Mit der monatlich erscheinenden Veröffentlichung „Eurostatistik“ – Daten zur Konjunkturanalyse werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR 12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

„Eurostatistik“ enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Die Reihen werden jeweils für die letzten 15 Monate, die letzten fünf Quartale und die letzten vier Jahre veröffentlicht, um eine kurz- oder mittelfristige Analyse – gegebenenfalls mit überarbeiteten Zahlen – zu ermöglichen.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung. Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

„Eurostatistik“ besteht aus drei Teilen:

- Die Rubrik „kurz notiert“ gibt die wichtigsten Ereignisse und Entwicklungen der jüngsten Zeit im wirtschaftlichen, finanziellen und sozialen Bereich wieder.
- Im Schaubilderteil werden die wichtigsten Reihen über die wirtschaftliche Entwicklung in der Gemeinschaft, den Mitgliedstaaten, den Vereinigten Staaten und Japan veranschaulicht.
- Im Konjunkturdatenteil werden die Daten, die von Eurostat auf der Grundlage gemeinsamer Kriterien harmonisiert wurden, für sämtliche Mitgliedstaaten dargestellt und mit den Daten der Vereinigten Staaten und Japans verglichen.

Die in „Eurostatistik“ veröffentlichten Daten stammen aus dem „ICG“-Bereich der On-line-Datenbank „Cronos“ von Eurostat.

Wer Zugang zu Cronos besitzt, kann jederzeit die Tabellen dieser Veröffentlichung abfragen, wobei die Daten täglich auf den neuesten Stand gebracht werden. Hinweise zur „on-line“-Benutzung finden sich auf der letzten Seite.

Weitere Informationen über „Eurostatistik“ können bei folgender Stelle angefordert werden:

WECHSELKURSE: Aufwertung des Dollars gegenüber den meisten europäischen Währungen im Januar

Trotz des im Vormonat verzeichneten steigenden Zinsgefälles zwischen den USA und den meisten europäischen Ländern erfuhr der Dollar gegenüber den meisten europäischen Währungen im Januar eine Aufwertung. Diese war zwar nicht besonders hoch, stand jedoch angesichts der relativ niedrigen Renditen von Dollar-Anlagen im Gegensatz zu den Erwartungen der Wirtschaftstheoretiker.

Der Durchschnittskurs des Dollars lag im Januar bei 1,58 DM. Hinter dieser Zahl verbirgt sich jedoch eine Aufwertung in der zweiten Januarhälfte, die auf eine Abwertung in der ersten Woche folgte. Am 18. Februar notierte der Dollar mit 1,648 DM, d.h. 8 % höher als zu Jahresbeginn.

Gegenüber dem japanischen Yen verhielt sich der Dollar etwas anders. Mitte Januar erfolgte eine starke Abwertung, die dazu führte, daß der Durchschnittskurs in diesem Monat niedriger war als im Dezember. Seitdem hat er sich wieder erholt und nun etwa den gleichen Stand wie im Dezember erreicht. Die Schwäche des Yen steht in einem Zusammenhang mit den jüngsten heftigen Kursschwankungen auf dem japanischen Aktienmarkt – der Wert des Nikkei-Index ging seit Jahresbeginn um 12 % zurück.

Die spanische Peseta blieb die stärkste Währung innerhalb des Wechselkursmechanismus des Europäischen Währungssystems (EWS), gefolgt vom holländischen Gulden und der D-Mark. Das Pfund Sterling blieb – dicht nach dem belgischen Franc – die schwächste Währung.

Von allen EWS-Währungen geriet die Peseta im Januar am stärksten in Bewegung: Ihr Wert stieg um 0,6 % gegenüber dem Ecu und lag damit weiterhin deutlich über dem Leitkurs gegenüber anderen EWS-Währungen. Bei den übrigen EWS-Währungen herrschte wenig Bewegung. Das Pfund Sterling, das in der ersten Januarhälfte nur etwas über dem unteren Interventionskurs gegenüber der

D-Mark gehandelt wurde, verbesserte sich in der zweiten Januarhälfte bis Anfang Februar und schloß am 18. Februar zum ersten Mal seit November 1991 innerhalb seiner theoretischen engen Bandbreite gegenüber der D-Mark ab.

