskurve ist dagegen geringer, denn die Differenz zwischen dem Diskontsatz und der Rendite von Staatsanleihen beträgt rund 1 %.

In acht der zehn EG-Mitgliedstaaten, für die Daten vorliegen, kam es im Dezember ebenfalls zu einem Renditerückgang, der in den meisten Fällen allerdings relativ geringfügig war. Er steht im Gegensatz zu dem Ende Dezember zu beobachtenden Anstieg der kurzfristigen Zinssätze, dessen Auswirkungen auf die Anleiherenditen u. U. allerdings erst in den Daten für Januar 1992 voll sichtbar werden.

In Spanien und Italien erhöhten sich die Anleiherenditen im Dezember jeweils um 0,1 %, in beiden Ländern sind sie jedoch deutlich niedriger als Ende 1990.

**GELDVOLUMEN: geringes Geldmengenwachstum in den USA, Japan und dem Vereinigten Königreich**

In den meisten hier erfaßten Ländern hat sich das Geldmengenwachstum weiter verlangsamt; dies gilt insbesondere für die Länder mit den ausgeprägtesten rezessiven Tendenzen.

Die Vereinigten Staaten, Japan und das Vereinigte Königreich verzeichneten das geringste Geldmengenwachstum seit gerauer Zeit. Die M2-Zuwachsrates betrug im September in den USA 2,3 % (gegenüber 2,7 % im August) und in Japan 2,2 % (gegenüber 1,2 % vor 12 Monaten). Im Vereinigten Königreich wächst die Geldmenge im weiteren Sinne derzeit so langsam wie noch nie seit Beginn der 70er Jahre; allerdings gibt es Anzeichen für eine beschleunigte Ausweitung des enger gefaßten Geldmengenaggregats M0, dessen Zuwachsrates im April 1991 am niedrigsten war und sich seitdem erhöht hat.

Frankreich erlebt ebenfalls seit mehreren Monaten ein äußerst geringes Geldmengenwachstum. Die auf das Jahr umgerechnete M2-Zuwachsrates lag in den letzten 18 Monaten nur einmal über 2 % und war in sechs dieser 18 Monate sogar negativ.

**AMTLICHE WÄHRUNGSRESERVEN: in Spanien im November leichter Anstieg**

Unter den Ländern, für die Daten vorliegen, verzeichnete lediglich Spanien im November einen (allerdings ebenfalls nur geringfügigen) Zufluß von Währungsreserven; im Oktober hatten sich die spanischen Reserven um 0,8 % erhöht, woraus sich für die ersten elf Monate des Jahres 1991 ein Anstieg um fast 35 % ergibt, der damit größer war als in allen anderen Mitgliedstaaten der EG.

Den stärksten Abfluß von Währungsreserven verzeichneten Irland (-7,3 %), Italien (-5,6 %) und Dänemark (-4,2 %), wobei sich die dänischen Reserven in den ersten elf Monaten des Jahres 1991 um mehr als 24 % verringerten.

**VIERTELJÄHRLICHE GESAMTRECHNUNGEN: Drittes Quartal 1991: Erneute Verlangsamung des Wirtschaftswachstums der Gemeinschaft (BIP +0,2 %), weiterhin hohe Inflation**

Nachdem die wirtschaftliche Entwicklung der Gemeinschaft\* insgesamt im zweiten Quartal eine leichte Belebung verzeichnen konnte, war das dritte Quartal 1991 durch eine erneute Verlangsamung der BIP-Wachstumsrate (+0,2 %) gekennzeichnet. Dieser neuerliche Rückgang, der mit dem wichtigsten Wirtschaftsindikator völlig in Einklang steht, hat zur Folge, daß die Wachstumsprognosen für das Jahr 1991 erneut nach unten korrigiert werden müssen. Die Gründe für das Anhalten der Stagnationsphase lassen sich als drei einander wechselseitig beeinflussende Faktoren zusammenfassen: 1. die interne Krise der amerikanischen Volkswirtschaft, 2. die japanische Handelspolitik und 3. schließlich die Probleme der deutschen Volkswirtschaft nach der Vereinigung. Beim gegenwärtigen Stand der Dinge scheint eine Umkehr der Wirtschaftstendenzen von diesem Jahr an im Bereich des Möglichen zu liegen, jedoch ziehen die Konjunkturforscher selbst es vor, sich nicht zum Umfang dieser Wirtschaftsbelebung zu äußern, da diese von zahlreichen Faktoren abhängt, zu deren wichtigsten die von den Mitgliedstaaten eingeschlagene Währungspolitik zählen dürfte.

Zu den Inflationsdaten auf der Basis des BIP-Deflators ist anzumerken, daß uns aufgrund des Rückstandes der Veröffentlichung der wertmäßigen Daten Italiens keine Angaben auf Gemeinschaftsebene vorliegen. Davon abgesehen scheint die ausführliche Analyse der Inflation in den Mitgliedstaaten auf eine Tendenz zum Fortbestehen einer eher hohen Inflation hinzuweisen, was die Entscheidungen der meisten Mitgliedstaaten, die Zinssätze im August und danach erneut im Dezember anzuheben, rechtfertigt.

Hinsichtlich der BIP-Komponenten ist eine Verlangsamung der Investitionstätigkeit (+0,4 %) bei gleichzeitiger leichter Aufwärtsentwicklung des Staatsverbrauchs (+0,5 %) zu beobachten.

Was die Situation in den einzelnen Mitgliedstaaten betrifft, so ist in Frankreich eine recht positive Entwicklung des BIP (+0,7 %), in Italien und vor allem in Deutschland hingegen eine Verlangsamung (+0,1 %) festzustellen. Im Vereinigten Königreich trat nach vier Quartalen der rückläufigen Entwicklung wieder eine leichte Erholung des Wirtschaftswachstums ein (+0,1 %). Bei der Inflation ist eine allgemeine Verlangsamung zu beobachten, dennoch bleibt die Inflationsrate vor allem in Deutschland und im Vereinigten Königreich hoch (+1,2 % bzw. +1,0 %).

Bei den Komponenten des BIP ist in Italien und in Deutschland eine leichte Verlangsamung der Investitionstätigkeit festzustellen (+1,6 % bzw. +1,5 %), während Frankreich nach drei negativen Quartalen einen wenigstens geringen Investitionsanstieg verzeichnen kann (+0,1 %). Im Vereinigten Königreich hingegen dauert der Rückgang (-2,5 %), der vor anderthalb Jahren einsetzte, noch immer an. Die Entwicklung der Binnennachfrage, die stärker ausgeprägt ist als die der Produktion, hat im Laufe dieses Quartals zu einer allgemeinen Verschlechterung der Außenhandelsbilanz geführt.

In den Vereinigten Staaten ist nach drei Quartalen der verlangsamen Entwicklung eine leichte Belebung der Produktion (+0,6 %) bei gleichzeitiger deutlicher Verringerung sowohl der vierteljährlichen als auch der jährlichen Inflationsrate (+0,5 % bzw. +3,5 %) zu beobachten. Die wichtigste Entwicklung bei den BIP-Komponenten war in diesem Quartal eine leichte Erholung der Investitionstätigkeit nach zwei deutlich negativen Quartalen.

In Japan hat sich das Wirtschaftswachstum erneut verlangsamt (+0,4 %). Von den Komponenten der Nachfrage ist der deutliche Einbruch beim Staatsverbrauch (-1,4 %) bei gleichzeitiger Abschwächung des privaten Verbrauchs (+0,8 %) hervorzuheben. Hingegen ist bei den Investitionen nach zwei Quartalen rückläufiger Entwicklung ein schwacher Anstieg zu verzeichnen (+0,1 %).

**PREISE: 1991: jährliche Inflationsrate in der EG 4,8 %**

Da sich die Inflationsrate im Dezember im Vergleich zum Vormonat lediglich um 0,1 % erhöht hat, entspricht die jährliche Inflationsrate für die EG insgesamt der im November verzeichneten Rate von 4,8 %.

Dies ist die niedrigste Inflationsrate seit drei Jahren: 1988 = 4,4 %, 1989 = 5,3 %, 1990 = 5,7 %.

Wie immer im Dezember, waren die Veränderungen in den meisten Mitgliedstaaten gering. Ausnahmen bildeten Griechenland (+1,6 %), Portugal (+0,5 %) und Italien (+0,3 %). In Deutschland, Frankreich, Spanien und dem Vereinigten Königreich war ein Anstieg um 0,1 % zu verzeichnen, während der Index in Luxemburg unverändert blieb.