RENDITEN VON STAATSANLEIHEN: Weiterer Rückgang im Januar

Im Januar sanken die Renditen von Staatsanleihen in allen EG-Ländern, über die Daten verfügbar sind, nur in Italien blieben sie unverändert. Die stärksten Rückgänge mußten Dänemark (0,5 %) und Deutschland (0,4 %) verzeichnen. Auch in den USA waren die Renditen leicht rückläufig. Diese Rückgänge stehen in einem Gegensatz zum Anstieg der kurzfristigen Zinssätze Ende 1991.

Die folgende Tabelle zeigt die realen (d.h. inflationsbereinigten) Zinssätze des letzten Quartals von 1991:

	langfristige Realverzinsung (Monatsdurchschnitte)		
	Okt.	Nov.	Dez. 1991
Belgien	7,0	6,4	6,2
Dänemark	7,1	6,7	6,5
Deutschland	5,1	4,4	4,3
Spanien	6,1	6,0	6,4
Frankreich	6,8	6,3	6,1
Italien	4,9	4,7	4,7
Luxemburg	5,7	5,5	5,5
Niederlande	4,3	4,1	3,9
Portugal	3,9	3,1	4,0
VK	5,9	5,4	5,1
USA	5,0	4,8	4,5
Japan	3,3	2,8	3,0

Bei den Staatsanleihen wurden 1990 innerhalb der EG real die höchsten Renditen in Dänemark und die niedrigsten in den Niederlanden erzielt. In Dänemark, das EG-weit die niedrigste Inflationsrate und damit eine hohe Realverzinsung aufweist, liegen die Anleihenrenditen noch relativ hoch, obwohl sie in den letzten Monaten gesunken sind. In den Niederlanden liegen die Anleihenrenditen nominal auf etwa gleichem Niveau wie in Dänemark; wegen der höheren Inflationsrate ist die Realverzinsung jedoch niedriger.

GELDVOLUMEN: Geldmengenwachstum in Deutschland höher als geplant

Die Geldmenge M3 stieg im November 1991 auf Jahresbasis umgerechnet um 5,7 % und lag damit über dem Zielkorridor (3–5 %). Aufgrund der starken Bargeldnachfrage und des hohen Kreditwachstums war die Geldmenge in den 3 Vormonaten rascher gewachsen. Die Bundesbank erhöhte die kurzfristigen Zinssätze zuletzt Mitte Dezember.

Im Gegensatz zu der Situation in Deutschland wuchs die Geldmenge in den USA, Japan, Frankreich und dem VK immer noch ausgesprochen langsam; in Frankreich waren die auf Jahresbasis umgerechneten Zuwachsraten der Geldmenge von August bis September jeweils negativ. Die von der Banque de France gesteuerte Geldmenge M3 wuchs im November auf Jahresbasis umgerechnet um 5,2 %, während sie im Oktober mit einem Zuwachs um 4,7 % innerhalb des Zielkorridors lag.

AMTLICHE WÄHRUNGSRESERVEN: Rückgang im Dezember

Die amtlichen Währungsreserven sanken im Dezember in allen Ländern, über die Daten verfügbar sind. In den meisten Fällen handelte es sich dabei um recht starke Abflüsse: 13 % in Italien, 8 % in Griechenland, 7 % in Japan und 6 % in den USA.

Für die gesamten EG-Länder liegen zwar noch keine Daten für Dezember vor, auf der Basis der verfügbaren Daten scheinen die Währungsreserven der EUR 12 jedoch Ende 1991 niedriger zu sein als Ende 1990.

VIERTELJÄHRLICHE GESAMTRECHNUNGEN: 3. Quartal 1991: Erneute Verlangsamung des Wirtschaftswachstums der Gemeinschaft (BIP +0,3 %), begleitet von einem geringfügigen Rückgang der Inflation (+0,9 %)

Nachdem die wirtschaftliche Entwicklung der Gemeinschaft insgesamt im 2. Quartal eine leichte Belebung verzeichnen konnte, war das 3. Quartal durch eine erneute Verlangsamung der BIP-Wachstumsrate (+0,3 %) gekennzeichnet. Dieser neuerliche Rückgang, der mit dem wichtigsten Wirtschaftsindikator völlig im Einklang steht, hat zur Folge, daß die Wachstumsprognosen für das Jahr 1991 erneut nach unten korrigiert werden müssen. Die Gründe für das Anhalten der Stagnationsphase lassen sich als drei einander wechselseitig beeinflussende Faktoren zusammenfassen: Erstens die interne Krise der amerikanischen Volkswirtschaft, zweitens die japanische Handelspolitik und drittens schließlich die Probleme der deutschen Volkswirtschaft nach der Vereinigung. Beim gegenwärtigen Stand der Dinge scheint eine Umkehr der Wirtschaftstendenzen von diesem Jahr an im Bereich des Möglichen zu liegen, jedoch ziehen die Konjunkturforscher selbst es vor, sich nicht zum Umfang dieser Wirtschaftsbelebung zu äußern, da diese von zahlreichen Faktoren abhängt, zu deren wichtigsten die von den Mitgliedstaaten eingeschlagene Währungspolitik zählen dürfte.

Zu den Inflationsdaten auf der Basis des BIP-Deflators ist anzumerken, daß uns nur Daten für die vier großen Länder vorliegen. Auf dieser Grundlage läßt sich eine spürbare Verlangsamung des Preisanstiegs sowohl im Jahresrhythmus als auch für das Vierteljahr feststellen (+0,9 % bzw. +5,0 %). Dieses Ergebnis bestätigt, wenn auch nur langfristig, daß die in den meisten Mitgliedstaaten beschlossene restriktive Währungspolitik gerechtfertigt war und sich in den Anhebungen der Zinssätze im August und danach erneut im Dezember niederschlug.

Hinsichtlich der BIP-Komponenten ist eine Verlangsamung der Investitionstätigkeit (+0,5 %) bei gleichzeitiger leichter Aufwärtsentwicklung des Staatsverbrauchs (0,5 %) zu beobachten, während der private Verbrauch weiterhin stagniert (+0,1 %).

Was die Situation in den einzelnen Mitgliedstaaten betrifft, so ist in Frankreich und vor allen Dingen in den Niederlanden eine recht positive Entwicklung des BIP (+0,7 % bzw. 1,6 %) in Italien, Dänemark und vor allem in Deutschland hingegen eine Verlangsamung (+0,1 %) festzustellen. Im Vereinigten Königreich trat nach vier Quartalen der rückläufigen Entwicklung wieder eine leichte Erholung des Wirtschaftswachstums ein (+0,1 %). Bei der Inflation ist eine allgemeine Verlangsamung zu beobachten, dennoch bleibt die Inflationsrate vor allem in Italien, Deutschland und im Vereinigten Königreich hoch (+1,2 % bzw. 1,2 und 1,0 %). Ferner ist nach der Verlangsamung im 2. Quartal in den Niederlanden eine wenn auch nur geringe Belebung festzustellen (+0,3 %). Bei den Komponenten des BIP ist eine leichte Verlangsamung der Investitionstätigkeit festzustellen, die indessen in Italien, Deutschland und den Niederlanden umfangreich bleibt (+1,6 %, bzw. 1,5 % und 2,6 %). Hingegen ist in Frankreich und vor allem Dänemark ein Aufschwung zu beobachten (+0,1 % und 1,7 %). Im Vereinigten Königreich indessen dauert der Rückgang (–5 %), der vor anderthalb Jahren einsetzte, noch immer an. Die Entwicklung der Binnennachfrage, die stärker ausgeprägt ist als die der Produktion, hat im Laufe dieses Quartals zu einer allgemeinen Verschlechterung der Außenhandelsbilanz in den vier großen Ländern geführt.

In den Vereinigten Staaten ist nach drei Quartalen der verlangsamteten Entwicklung eine leichte Belebung der Produktion (+0,6 %) bei gleichzeitiger deutlicher Verringerung sowohl der vierteljährlichen als auch der jährlichen Inflationsrate (+0,5 % bzw. 3,5 %) zu beobachten. Die wichtigste Entwicklung bei den BIP-Komponenten war in diesem Quartal eine leichte Erholung der Investitionstätigkeit nach zwei deutlich negativen Quartalen.