Ein Rückgang wurde in Belgien (-0,2 %), Dänemark (-0,3 %) und den Niederlanden (-0,1 %) festgestellt.

In acht EG-Mitgliedstaaten liegen die Inflationsraten unter denen des Vorjahres, während sie in Deutschland, den Niederlanden, Dänemark und Irland im Vergleich zu 1990 gestiegen sind.

	Dez.91 Dez.90	Dez.90 Dez.89		Dez.91 Dez.90	Dez.90 Dez.89
Dänemark	2,3 %	1,9 %	Vereinigtes Königreich	4,5 %	9,3 %
Luxemburg	2,6 %	4,4 %	Niederlande	4,9 %	2,7 %
Belgien	2,8 %	3,5 %	Spanien	5,5 %	6,5 %
Frankreich	3,1 %	3,4 %	Italien	6,2 %	6,6 %
Irland*	3,6 %	2,7 %	Portugal	9,6 %	13,7 %
Deutschland**	4,2 %	2,8 %	Griechenland	17,8 %	22,8 %

\* November im Vergleich zum November des Vorjahres  
 \*\* Der Verbraucherpreisindex für die Bundesrepublik Deutschland bezieht sich weiterhin auf den Gebietsstand vor dem 3. Oktober 1990.

1) Die niederländischen, belgischen und dänischen kurzfristigen Zinssätze wurden gleichzeitig mit den deutschen angehoben.  
 2) Zinssatz für Ausleihungen der irischen Zentralbank an die Geschäftsbanken.

\* Im vorliegenden Kommentar wurden die gemeinschaftlichen Entwicklungen auf der Grundlage der vier "großen" Länder berechnet, da die übrigen Länder, die über eine vierteljährliche Gesamtrechnung verfügen, mit der Veröffentlichung ihrer Zahlen im Rückstand sind.

Die entsprechenden Inflationsraten für die USA liegen bei 3,1 % und 6,1 %, die Japans bei 2,5 % bzw. 3,8 %, was in beiden Fällen einer Verlangsamung der Preissteigerung im Vergleich zum Vorjahr bedeutet.

### ARBEITSLOSIGKEIT IN DER GEMEINSCHAFT

Eurostat schätzt die Arbeitslosenquote in der Gemeinschaft im November 1991 auf 9,3 %, sie bleibt damit unverändert zum Vormonat. Dieser Wert ist saisonbereinigt, Einflüsse der unterschiedlichen nationalen Methoden zur Erfassung der Arbeitslosigkeit sind weitgehend ausgeschaltet.

Im Laufe der letzten 12 Monate hat die Arbeitslosigkeit in Europa stark zugenommen, von 8,4 auf 9,3 %. Das ist ein Anstieg von 11 % in einem Jahr, der stärkste seit Berechnung von vergleichbaren Arbeitslosenquoten durch Eurostat im Jahre 1983. In den vier Mitgliedstaaten Belgien, Dänemark, Frankreich und Italien ist nicht nur die Höhe der Arbeitslosenquote (8,4 bis 10,2 %) dem Gemeinschaftsdurchschnitt nahe, sondern auch der Anstiegsrhythmus (7-11 % im Jahr) ähnelt dem der Gemeinschaft insgesamt.

Portugal und die alte Bundesrepublik befinden sich in einer sehr günstigen Lage: die Arbeitslosenquote, weniger als 4,6 %, in beiden Ländern, verringerte sich um mehr als 4 % im Jahr in Deutschland, in Portugal sogar um 11 %.

Trotz einer Steigerung von mehr als 10 % im Jahr bleibt Luxemburg das Land mit der niedrigsten Arbeitslosenquote in der Gemeinschaft überhaupt.

Seit dem ersten Quartal 1991 ist nicht mehr in Spanien, sondern in Irland die höchste Arbeitslosenquote in der Gemeinschaft zu verzeichnen. Während sich in Spanien die Quote bei 16 % einpendelte, stieg sie in Irland in einem Jahr von 15,8 auf 18 %.

Im Vereinigten Königreich stieg die Arbeitslosenquote am schnellsten. Zwischen 1990 und 1991 (November) erhöhte sie sich von 7,4 auf 10,2 %. Das bedeutet einen Anstieg von mehr als 40 % in einem Jahr.

### INDUSTRIELLE PRODUKTION: Europaweite Stagnation der Industrieproduktion

Im Oktober 1991 war für die Industrieproduktion der Europäischen Gemeinschaft (EUR 12) kein Aufschwung zu erkennen, wobei auch für die einzelnen Wirtschaftszweige innerhalb der Industrie kaum Unterschiede feststellbar sind. Der arbeitstäglich bereinigte Produktionsindex wird für Oktober für EUR 12 derzeit auf 121,4 geschätzt (1985=100). Dies entspricht einer Veränderung des Index gegenüber Oktober 1990 von -0,6 %. Nach Saisonbereinigung beträgt der geschätzte Index im Oktober 1991 114,3, im Vormonat war er bei 113,7. Verglichen mit dem kumulierten Wert von Mai, Juni, Juli sank die saisonbereinigte EUR 12 Produktion in den letzten drei Monaten August, September, Oktober um 0,9 %, für das Verarbeitende Gewerbe (ohne Bergbau) betrug die entsprechende Veränderungsrate -1,6 %. Anzeichen eines Aufschwungs sind demnach nicht zu erkennen.

In den USA stagniert die Industrieproduktion bei +0,8 % (Wachstumsrate der letzten drei Monate gegenüber den davorliegenden drei Monaten); in Japan hat dagegen mit -1,1 % der entsprechenden Wachstumsrate eine Rezession eingesetzt.

Betrachtet man die Wachstumsrate der saisonbereinigten Daten der letzten drei Monate gegenüber den davorliegenden drei Monaten, so sind in den einzelnen Mitgliedstaaten der Europäischen Gemeinschaft für den Produktionsindex der gesamten Industrie zwar Unterschiede zu verzeichnen, doch deutete die generelle Tendenz auch hier auf Stagnation hin (in Klammern jeweils nur Verarbeitendes Gewerbe ohne Bergbau):

Irland 3,0 % (2,0 %), Spanien 1,0 % (0,5 %), Frankreich 0,6 % (0,8 %), Vereinigtes Königreich 0,2 % (-1,0 %), Dänemark -0,2 % (-0,2 %), Italien -1,5 % (-1,6 %), Deutschland -1,6 % (-2,7 %), Niederlande -3,1 % (-0,5 %).

Deutlich verschlechtert hat sich die Situation im europäischen Automobilbau. Die Produktion in EUR 12 sinkt zur Zeit mit einer jährlichen Veränderungsrate von -2 % (Frankreich +5 %, Italien -2 %, Deutschland -3 %, Vereinigtes Königreich -11 %).

### ZAHLUNGSBILANZ

GESAMTTENDENZEN: Drittes Quartal 1991 – Leistungsbilanzsaldo der Gemeinschaft weiterhin rückläufig; japanischer Leistungsbilanzüberschuß erneut gewachsen; Leistungsbilanzdefizit der USA geht weiter zurück, jedoch langsamer als im Vorquartal.

Nach den bisher vorliegenden Zahlen für das dritte Quartal 1991 hat sich der Leistungsbilanzsaldo der Gemeinschaft im Vorjahresvergleich weiter vermindert, und zwar erheblich stärker als im zweiten Quartal. In den Monaten Januar bis September zusammengenommen war das Defizit der Leistungstransaktionen etwa 40 Mrd. ECU höher als im entsprechenden Vorjahreszeitraum. Dies ist natürlich im wesentlichen darauf zurückzuführen, daß der deutsche Handelsbilanzüberschuß wiederum stark geschrumpft ist.

Nachdem die Leistungsbilanz der USA in den ersten beiden Quartalen 1991 mit einem Überschuß abgeschlossen hatte, verzeichnete sie im dritten Quartal ein Defizit von 13,3 Mrd. ECU (15,6 Mrd. US-\$). Zwar ist der Negativsaldo damit noch immer niedriger als im gleichen Vorjahresquartal (22,5 Mrd. ECU bzw. 29,1 Mrd. US-\$), doch ist die Verbesserung gegenüber dem Vorjahr erheblich geringer ausgefallen als in den ersten beiden Quartalen 1991. Für die guten Ergebnisse im Zeitraum Januar bis Juni spielte der Eingang hoher Beiträge von den alliierten Partnern der USA im Golfkrieg, der den Überschuß in der Dienstleistungs- und Übertragungsbilanz anschwellen ließ, eine wichtige Rolle. Das Handelsbilanzdefizit der USA ist im dritten Quartal im Vorjahresvergleich um 4,3 Mrd. ECU zurückgegangen.

Der japanische Leistungsbilanzüberschuß ist im dritten Quartal 1991 gegenüber dem gleichen Vorjahreszeitraum um 10,7 Mrd. ECU und damit weniger rasch gewachsen als in den beiden vorangegangenen Quartalen. Die Ausweitung des spanischen Handelsbilanzdefizits im dritten Quartal wurde durch einen höheren Überschuß bei den Dienstleistungen und Übertragungen ausgeglichen. Der Saldo der niederländischen Dienstleistungs- und Übertragungsbilanz und damit auch der Leistungsbilanzüberschuß ist im dritten Quartal niedriger ausgefallen als im entsprechenden Vorjahreszeitraum. Dänemark verzeichnete im dritten Quartal einen um 0,3 Mrd. ECU höheren Leistungsbilanzsaldo als im Vergleichszeitraum 1990.

### AUSSENHANDEL

Im September 1991 lag das Defizit im außergemeinschaftlichen Handel bei 7,4 Mrd. ECU und war damit 1,4 Mrd. ECU größer als im September 1990. Die Einfuhren nahmen in diesem Zeitraum um 11,7 %, die Ausfuhren dagegen um 9,4 % zu. Der Vergleich mit September 1990 hat allerdings nur begrenzte Aussagekraft, da der Handelsverkehr in diesem Monat offensichtlich stark durch die instabile Weltwirtschaftslage infolge der Invasion Kuweits beeinträchtigt wurde. Die Ausfuhren der Gemeinschaft scheinen im September 1990 stärker betroffen gewesen zu sein als die Einfuhren. Aus diesem Grund kann davon ausgegangen werden, daß der Unterschied zwischen den Wachstumsraten von Einfuhren und Ausfuhren für den Zeitraum September 1990 – September 1991 ohne die Auswirkungen der Kuwait-Krise nicht nur 2,3 Punkte, sondern sehr viel mehr betragen würde. Die Kosten der Rohölversorgung der Gemeinschaft sind auf keinen Fall eine Erklärung für die Vergrößerung des Defizits, denn sie waren im September 1991, in ECU je Barrel gerechnet, um fast ein Drittel niedriger als im Vergleichsmonat des Vorjahres. In den ersten neun Monaten verdoppelte sich das Defizit im außergemeinschaftlichen Handel (-61,1 Mrd. ECU) gegenüber dem entsprechenden Vorjahreszeitraum beinahe, was mit einer deutlichen Zunahme der Einfuhren (+8,4 %) bei gleichzeitiger Stagnation der Ausfuhren zusammenhängt.

Das Außenhandelsdefizit der USA belief sich auf 7 Mrd. ECU, verglichen mit 8,2 Mrd. ECU im September 1990. Die Ausfuhren haben sich im Vergleich zum entsprechenden Vorjahresmonat, in ECU gerechnet um annähernd 20 % und in Dollar gerechnet um 11 % erhöht. Die Zunahme der Einfuhren beträgt in ECU gerechnet 11 % und reduziert sich in Dollar auf 2 %.

Mit 6,3 Mrd. ECU gegenüber 3,9 Mrd. ECU im Vergleichsmonat des Vorjahres schlug der japanische Außenhandelsüberschuß im September 1991 alle Rekorde. Der Überschuß in den ersten neun Monaten des Jahres 1991 zusammengenommen beträgt damit 46,9 Mrd. ECU. Die Einfuhren Japans sind in ECU gerechnet um 4,1 % gestiegen, in Dollar jedoch um knapp 5 % und in Yen um 8 % zurückgegangen. Der Anstieg der Ausfuhren um 15,8 % in ECU beträgt in Dollar gerechnet noch 7 % und in Yen 4 %.

Der Handelsüberschuß Deutschlands ist im September 1991, verglichen mit dem entsprechenden Vorjahresmonat, um 2 Mrd. ECU zurückgegangen und beträgt nun 0,7 Mrd. ECU. Nur Deutschland und Dänemark weisen im September 1991 noch einen Überschuß auf. Die Defizite Italiens, Spaniens und der BLWU sind um 0,7 Mrd., 0,5 Mrd. bzw. 0,5 Mrd. angestiegen. Das Vereinigte Königreich und Frankreich konnten ihren Negativsaldo um 0,7 Mrd. verringern. Die größten Defizite wiesen im September 1991 mit jeweils 2 Mrd. ECU Italien, das Vereinigte Königreich und Spanien auf.

*Eurostatistics – data for short-term economic analysis* – is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR 12), each Member State, the United States and Japan.

*Eurostatistics* does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

The series are published for the last 15 months, the last five quarters and the last four years, thus permitting short- or medium-term analysis with figures that may have been revised where necessary.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

*Eurostatistics* comprises three sections:

- The 'In brief' section outlines the main recent events and trends in the economic, financial and social fields.
- The 'Graphs' section illustrates the most significant economic series for the Community, its Member States, the United States and Japan.
- The 'Short-term trends' section presents data harmonized by Eurostat on the basis of common criteria for the Member States as a whole, with comparisons with the USA and Japan.

The data published in *Eurostatistics* are taken from the ICG domain of Eurostat's on-line data bank, Cronos.

By linking up to Cronos it is possible to obtain daily the tables presented in this publication, containing data updated daily. The method of consultation can be found at the end of this publication.

Further information about *Eurostatistics* can be obtained from the following address:

Unless otherwise stated, data for the Federal Republic of Germany, including West Berlin, as constituted prior to 3 October 1990.

**EXCHANGE RATES: Differential between German and US interest rates widens further**

The differential between German and US interest rates, which has been widening for several months, increased further in the last two weeks of December. A day after the increase in German interest rates on December 19th (commentated on last month), the Federal Reserve announced a full 1% cut in its discount rate, which now stands at 3.5%. This means that the differential in official rates is now 4.5%; 12 months ago the US discount rate was 0.5% higher than that of Germany, although short-term market rates were closer together. The increase in German interest rates<sup>1</sup> was followed on December 20 and 23 by increases in those of all other ERM countries apart from the UK; in Ireland the central bank facility rate<sup>2</sup> was increased by 0.5% to 10.75%, in France the intervention rate was increased from 9.25 to 9.6% and the repurchase rate from 10 to 10.5%, in Italy the discount rate by 0.5% to 12%, and in Spain the daily assistance rate and overnight re-purchase rate by 0.25% to stand at 12.75 and 12.45% respectively, although there was no change in the Banco de España's key intervention rate. There was a further change in interest rates when on December 30 the Bank of Japan surprised the financial markets with a 0.5% cut in its official discount rate, which now stands at 4.5%. This move further accentuates the differing paths of interest rates between Europe on the one hand and the US and Japan on the other. The UK fits rather more into the second category, since it is currently experiencing a fairly severe recession, but because of the constraints of the Exchange Rate Mechanism (ERM) it is unable to cut interest rates by as much as it would like because of the exchange rate effects that lower interest rates would have. In fact, the UK is attempting not to follow the other ERM members in increasing rates, which has meant that for some weeks sterling has been trading very close to its effective Deutschemark floor (which is determined by the strongest ERM currency, the peseta). However, when sterling has depreciated during this time, it has tended to bring the peseta down with it, thus reducing this effective floor. These changes in interest rates had the effect of increasing tensions within the ERM, with the Deutschemark appreciating slightly against other ERM currencies and particularly against the dollar. The dollar weakness should not be overstated however, since it ended 1991 slightly higher against the DM than it started. In the first weeks of 1992 its behaviour was mixed; ended the year at DM 1.52, it appreciated to reach DM 1.61 by January 17, only to fall back again to DM 1.59 on 21 January. At the end of 1991 the peseta remained the strongest ERM currency, followed by the Belgian franc and the Deutschemark. Sterling ended the year as the weakest currency, below the Danish krona and French franc.