In Japan hat sich das Wirtschaftswachstum erneut verlangsamt (+0,4 %), bei gleichzeitiger Deflation (–0,2 %). Von den Komponenten der Nachfrage ist der deutliche Einbruch beim Staatsverbrauch (–1,4 %) bei gleichzeitiger Abschwächung des privaten Verbrauchs (+0,8 %) hervorzuheben. Hingegen ist bei den Investitionen nach zwei Quartalen rückläufiger Entwicklung ein schwacher Anstieg zu verzeichnen (+0,1 %).

PREISE = Die jährliche Inflationsrate der EG zum Januar 1992 beträgt 4,7 %

Die Inflationsrate für 12 Monate sank in der gesamten EG im Dezember 1991 von 4,8 auf 4,7 % im Januar 1992. Vor einem Jahr betrug die Rate 5,6 %.

Zwischen Dezember 1991 und Januar 1992 stieg der Verbraucherpreisindex für die gesamte Gemeinschaft um 0,5 %.

Diese Zunahme beruht im wesentlichen darauf, daß der Index in Spanien wegen stark anziehender Nahrungsmittelpreise, Transport- und Gesundheitskosten um 1,5 % spürbar gestiegen ist und sich auch die Indizes in Portugal (+0,9 %) und Italien (+0,8 %) merklich erhöhten.

Auch in Deutschland, Frankreich (*) und Luxemburg (alle 0,4 %), sowie in Belgien (+0,3 %) und Griechenland (+0,1 %) gab es Zuwächse.

Sinkende Verbraucherpreisindizes gab es in den Niederlanden (–0,3 %), in Dänemark (–0,2 %) und im Vereinigten Königreich (–0,1 %). Diese Tendenz in den drei Mitgliedstaaten ist im wesentlichen auf die Auswirkungen der Winterschlußverkäufe bei Bekleidung, Schuhen und Haushaltsgütern zurückzuführen.

Derzeit liegen die Inflationsraten in acht von zwölf Mitgliedstaaten unter dem Durchschnittswert von 4,7 %.

In zunehmender Reihenfolge stellen sich die Inflationsraten nach Ländern wie folgt dar:

	JAN. 92	JAN. 91	JAN. 92	JAN. 91	
	JAN. 91	JAN. 90	JAN. 91	JAN. 90	
Dänemark	2,1 %	2,5 %	Niederlande	4,1 %	3,4 %
Belgien	2,3 %	3,9 %	Vereinigtes Königreich	4,1 %	9,0 %
Luxemburg	2,9 %	3,0 %	Spanien	5,9 %	6,8 %
Frankreich*	3,0 %	3,5 %	Italien	6,3 %	6,3 %
Irland**	3,6 %	2,7 %	Portugal	8,6 %	13,0 %
Deutschland***	4,0 %	2,8 %	Griechenland	18,1 %	21,7 %

* Eurostat-Schätzung

** November im Vergleich zum November des Vorjahres

*** Der Verbraucherpreisindex für die Bundesrepublik Deutschland entspricht weiterhin den Gebietsverhältnissen vor dem 3. Oktober 1990.

Oben genannte Zahlen verdeutlichen, daß sich im Vergleich zum Vorjahr die Inflationsrate in sämtlichen Mitgliedstaaten verlangsamt, mit Ausnahme von Deutschland, den Niederlanden, Irland und Italien. Die gleiche Entwicklung läßt sich in den Vereinigten Staaten (2,6 % gegenüber 5,7 %) und in Japan (2 % gegenüber 4 %) feststellen.

ARBEITSLOSIGKEIT IN DER GEMEINSCHAFT

Eurostat schätzt die Arbeitslosenquote in der Gemeinschaft für Dezember 1991 auf 9,2 %; sie bleibt damit auf demselben Stand wie im Vormonat. Dieser Wert ist saisonbereinigt. Einflüsse der unterschiedlichen nationalen Methoden zur Erfassung der Arbeitslosigkeit sind weitgehend ausgeschaltet.

1991 lag die Anzahl der Arbeitslosen in der Gemeinschaft nach Definition des Internationalen Arbeitsamtes (ILO) leicht über 13 Millionen Arbeitslosen, während mehr als 15 Millionen Personen bei den Arbeitsämtern der 12 Mitgliedstaaten eingeschrieben waren.