**GOVERNMENT BOND YIELDS: Yields lower in 1991 in all countries**

1991 saw lower government bond yields than 1990 in all countries surveyed. The largest falls in yields occurred in the countries where bond yields were the highest; Spain (down 2.6% between the end of 1990 and the end of 1991), Italy (down 2% over the same period) and Portugal (down 1.6% between October 1990 and October 1991). These economies are now experiencing bond yields that are closer to those of the other EC economies; in fact, there has been some degree of convergence in EC bond yields over the last 12 months, in particular between those countries whose currencies are members of the exchange rate mechanism. In December 1991 there was a generalised fall in government bond yields, with yields falling in most countries. In the case of the United States and Japan, where yields fell by 0.2% and 0.4% respectively, these falls were expected, since short-term interest rates in both countries have recently been falling. The US currently has a very steeply sloped yield curve, since short-term rates have fallen more than long-term ones; in 1991 the US discount rate fell by 3% whilst bond yields fell by only 0.7%. The Japanese yield curve is less steeply sloped: the differential between the discount rate and the yield on government bond yields is around 1%. Eight of the ten EC countries for which data are available also experienced falling bond yields in December, although in most cases these falls were fairly small. This is in contrast to the increases in short-term interest rates which occurred in late December; it is possible that the full impact of these increases on bond yields will be apparent only in January's data, since the increases in short-term rates occurred only at the end of December. Yields in Spain and Italy rose in December, each by 0.1%. Yields in both countries remain significantly below their levels at the end of 1990 however.

**MONEY SUPPLY: Monetary growth slow in the US, Japan and UK**

The general picture of monetary growth in the countries surveyed continues to be one of slow-down in most cases, particularly in those economies which are experiencing the greatest recessionary forces. In the United States, Japan and the United Kingdom, monetary growth is slower than it has been for some time. M2 growth in the US was 2.3% in September, down from 2.7% in August, and in Japan it was 2.2% in September, down from 12% 12 months earlier. In the UK the growth rate of broad money is currently slower than it has been at any time since the early 1970s, although there are signs of an increase in the growth rate of the narrow aggregate, M0, which appears to have reached its' low point in April 1991 and has been increasing since then. France too has been experiencing extremely slow monetary growth for many months; only once in the last 18 months has the annualised growth rate of M2 been above 2%, and in 6 of these months it has actually been negative.

**FOREIGN OFFICIAL RESERVES: small inflow into Spain in November**

Of the countries for which data are available, only Spain experienced an inflow of reserves in November, and even this was small. Spain's reserves increased by 0.8% in October; their increase in the first 11 months of 1991 was almost 35%, remaining the largest of any EC state. The largest outflows were from Ireland (-7.3%), Italy (-5.6%) and Denmark (-4.2%); the latter's reserves fell by over 24% in the first 11 months of 1991.

**QUARTERLY ACCOUNTS: third quarter of 1991: renewed slowdown in European Community economy (GDP: +0.2%), high inflation continues.**

Following the slight upturn in the second quarter of 1991, the third quarter saw a renewed slowdown in the growth of output for the European Community economy(\*) as a whole (GDP: +0.2%). This renewed downturn is entirely consistent with the main economic indicator and will lead to a further downward revision of economic growth forecasts for 1991. The persistent stagnation can be explained by three interacting factors: the crisis in the American economy, Japanese trade policy and the problems which unification is causing for the German economy. As things stand, 1992 may see a reversal of the trend, but even expert economic opinion is reticent on the extent of the upturn on the grounds that many factors are involved, in particular – it seems – the monetary policy adopted by the Member States. As regards inflation measured by the implicit deflator of GDP, data at Community level are not available owing to the delay in publishing the Italian data in value terms. However, a detailed analysis of inflation in the Member States indicates that inflation will tend to remain at a rather high level, which justifies the decisions taken by most Member States to raise interest rates in August and again in December. Looking at the components of GDP, it can be seen that the slowdown in investment (+0.4%) was accompanied by a slight upturn in public consumption (+0.5%). As regards the situation in the Member States, GDP showed a fairly positive trend in France (+0.7%) but slowed down in Italy and especially in Germany (+0.1%). In the United Kingdom, where output had been falling for four quarters, there was a slight upturn (+0.1%). As for inflation, despite a general slowing, it still remained high, particularly in Germany and the United Kingdom (+1.2% and +1.0% respectively). Among the components of GDP, investment slowed down slightly in Italy and Germany (+1.6% and +1.5% respectively), while in France, after three successive quarters of decline, there was positive, albeit slight, growth (+0.1%). In the United Kingdom, however, the period of recession (-2.5%) which began a year and a half ago continued. With domestic demand outstripping production, this quarter saw a general deterioration in the trade balance. In the United States, after three quarters of decline, there was a slight upturn in output (+0.6%) and a sharp reduction in both quarterly and annual inflation (0.5% and 3.5% respectively). Among the components of GDP, the most noticeable change in this quarter was the slight upturn in investment after two quarters of clear falls. The Japan economy saw renewed slowdown (+0.4%). Among the components of demand, there was a very sharp decline in public consumption (-1.4%) together with a slowdown in private consumption (+0.8%). After two quarters of decline, however, investment picked up slightly (+0.1%).

**PRICES: Annual inflation for the EC in 1991 at 4.8%**

Thanks to a monthly increase of only 0.1% in December the annual inflation rate for the EC as a whole remained unchanged from November at a level of 4.8%. This is the lowest figure for 3 years: 1988 = 4.4%, 1989 = 5.3%, 1990 = 5.7%. As usual in December variations were low in most of the EC Member States. Exceptions were Greece (+1.6%), Portugal (+0.5%) and Italy (+0.3%). Germany, France, Spain and the United Kingdom all recorded increases of 0.1%, while the index for Luxembourg remained unchanged. Decreases were registered in the indices of Belgium (-0.2%), Denmark (-0.3%) and the Netherlands (-0.1%). Inflation rates were lower in 1991 than the year before in 8 EC Member States, whereas they were higher than 1990 in Germany, the Netherlands, Denmark and Ireland. In order of increasing current inflation the latest figures are as follows:

	Dec. 91 Dec. 90	Dec. 90 Dec. 89		Dec. 91 Dec. 90	Dec. 90 Dec. 89
Denmark	2.3%	1.9%	United Kingdom	4.5%	9.3%
Luxembourg	2.6%	4.4%	Netherlands	4.9%	2.7%
Belgium	2.8%	3.5%	Spain	5.5%	6.5%
France	3.1%	3.4%	Italy	6.2%	6.6%
Ireland*	3.6%	2.7%	Portugal	9.6%	13.7%
Germany**	4.2%	2.8%	Greece	17.8%	22.8%

The corresponding rates for the USA are 3.1% and 6.1% and those for Japan 2.5% and 3.8%, both showing also a decline compared with last year's figures.

\* November compared with November  
 \*\* The CPI for the Federal Republic of Germany continues to reflect the geographic borders prior to 3 October 1990.

**UNEMPLOYMENT IN THE COMMUNITY**

The seasonally-adjusted unemployment rate in the European Community is estimated by Eurostat at 9.3% for the month of November 1991. This represents the same level as the previous month. The rate is estimated after correction of the differences between national methods of recording unemployment. Over the last 12 months, unemployment in Europe has increased at an accelerating rate: the rate of unemployment rose from 8.4 to 9.3%. This represents an increase of 11% in one year the largest increase since comparable unemployment rates were introduced by Eurostat (1983). Four Member States: Belgium, Denmark, France and Italy have both a rate of unemployment close to the Community average (from 8.4 to 10.2%) and a rate of increase similar to that of the Community as a whole. Portugal and the western part of the Federal Republic of Germany find themselves in a favourable position: the unemployment rate, less than 4.6%, has fallen by more than 4% a year (11% in Portugal). Despite an increase of more than 10% in one year, Luxembourg remains the country with the lowest unemployment rate in the Community.

<sup>1</sup> Short-term rates in the Netherlands, Belgium and Denmark were increased at the same time as those of Germany.  
<sup>2</sup> The rate at which the Central Bank of Ireland lends to commercial banks.

(\*) In this commentary, Community trends are calculated on the basis of the four 'major' countries, given slower publication of the figures for the other countries with a quarterly accounting system.

Since the first quarter of 1991, Ireland has replaced Spain as the country with the highest rate of unemployment in the Community: in Spain the rate has stabilised around 16%, while in Ireland it has increased from 15.8 to 18%.

It is in the United Kingdom, where the increase is largest: between 1990 and 1991 (November), the rate of unemployment has increased from 7.4 to 10.2% representing a rise of more than 40% in 12 months.

### INDUSTRIAL PRODUCTION: EC industrial production stagnant

October 1991 saw no upturn in industrial production in the European Community (EUR 12), and there was little difference in the trends recorded by the individual branches of industry. The EUR 12 production index, adjusted for the number of working days, is currently estimated at 121.4 (1985=100) for October, representing a fall of 0.6% compared with October 1990. After seasonal adjustment, the estimated index for October 1991 is 114.3, as against 113.7 in September. The seasonally-adjusted EUR 12 production index for August, September and October fell by 0.9% from the cumulative figure for May, June and July, and the corresponding fall for manufacturing industry (excluding mining) was -1.6%. There is therefore no sign of a recovery.

In the USA growth in industrial production has remained stable at 0.8% (quarter-on-quarter growth rate), while the Japanese growth rate of -1.1% shows signs of a recession.

When each Member State's seasonally-adjusted production index of all industry for the last three months is compared with that for the preceding three months, different rates of change do emerge at national level, but here too the general trend is towards stagnation. The rates of change are as follows, with the figures in brackets referring to manufacturing industry excluding mining:

Ireland 3.0% (2.0%), Spain 1.0% (0.5%), France 0.6% (0.8%), United Kingdom 0.2% (-1.0%), Denmark -0.2% (-0.2%), Italy -1.5% (-1.6%), Germany -1.6% (-2.7%), Netherlands -3.1% (-0.5%).

The situation in the European automobile industry has deteriorated sharply. The production of EUR 12 decreases at present with a rate of -2.0% (France +5%, Italy -2%, Germany -3%, United Kingdom -11%).

### BALANCE OF PAYMENTS

**GLOBAL TRENDS: Third quarter 1991 – Community's current account balance still falling; Japanese current surplus still growing; US current deficit contracts, but less than it did in previous three months.**

Figures available so far for the third quarter of 1991 indicate a continuation of the year-on-year fall of the Community's current account balance. The third-quarter drop was considerably larger than that in the second, and left the cumulative current deficit for January-September about 40 billion ecus higher than the same period in 1990. The principal underlying development has of course been the continued sharp decline of the German trade surplus.

After registering a surplus in the first two quarters of 1991, the US current account balance showed a deficit of 13.3 billion ecus (\$15.6 billion) in the third quarter. This is still less than

the 22.5 billion ecus (\$29.1 billion) deficit recorded in the same quarter of 1990, but the year-on-year improvement is substantially lower than that for the first two quarters of 1991. A major factor behind the good January-June results was the receipt of large cash contributions from the USA's Gulf coalition partners which helped to swell the invisibles surplus. The US trade deficit contracted by 4.3 billion ecus in the third quarter in year-on-year terms.

Japan's current account surplus rose by 10.7 billion ecus in the third quarter of 1991, a smaller improvement than the preceding two quarters. Meanwhile a third-quarter rise in Spain's trade deficit was offset by a larger invisibles surplus. Netherlands' invisibles balance for the same quarter was down on 1990, reducing its current surplus in year-on-year terms. The third-quarter current balance for Denmark was up 0.3 billion ecus on the same three months in 1990.

### EXTERNAL TRADE

The Community's external trade deficit in September was ECU 7 400 million, an increase of ECU 1 400 million over September 1990. Imports rose by 11.7% between these two dates, while exports increased by 9.4%. However, caution is needed when comparing with September 1990, since trade in that month appears to have been badly hit by the worldwide economic instability which followed the invasion of Kuwait. Community exports seem to have been affected more than imports in September 1990, so that the difference between the rate of increase of imports and that of exports between September 1990 and 1991 – which is a mere 2.3 points – should in fact be seen as far greater. The increase in the deficit certainly cannot be attributed to the cost of the Community's crude oil supplies, since in ecu terms this was almost one-third lower per barrel in September 1991 than in 1990. The first nine months of 1991 saw the Community's external trade deficit virtually double (ECU 61 100 million) in comparison with 1990, this being due to a marked rise in imports (+8.4%) while exports stagnated.

The United States' external trade deficit was ECU 7 000 million compared with ECU 8 200 million in September 1990. Exports rose by almost 20% in ecu terms (+11% in dollar terms) compared with September 1990. The 11% increase in imports in ecu terms worked out at 2% in dollar terms.

Japan recorded a record surplus of ECU 6 300 million in September 1991 compared with ECU 3 900 million in September 1990, bringing the cumulative surplus over the first nine months of 1991 to ECU 46 900 million. Japan's imports rose by 4.1% in ecu terms but fell almost 5% in dollar terms and 8% in terms of the yen. The 15.8% rise in exports in ecu terms amounted to +7% in dollar terms and +4% in terms of the yen.

In September 1991 Germany's trade surplus had fallen by almost ECU 2 000 million compared with September 1990, but Germany remained in surplus to the tune of 700 million. Germany and Denmark were the two countries in surplus in September 1991. The deficits of Italy, Spain and the BLEU worsened by 700 million, 500 million and 500 million respectively. The United Kingdom and France reduced their deficits by 700 million. The highest deficits in September 1991 – each of approximately ECU 2 000 million – were those of Italy, the United Kingdom and Spain.

«Eurostatistiques – Données pour l'analyse de la conjoncture» est une publication mensuelle qui a comme but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR 12), pour les pays membres ainsi que pour leurs principaux partenaires extracommunautaires (États-Unis d'Amérique et Japon).

«Eurostatistiques» ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les importantes parmi celles-ci.

Afin de permettre des analyses diverses et, si nécessaire, à plus long terme, sont publiées généralement des données annuelles sur une période de quatre ans, des données trimestrielles pour les cinq derniers trimestres et des données mensuelles pour les quinze derniers mois disponibles.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, disponibles d'ailleurs dans les publications spécialisées d'Eurostat.

«Eurostatistiques» contient trois types d'informations, actualisés mensuellement:

- la rubrique «en bref» commente les principaux événements et tendances résultant des évaluations récentes;
- la partie «Graphiques» illustre les séries économiques les plus importantes pour la Communauté, les États membres, les États-Unis et le Japon;
- la partie «Données conjoncturelles» présente des données harmonisées par Eurostat sur la base des critères communs, pour l'ensemble des États membres et avec des comparaisons avec les États-Unis et le Japon;

Les données publiées dans «Eurostatistiques» proviennent du domaine «ICG» de la base de données Cronos.

En se connectant à Cronos, il est possible de suivre la mise à jour des tableaux de cette publication journalièrement en consultant les données en temps réel. Le mode de consultation «on line» se trouve à la fin de cette publication.

De plus amples informations concernant «Eurostatistiques» peuvent être obtenues à l'adresse suivante:

Sauf indications contraires, les données portent sur le territoire de la République fédérale d'Allemagne avant le 3.10.1990, Berlin-Ouest inclus.

**TAUX DE CHANGE: L'écart entre les taux d'intérêt allemands et US se creuse encore**

L'écart entre les taux d'intérêt allemands et US, qui s'agrandissait déjà depuis plusieurs mois, s'est encore creusé pendant les deux dernières semaines de décembre. Le lendemain de la hausse des taux d'intérêt allemands le 19 décembre (commentée le mois dernier), la Réserve fédérale a annoncé une réduction d'un point de son taux d'escompte, qui se situe désormais à 3,5 %. Cet écart entre les taux officiels est donc désormais de 4,5 %; il y a un an, le taux d'escompte US était supérieur de 0,5 % au taux allemand (les taux du marché à court terme, cependant, étaient plus rapprochés).

La hausse des taux d'intérêt allemands (1) a été suivie les 20 et 23 décembre par la hausse des taux des autres pays participant au MTC, à l'exception du Royaume-Uni; en Irlande, la banque centrale a accru son taux «facility rate»(2) de 0,5 % à 10,75 %; en France, le taux d'intervention a été augmenté de 9,25 % à 9,6 % et le taux de rémère de 10 à 10,5 %; en Italie, le taux d'escompte a été augmenté de 0,5 % à 12 %, et en Espagne, le taux «assistance rate» et le taux de rémère au jour le jour ont été augmentés de 0,25 % à 12,75 % et 12,45 % respectivement, bien que le taux d'intervention de la banque d'Espagne, qui est le plus important, n'ait pas varié.

Une autre modification des taux d'intérêt s'est produite le 30 décembre, lorsque la banque du Japon a surpris les marchés financiers en abaissant son taux d'escompte officiel de 0,5 % à 4,5 %. Cette réduction a encore accentué la divergence des taux d'intérêt entre l'Europe d'une part, le Japon et les Etats-Unis de l'autre.