In einem Jahr ist die Anzahl der Arbeitslosen um 880 000 Personen (+7,3 %) angestiegen, darunter allein 770 000 Personen (+36 %) aus dem Vereinigten Königreich. Der Anstieg der Arbeitslosigkeit betrug in Luxemburg und Irland über 10 %, in Belgien, Italien, Frankreich und in Dänemark zwischen 6 und 9 %. Andererseits ist die Arbeitslosigkeit in den Niederlanden um 7 %, in der Bundesrepublik Deutschland (alte Bundesländer) um 10 % und in Portugal um 14 % zurückgegangen.

Die Zunahme der Arbeitslosigkeit ist deutlicher bei den Männern (+11,1 %) als bei den Frauen (+3,9 %) sowie bei den Personen ab 25 Jahren (+8,3 %) als bei den Jugendlichen (+5,3 %). Der Anteil der Frauen an der Gesamtzahl der Arbeitslosen liegt 1991 wieder bei 51 %, 1990 waren es noch 53 %.

Bei einem Anstieg von 0,6 Prozentpunkten gegenüber 1990, wird die Arbeitslosenquote in der Gemeinschaft 1991 auf 8,9 % geschätzt. Sie liegt in den Vereinigten Staaten bei 6,7 % und in Japan bei 2,1 %.

In fünf Mitgliedstaaten: Belgien, Dänemark, dem Vereinigten Königreich, Frankreich und Italien liegt die Arbeitslosenquote zwischen 8 und 10,5 %, in Griechenland und den Niederlanden bei 7 %, in der Bundesrepublik Deutschland (alte Bundesländer) und in Portugal um 4 %. In Luxemburg sind 2 % der Erwerbspersonen arbeitslos, in Spanien und Irland etwa 16 %.

INDUSTRIELLE PRODUKTION: Industrielle Entwicklung ohne Schwung

Im November 1991 zeigte die Industrieproduktion der Europäischen Gemeinschaft (EUR 12) wiederum kein Zeichen einer Wende, wobei auch für die einzelnen Wirtschaftszweige innerhalb der Industrie wenig Unterschiede feststellbar sind. Der arbeitstäglich bereinigte Produktionsindex wird für November für EUR 12 derzeit auf 123,7 geschätzt (1985=100). Dies entspricht einer Jahreswachstumsrate des Index gegenüber November 1990 von 0,4 %. Nach Saisonbereinigung beträgt der geschätzte Index im November 1991 114,6, im Vormonat war er bei 114,3. Verglichen mit dem kumulierten Wert der Sommermonate Juni, Juli, August sank die saisonbereinigte EUR 12 Produktion in den letzten drei Monaten September, Oktober, November um 0,2 %, wobei für die einzelnen Gütergruppenarten folgende Wachstumsraten zu verzeichnen sind: Grundstoffindustrie 0,1 %, Investitionsgüterindustrie -1,2 %, Konsumgüterindustrie 0,3 %. Die Stagnation der Industrieproduktion setzt sich somit fort.

In den USA stagniert die Industrieproduktion bei +0,5 % (Wachstumsrate der letzten drei Monate gegenüber den davorliegenden drei Monaten); auch in Japan ist Stagnation der Industrieproduktion (0,0 % der entsprechenden Wachstumsrate) zu beobachten.

Betrachtet man die Wachstumsrate der saisonbereinigten Daten der letzten drei Monate gegenüber den davorliegenden drei Monaten, so sind in den einzelnen Mitgliedstaaten der Europäischen Gemeinschaft für den Produktionsindex der gesamten Industrie zwar Unterschiede zu verzeichnen, doch deutete die generelle Tendenz auch hier auf Stagnation hin (in Klammern jeweils Investitionsgüterindustrie): Irland 5,0 % (6,0 %), Frankreich 0,5 % (-0,4 %), Spanien 0,1 % (0,4 %), Vereinigtes Königreich -0,4 % (-0,9 %), Italien 0,7 % (-2,8 %), Deutschland -0,8 % (-1,1 %), Dänemark -1,0 % (-0,7 %), Niederlande -2,6 % (-2,2 %).

Schätzt man den noch fehlenden Monat Dezember 1991 für die einzelnen Länder (und im Bedarfsfalls auch den Monat November), so ergibt sich folgende Jahreswachstumsrate 1991 gegenüber 1990 für die Industrieproduktion (NACE 1-4): EUR 12: -0,1 %, USA, -2,0 %, Japan +2,5 %, Irland +3,3 %, Deutschland +3,2 %, Niederlande +2,5 %, Dänemark +2,1 %, Frankreich +0,4 %, Spanien -1,0 %, Italien -1,6 %, Vereinigtes Königreich -3,0 %.

ZAHLUNGSBILANZ

Zahlungsbilanz. Drittes Quartal 1991. Das Leistungsbilanzdefizit der Gemeinschaft verschlechterte sich im Vergleich zum dritten Quartal 1990 um nahezu 13 Milliarden ECU. Die Leistungsbilanzsalden der USA und Japans verbessern sich.

Die gegenwärtig verfügbaren Daten zeigen eine deutliche Abwärtstendenz der Leistungsbilanz der Gemeinschaft. Für die ersten drei Quartale des Jahres soll sich das Defizit auf 40 Milliarden ECU belaufen, während es für den gleichen Zeitraum 1990 nur 8 Milliarden betrug. Diese negative Tendenz hängt vor allem mit der Schrumpfung des deutschen Handelsbilanzüberschusses zusammen, der die drei ersten Quartale von 1991 10,5 Milliarden ECU gegenüber 48 Milliarden im gleichen Zeitraum von 1990 beträgt.

Während der ersten drei Quartale von 1991 hat sich die amerikanische Leistungsbilanz rasch verbessert und stieg von einem kumulierten Defizit von 55,4 Milliarden ECU im Jahre 1990 auf einen Überschuss von 2,2 Milliarden. Die Zahlung von Barbeiträgen von den alliierten Partnern der USA im Golfkrieg ließ den Dienstleistungs- und Übertragungsbilanzsaldo im Verlauf der ersten beiden Quartale von 1992 anschwellen. Im Vergleich zum entsprechenden Zeitraum von 1990 gab es Überschüsse in Höhe von nahezu 32 Milliarden ECU. Allerdings verlangsamte sich diese Entwicklung und im dritte Quartal 1991 flaut die positive Tendenz leicht ab.

1991 40 Milliarden ECU im Vergleich zu 22,5 Milliarden im Jahre 1990. Die japanische Handelsbilanz steigt kräftig an, vor allem im dritten Quartal, mit einer Verbesserung um 10 Milliarden ECU im Vergleich zum Vorjahr.

In Frankreich und im Vereinigten Königreich kommt es im dritten Quartal 1991 im Vorjahresvergleich zu einer spürbaren Verbesserung der Leistungsbilanz, die im wesentlichen auf den Warenhandel zurückzuführen ist. In Spanien und Dänemark fällt der Rückgang des Handelsbilanzdefizits bescheidener aus. In den Niederlanden und vor allem Italien kommt es zu einer merklichen Verschlechterung der Leistungsbilanz. Grund hierfür ist in Italien der Warenhandel und in den Niederlanden die Dienstleistungs- und Übertragungsbilanz.

AUSSENHANDEL

Im Oktober 1991 betrug das Defizit im außergemeinschaftlichen Handel 4,6 Mrd. ECU. Es hat sich somit gegenüber Oktober 1990 um 0,6 Mrd. verbessert und lag noch unter dem Durchschnittswert für das dritte Quartal 1991. Der Rückgang des deutschen Überschusses aus dem Handel mit Drittländern im Vergleich zum Vorjahresmonat wurde durch die Verbesserung der Salden des außergemeinschaftlichen Handels Frankreichs, Italiens, der BLWU und Spaniens mehr als ausgeglichen. Die Steigerungsraten der Ein- und Ausfuhren unterschieden sich gegenüber Oktober 1990 nur um 1,8 Prozentpunkte, wobei die Ausfuhren schneller zunahmen als die Einfuhren: 3 % gegenüber 1,2 %. Die Kosten für die Rohölversorgung der Gemeinschaft, die im Oktober 1990 einen Höchststand von 36 \$ je Barrel erreichten, sind im Oktober 1991 auf fast 20 \$ je Barrel gefallen und sorgten somit für eine wertmäßige Abnahme der Brennstoffeinfuhren. Dieser Rückgang wird zwar teilweise durch den Kursgewinn des Dollars von 11,6% zwischen Oktober 1990 und Oktober 1991 abgeschwächt, bleibt aber dennoch bemerkenswert.