Le Royaume-Uni entrerait plutôt dans la deuxième catégorie, puisqu'il connaît actuellement une assez grave récession, mais en raison des contraintes du mécanisme des taux de change (MTC), il n'est pas en mesure de diminuer ses taux d'intérêt autant qu'il le souhaiterait en raison des répercussions qu'aurait une baisse des taux d'intérêt sur les taux de change. Le Royaume-Uni s'efforce en fait de ne pas suivre la hausse des taux d'intérêt dans les autres Etats participant au MTC, ce qui a fait descendre depuis quelques semaines la livre sterling à son plancher effectif vis-à-vis du mark (celui-ci étant déterminé par la monnaie la plus forte du MTC, la peseta). Cependant, la dépréciation de la livre sterling a eu un effet d'entraînement sur la peseta, ce qui a abaissé ce plancher effectif.

Ces variations des taux d'intérêt ont eu pour effet d'accroître les tensions au sein du MTC, le mark s'appréciant légèrement par rapport aux autres monnaies du MTC et au dollar. Il ne faudrait pas surestimer la faiblesse du dollar, cependant, puisque son cours vis-à-vis du mark était légèrement plus élevé à la fin qu'au début de 1991. Pendant les premières semaines de 1992, sa tenue a été irrégulière; après avoir achevé l'année à 1,52 DM, il s'est apprécié jusqu'à 1,61 DM le 17 janvier, pour retomber ensuite à 1,59 DM le 21 janvier. A la fin de 1991, la peseta demeure la monnaie forte du MTC, suivie par le franc belge et le mark. La livre sterling a achevé l'année en tant que monnaie la plus faible, précédée par la couronne danoise et le franc français.

**RENDEMENT DES OBLIGATIONS D'ETAT: Baisse des rendements en 1991**

On observe en 1991 une baisse des rendements des obligations d'Etat dans l'ensemble des pays enquêtés. La baisse la plus forte s'est produite dans les pays où ces rendements étaient les plus élevés: entre la fin de 1990 et la fin de 1991, -2,6 % en Espagne, -2 % en Italie et -1,6 % au Portugal. Le rendement des obligations dans ces pays se rapprochait de celui des autres Etats membres de la CE; on constate en effet une certaine convergence entre le rendement des obligations au sein de la CE sur les douze derniers mois, et plus particulièrement entre les pays qui participent au mécanisme des taux de change.

Le rendement des obligations d'Etat a connu une baisse généralisée en décembre 1991. Dans le cas des Etats-Unis et du Japon, cette baisse, de 0,2 % et 0,4 % respectivement, était attendue, puisque les taux d'intérêt à court terme ont récemment diminué dans ces deux pays. Les Etats-Unis ont actuellement une courbe de rendement très pentue, puisque les taux d'intérêt à court terme ont plus baissé que les taux d'intérêt à long terme; en 1991, le taux de l'escompte US a baissé de 3 %, mais le rendement des obligations de 0,7 % seulement. La courbe de rendement japonaise est moins pentue; l'écart entre le taux de l'escompte et le rendement des obligations d'Etat est d'environ 1 %.

Huit des dix Etats membres de la CE pour lesquels des données sont disponibles ont également connu une baisse des rendements des obligations en décembre, bien que très faible dans la plupart des cas. Cette baisse est en contradiction avec l'augmentation des taux d'intérêt à court terme qui s'est produite fin décembre; il est possible que le plein effet de ces augmentations sur les rendements des obligations n'affecte que les données de janvier, puisque les augmentations susmentionnées n'ont eu lieu que fin décembre. Les rendements en Espagne et en Italie ont augmenté de 0,1 % en décembre. Cependant, ils demeurent nettement en-dessous de leurs niveaux de fin 1990 dans ces deux pays.

**MASSE MONETAIRE: Diminution de la croissance aux Etats-Unis, au Japon et au Royaume-Uni**

Le ralentissement se poursuit en général dans les pays enquêtés, et plus particulièrement dans les pays dont l'économie a le plus souffert de la récession.

Aux Etats-Unis, au Japon et au Royaume-Uni, la croissance monétaire est plus lente qu'elle ne l'a été depuis longtemps. Le taux de croissance de M2 en septembre a atteint aux Etats-Unis 2,3 %, contre 2,7 % en août et au Japon 2,2 %, soit une diminution de 12 % sur douze mois. Au Royaume-Uni, le taux de croissance de l'agrégat monétaire M4 est plus faible qu'il n'a jamais été depuis le début des années 70, bien qu'on observe des signes de croissance de l'agrégat M0, qui semble avoir atteint son minimum en avril 1991 et augmente depuis.

La France connaît également une croissance monétaire très faible depuis longtemps; sur les dix-huit derniers mois, le taux de croissance de M2 n'a été supérieur qu'une seule fois à 2 %, et il a même été six fois négatifs.

**RESERVE DE CHANGE: Faibles rentrées en Espagne en novembre**

L'Espagne est le seul pays parmi ceux pour lesquels des données sont disponibles qui a connu des rentrées en novembre et, même dans ce pays, elles ont été faibles. Les réserves

de l'Espagne ont augmenté de 0,8 % en octobre; leur croissance sur les 11 derniers mois de l'année 1991 a atteint presque 35 %, et demeure la plus importante de la CE. La diminution des réserves a été la plus forte en Irlande (-7,3 %), en Italie (-5,6 %) et au Danemark (-4,2 %); les réserves de ce dernier pays ont diminué de plus de 24 % sur les 11 premiers mois de 1991.

**COMPTES TRIMESTRIELS: Au cours du troisième trimestre 1991: nouveau ralentissement de l'économie communautaire ( PIB +0,2 % ), inflation toujours élevée.**

Après la légère reprise enregistrée au cours du deuxième trimestre, le troisième trimestre 1991 a été caractérisé, pour l'économie communautaire\* dans son ensemble, par un nouveau fléchissement du rythme de croissance de la production (PIB +0,2 %). Ce nouveau fléchissement, tout à fait cohérent avec le plus important indicateur économique, conduit à une nouvelle révision à la baisse des prévisions relatives à la croissance économique au cours de l'année 1991. Les raisons de la persistance de la phase de stagnation peuvent être synthétisées par trois éléments qui interagissent entre eux: tout d'abord la crise interne de l'économie américaine; en deuxième lieu la politique commerciale japonaise, enfin, le problème qui caractérise l'économie allemande après l'unification. En l'état actuel des choses une inversion des tendances de l'économie semble être possible à partir de cette année, mais les conjoncturistes mêmes préfèrent ne pas se prononcer à propos de la portée de cette reprise en liant ceci à beaucoup de facteurs dont un des plus importants semble être la politique monétaire adoptée par les Etats membres.

En ce qui concerne l'inflation mesurée par le déflateur implicite du PIB, nous ne disposons pas de données au niveau communautaire à cause du retard de la publication des données italiennes en valeur. D'autre part, une analyse détaillée de l'inflation dans les Etats membres semble indiquer une tendance au maintien d'une inflation plutôt élevée, ce qui justifie bien les décisions prises par la plupart des Etats membres d'augmenter les taux d'intérêt au cours du mois d'août et à nouveau au cours du mois de décembre.

En ce qui concerne les composantes du PIB, on observe le ralentissement des investissements (+0,4 %) accompagné par une légère reprise de la consommation publique (+0,5 %).

En ce qui concerne la situation dans les Etats membres, on constate une évolution du PIB assez positive en France, (+0,7 %), tandis qu'en Italie et surtout en R.F. d'Allemagne on observe un ralentissement (+0,1 %). Au Royaume-Uni, après quatre trimestres de fléchissement, la production marque une faible reprise (+0,1 %). Du côté de l'inflation, on remarque un ralentissement généralisé, mais celle-ci reste toujours élevée surtout en R.F. d'Allemagne et au Royaume-Uni (+1,2 % et +1,0 % respectivement). Parmi les composantes du PIB, on constate un léger ralentissement des investissements en Italie et en R.F. d'Allemagne (+1,6 % et +1,5 % respectivement), tandis qu'en France, après trois trimestres négatifs on constate une reprise même si celle-ci reste faible (+0,1 %). Par contre, au Royaume-Uni la phase de récession (-2,5 %), commencée il y a un an et demi, continue. L'évolution de la demande interne qui est plus prononcée que celle de la production a déterminé une détérioration généralisée du solde extérieur au cours de ce trimestre.

Aux Etats-Unis, après trois trimestres de fléchissement, on constate une légère reprise de la production (+0,6 %) accompagnée par une sensible réduction de l'inflation tant trimestrielle qu'annuelle (+0,5 % et +3,5 % respectivement). Parmi les composantes du PIB, le fait marquant de ce trimestre est une légère reprise des investissements qui intervient après deux trimestres de nette baisse.

Pour le Japon on observe un nouveau ralentissement de l'économie (+0,4 %). Parmi les composantes de la demande, il faut souligner le très net fléchissement de la consommation publique (-1,4 %), accompagné par un ralentissement de la consommation privée (+0,8 %). Par contre, les investissements, après deux trimestres de fléchissement, présentent une faible reprise (+0,1 %).

**PRIX: L'inflation annuelle de la CE en 1991 est de 4,8 %**

Grâce à une hausse de 0,1 % seulement en décembre, le taux d'inflation annuelle pour l'ensemble de la CE est resté inchangé par rapport à novembre au niveau de 4,8 %. Cela correspond au taux le plus bas depuis 3 ans: 1988 = 4,4 %, 1989 = 5,3 %, 1990 = 5,7 %.

Comme toujours en décembre les variations ont été faibles pour la plupart des Etats Membres.

On constate des exceptions pour la Grèce (+1,6 %), le Portugal (+0,5 %) et l'Italie (+0,3 %).

L'Allemagne, la France, l'Espagne et le Royaume-Uni ont enregistré tous des hausses de 0,1 %, tandis que l'indice du Luxembourg est resté inchangé.

Des baisses furent notées en Belgique (-0,2 %), au Danemark (-0,3 %) et au Pays-Bas (-0,1 %).

Les taux d'inflation sont plus bas que l'année précédente dans huit Etats Membres de la CE, tandis qu'ils sont plus élevés qu'en 1990 en Allemagne, au Pays-Bas, au Danemark et en Irlande.

	Déc. 91 Déc. 90	Déc. 90 Déc. 89		Déc. 91 Déc. 90	Déc. 90 Déc. 89

Allemagne**	4,2 %	2,8 %	Grèce	17,8 %	22,8 %

\* Novembre par rapport à novembre

\*\* L'IPC pour la R.F. d'Allemagne continue à refléter la situation territoriale avant le 3 octobre 1990.

(1) Les taux d'intérêt à court terme ont été augmentés en même temps que les taux allemands aux Pays-Bas, en Belgique et au Danemark.

(2) Taux auquel la banque centrale irlandaise prête aux banques commerciales.

\* Dans ce commentaire et dans les tableaux qui y sont relatifs, les évolutions communautaires sont calculées sur la base des quatre «grands» pays, compte tenu du retard avec lequel les chiffres sont publiés pour les autres pays qui disposent d'une comptabilité trimestrielle.

Les taux correspondants pour les USA sont 3,1 % et 6,1 %, ceux pour le Japon 2,5 % et 3,8 %; ce qui correspond pour ces deux pays à une décélération par rapport aux chiffres de l'année précédente.

FR

## LE CHOMAGE DANS LA COMMUNAUTE

Eurostat estime le taux de chômage dans la Communauté européenne à 9,3 % au mois de novembre 1991, au même niveau que le mois précédent. Ce taux est estimé après correction des variations saisonnières et des différences dans les méthodes nationales de recensement du chômage.

Au cours des douze derniers mois, le chômage en Europe a crû à un rythme accéléré : le taux de chômage est passé de 8,4 à 9,3 %, ce qui correspond à une augmentation de 11 % en un an, l'augmentation la plus rapide depuis que des taux de chômage comparables entre pays sont élaborés par Eurostat (1983).

Quatre Etats Membres, la Belgique, le Danemark, la France et l'Italie, ont à la fois un taux de chômage proche de la moyenne de la Communauté (de 8,4 à 10,2 %) et un rythme de croissance semblable à celui de l'ensemble (de 7 à 11 % par an).

Le Portugal et la partie occidentale de la République fédérale d'Allemagne se trouvent dans une situation très favorable: le taux de chômage, inférieur à 4,6 %, y baisse de plus de 4 % par an (11 % au Portugal).

Malgré une augmentation de plus de 10 % en un an, le Luxembourg garde le taux de chômage le plus faible de la Communauté. Depuis le premier trimestre 1991, ce n'est plus l'Espagne mais l'Irlande qui connaît le taux de chômage le plus élevé de l'Europe communautaire: en Espagne, le taux s'est stabilisé autour de 16 % alors qu'en Irlande, il passe en un an de 15,8 à 18,0 %.

C'est au Royaume-Uni que la hausse est la plus rapide : entre 1990 et 1991 (novembre), le taux de chômage est passé de 7,4 à 10,2 % soit une augmentation de plus de 40 % en 12 mois.

## PRODUCTION INDUSTRIELLE: Stagnation de la production industrielle dans toute l'Europe

La production industrielle de la Communauté européenne (EUR 12) n'a donné aucun signe de reprise en octobre 1991 et la situation n'était guère différente d'une branche de l'industrie à l'autre. Pour octobre, l'indice de production corrigé des jours ouvrables est actuellement estimé à 121,4 (1985=100) pour EUR 12. Cela correspond à une diminution de 0,6 % par rapport à octobre 1990. Après correction des variations saisonnières, l'indice estimé s'élève à 114,3 en octobre 1991, contre 113,7 le mois précédent. Par rapport à la valeur cumulée de mai, juin et juillet, la production EUR 12 corrigée des variations saisonnières a baissé de 0,9 % au cours des trois derniers mois, août, septembre et octobre; pour l'industrie de transformation (industries extractives non comprises), le taux de variation correspondant était de -1,6 %. Il n'y par conséquent aucun signe de reprise.

Aux Etats-Unis, la production industrielle a stagné à +0,8 % (taux de croissance des trois derniers mois par rapport aux trois mois précédents); au Japon, on observe au contraire un recul de -1,1 % du taux correspondant.

En ce qui concerne les taux de croissance des données corrigées des variations saisonnières des trois derniers mois par rapport aux trois mois précédents, on constate certes des différences entre les évolutions de l'indice de la production de l'ensemble de l'industrie dans les différents Etats membres de la Communauté européenne, mais la tendance générale est également à la stagnation (entre parenthèses, chiffres de l'industrie de transformation sans industries extractives):

Irlande 3,0 % (2,0 %), Espagne 1,0 % (0,5 %), France 0,6 % (0,8 %), Royaume-Uni 0,2 % (-1,0 %), Danemark -0,2 % (-0,2 %), Italie -1,5 % (-1,6 %), Allemagne -1,6 % (-2,7 %), Pays-Bas -3,1 % (-0,5 %).

Dans la construction automobile européenne, la situation s'est nettement dégradée. La production EUR 12 diminue actuellement avec un taux annuel de -2 % (France +5 %, Italie -2 %, Allemagne -3 %, Royaume-Uni -11 %).

## BALANCE DES PAIEMENTS

**TENDANCES MONDIALES: troisième trimestre de 1991 – Poursuite de la détérioration de la balance des opérations courantes de la Communauté; poursuite de la croissance de l'excédent courant du Japon; contraction du déficit courant américain, mais moins importante qu'au trimestre précédent.**

Les chiffres actuellement disponibles pour le troisième trimestre de 1991 indiquent une poursuite de la détérioration de la balance des opérations courantes de la Communauté. Cette détérioration a été beaucoup plus forte qu'au deuxième trimestre, et le déficit courant cumulé des mois de janvier-septembre dépasse de 40 milliards d'écus celui de la période correspondante de 1990. Cette tendance s'explique pour l'essentiel par la contraction rapide de l'excédent commercial de l'Allemagne.

La balance des opérations courantes des Etats-Unis, excédentaire au cours du premier semestre de 1991, a enregistré un déficit de 13,3 milliards d'écus (15,6 milliards de dollars) au troisième trimestre. Ce chiffre est encore inférieur au déficit de 22,5 milliards d'écus (29,1 milliards de dollars) enregistré au cours du trimestre correspondant de 1990, mais l'amélioration d'une année à l'autre est beaucoup plus faible qu'au premier semestre de 1991. Les bons résultats de janvier-juin s'expliquent principalement par le versement des contributions des partenaires de la coalition au financement de la guerre du Golfe, qui a gonflé l'excédent de la balance des invisibles. Le déficit commercial des Etats-Unis s'est réduit de 4,3 milliards d'écus au cours du troisième trimestre d'une année sur l'autre.

L'excédent courant du Japon a augmenté de 10,7 milliards d'écus au troisième trimestre de 1991, ce qui représente une progression moins rapide que pour les deux trimestres précédents. L'accroissement du déficit commercial de l'Espagne au troisième trimestre a été compensé par un excédent plus important de la balance des invisibles. La balance des invisibles des Pays-Bas a diminué au troisième trimestre par rapport au trimestre correspondant de 1990, ce qui a entraîné une réduction de leur excédent courant en base intra-annuelle. La balance des opérations courantes du Danemark s'est améliorée de 0,3 milliards d'écus par rapport au trimestre correspondant de 1990.

## COMMERCE EXTERIEUR

Le déficit du commerce extra-communautaire de septembre est de -7,4 Mds d'écus, soit 1,4 Md d'alourdissement par rapport à septembre 1990. Les importations progressent de 11,7 % entre ces deux dates, alors que l'évolution des exportations est de 9,4 %. Mais la comparaison avec septembre 1990 doit être faite avec prudence, en effet les échanges de ce mois paraissent fortement affectés à la baisse par une conjoncture mondiale instable suite à l'invasion du Koweït. Les exportations communautaires semblent être plus touchées que les importations en septembre 1990, c'est pourquoi l'écart des taux d'évolution des importations et des exportations entre septembre 1990 et 1991 qui est de 2,3 points seulement, doit être analysé comme un écart beaucoup plus grand. Le coût d'approvisionnement de la Communauté en pétrole brut ne peut en aucun cas expliquer l'alourdissement du déficit, vu qu'il est inférieur de près d'un tiers en écu par baril, en septembre 1991 comparé à septembre 1990. Pour les neuf premiers mois de l'année on note un quasi doublement du déficit extra-communautaire (-61,1 Mds d'écus) en 1991 rapporté à 1990, lié à une progression marquée des importations (+8,4 %) tandis que les exportations stagnent.

Le déficit du commerce extérieur des Etats-Unis est de -7 Mds d'écus, alors qu'il atteint -8,2 Mds en septembre 1990. Les exportations sont en progrès de près de 20 % en écus, ramenés à +11 % en dollars, par rapport à septembre 1990. L'évolution des importations de 11 % en écus est réduite à 2 % en dollars.

L'excédent japonais bat tous les records en septembre 1991 avec 6,3 Mds d'écus contre 3,9 Mds en septembre 1990, ce qui amène l'excédent cumulé sur les neuf premiers mois 1991 à 46,9 Mds d'écus. Les importations japonaises augmentent de 4,1 % en écus, mais baissent de près de 5 % en dollars et de 8 % en yens. La hausse de 15,8 % des exportations en écus, revient à +7 % en dollars, et à 4 % en yens.

En septembre 1991, l'excédent commercial de l'Allemagne chute de près de 2 Mds d'écus par rapport à septembre 1990. Celui-ci reste excédentaire de 0,7 Md. L'Allemagne et le Danemark sont les deux pays membres excédentaires en septembre 1991. Les déficits de l'Italie, de l'Espagne et de l'UEBL se creusent respectivement de 0,7 Md, 0,5 Md, et 0,5 Md. Le Royaume Uni et la France réduisent leurs soldes négatifs de 0,7 Md. L'Italie, le Royaume Uni, l'Espagne enregistrent les déficits les plus lourds en septembre 1991, avec près de -2 Mds d'écus chacun.

## „On line“-Abfrage

Eurostatistik beinhaltet zwei verschiedene Tabellentypen:

1. Variablen tabellen – 1 Variable pro Tabelle
2. Ländertabellen – ungefähr 30 Variable pro Land

Jede Zeitreihe ist durch einen neunstelligen numerischen Kode gekennzeichnet, der seinerseits in Unterkodes gegliedert ist, welche – im Falle von „Eurostatistik“ – das Land, den Sektor, die Tabelle, die Einheit und die Periodizität bezeichnen.

Die Bedeutung der einzelnen Unterkodes ist der nachstehend aufgeführten Tabelle zu entnehmen.

Land XX	Sektor XX	Tabelle XXXX	Periodizität und Einheit X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A. Variablen tabellen  XXXX vierstelliger Wert, der im Titel jeder Tabelle erscheint <hr/> B. Ländertabellen  00XX vor dem Titel jeder Variable  (siehe Liste auf der nächsten Seite)	0 jährlich, Angaben in Prozent 1 vierteljährlich, Angaben in Prozent 2 monatlich, Angaben in Prozent 3 jährlich, Indexangaben (1985 = 100) 4 vierteljährlich, Indexangaben (1985 = 100) 5 monatlich, Indexangaben (1985 = 100) 6 jährlich, Angaben in absoluten Werten 7 vierteljährlich, Angaben in absoluten Werten 8 monatlich, Angaben in absoluten Werten 9 Gewicht, EUR 10 = 100 bzw. EUR 12 = 100 (nicht vorhanden für die Ländertabellen)

Beispiele:

1. *Variablen tabelle*: Will man die monatliche Arbeitslosigkeit (in absoluten Zahlen) von Deutschland gemäß Tabelle 0304 dieser Veröffentlichung erfahren, so braucht man nur den Kode 12 93 0304 8 einzugeben.
2. *Ländertabelle*: Will man den Preisindex von Frankreich auf der Basis 1980 = 100 gemäß der Tabelle „Frankreich“ dieser Veröffentlichung erfahren, so braucht man nur den Kode 14 93 0031 3 (jährliche Angaben) oder 14 93 0031 5 (monatliche Angaben) einzugeben.

## ‘On-line’ consultation

Eurostatistics consists of two types of tables:

1. Table by indicators – 1 indicator by table;
2. Table by country including approximately 30 indicators by country.

Each time series is identified by a nine-digit code broken down into subcodes, which in the case of Eurostatistics, represent the country, sector, table, unit and periodicity.

The significance of the different subcodes may be found in the table below.

Country XX	Sector XX	Table XXXX	Periodicity and unit X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A. Table by indicator  XXXX 4-digit value quoted in the title of each table <hr/> B. Table by country  00XX before each indicator (see following page)	0 annual in % 1 quarterly in % 2 monthly in % 3 annual index 1985 = 100 4 quarterly index 1985 = 100 5 monthly index 1985 = 100 6 annual absolute value 7 quarterly absolute value 8 monthly absolute value 9 weighting EUR 10 = 100 or EUR 12 = 100 (does not exist for tables by country)

Consultation example:

1. *Table by indicator*: to know the monthly unemployment (absolute figures) of Germany as is shown in Table 0304 of this publication, the code 12 93 0304 8 should be formed.
2. *Table by country*: to know the price index, 1980 = 100 for France as shown in the France table of this publication, the code 14 93 0031 3 should be formed for annual figures and 14 93 0031 5 for monthly figures.

## Mode de consultation «on-line»

Eurostatistiques comprend deux types de tableaux:

- 1) tableaux par variable – 1 variable par tableau;
- 2) tableaux par pays comprenant environ 30 variables par pays.

Chaque série chronologique est identifiée par un code à neuf chiffres structuré en sous-codes représentant, dans le cas d'Eurostatistiques, le pays, le secteur, le tableau, l'unité et la périodicité.

On trouvera dans le tableau ci-dessous la signification des différents sous-codes.

Pays XX	Secteur XX	Tableau XXXX	Périodicité et unité X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A – Tableaux par variable  XXXX valeur à 4 chiffres figurant dans le titre de chaque tableau <hr/> B – Tableaux par pays  00XX devant le titre de chaque variable  (voir liste page suivante)	0 annuelle exprimée en pourcentage 1 trimestrielle exprimée en pourcentage 2 mensuelle exprimée en pourcentage 3 annuelle exprimée en indice 1985 = 100 4 trimestrielle exprimée en indice 1985 = 100 5 mensuelle exprimée en indice 1985 = 100 6 annuelle exprimée en valeur absolue 7 trimestrielle exprimée en valeur absolue 8 mensuelle exprimée en valeur absolue 9 pondération EUR 10 = 100 ou EUR 12 = 100 (inexistant pour les tableaux par pays)

Exemple de consultation:

- 1) *tableau par variable*: pour connaître le chômage mensuel (chiffres absolus) de la RF d'Allemagne, tel qu'il figure au tableau 0304 de cette publication, il suffit d'appeler le code 12 93 0304 8;
- 2) *tableau par pays*: pour connaître l'indice des prix 1980 = 100 de la France tel qu'il figure au tableau «France» de cette publication, il suffit d'appeler le code 14 93 0031 3 (annuel), 14 93 0031 5 (mensuel).