Das amerikanische Handelsbilanzdefizit belief sich im Oktober 1991 auf 9 Mrd. ECU, was einem Rückgang von 1,3 Mrd. gegenüber dem Vorjahresmonat entspricht. Die Einfuhren, ausgedrückt in Ecu, sind zwischen Oktober 1990 und Oktober 1991 um 9,6 % gestiegen, dies ist jedoch eher auf den Kursgewinn des Dollars gegenüber dem Ecu zurückzuführen; ausgedrückt in Dollar betrug das Wachstum der Importe nur 2 %. Die Ausfuhren, die stärker zunahmen als die Einfuhren, verzeichneten, in Ecu gerechnet, Zuwachsraten von 18,7 % und, in Dollar gerechnet, von 7 %.

Die japanische Handelsbilanz bestätigte die im dritten Quartal 1991 zu beobachtende Entwicklung mit einem weiterhin hohen Überschuss von 5,3 Mrd. ECU. Im Vergleich zum Oktober 1990 sind die Einfuhren, ausgedrückt in Ecu, stabil geblieben; ausgedrückt in Yen bzw. Dollar entspricht dies jedoch einem Rückgang von 11 %. Die Ausfuhren verzeichneten hohe Zuwachsraten: 18,1 % in Ecu, entsprechend fast 7 % in Yen und Dollar.

Der deutsche Handelsbilanzüberschuss verringerte sich im Vergleich zum Oktober 1990 um 3 Mrd. ECU. Von diesem Rückgang ist sowohl der inner- als auch der außergemeinschaftliche Handel betroffen. Dennoch kann die Bundesrepublik Deutschland von allen Mitgliedstaaten erneut den höchsten Überschuss verzeichnen. Die Bilanzen Dänemarks, Frankreichs, der BLWU und der Niederlande sind ausgeglichener. Frankreich konnte seine Bilanz sowohl im inner- als auch im außergemeinschaftlichen Handel um 1,6 Mrd. verbessern. Die Bilanzen Griechenlands, Portugals und Italiens weisen Defizite von fast 1 Mrd. auf. Im Vergleich zu Oktober 1990 erscheint ihre Position unverändert. Spanien und das Vereinigte Königreich verzeichneten Defizite von fast 2 Mrd. ECU. Das Vereinigte Königreich weist eine ausgeglichene Bilanz des innergemeinschaftlichen Handels auf, verzeichnet jedoch auch das höchste Außenhandelsdefizit.

Eurostatistics – data for short-term economic analysis – is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR 12), each Member State, the United States and Japan.

Eurostatistics does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

The series are published for the last 15 months, the last five quarters and the last four years, thus permitting short- or medium-term analysis with figures that may have been revised where necessary.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

Eurostatistics comprises three sections:

- The 'In brief' section outlines the main recent events and trends in the economic, financial and social fields.
- The 'Graphs' section illustrates the most significant economic series for the Community, its Member States, the United States and Japan.
- The 'Short-term trends' section presents data harmonized by Eurostat on the basis of common criteria for the Member States as a whole, with comparisons with the USA and Japan.

The data published in *Eurostatistics* are taken from the ICG domain of Eurostat's on-line data bank, Cronos.

By linking up to Cronos it is possible to obtain daily the tables presented in this publication, containing data updated daily. The method of consultation can be found at the end of this publication.

Further information about *Eurostatistics* can be obtained from the following address:

Unless otherwise stated, data for the Federal Republic of Germany, including West Berlin, as constituted prior to 3 October 1990.

EXCHANGE RATES: Dollar appreciates against most EC currencies in January

The dollar appreciated against most EC currencies during January, despite the increase in the interest rate differential between it and the European currencies which was reported on last month. The appreciation was in January was not particularly large, but nevertheless it was contrary to what economic theory would suggest, given the relatively low yield of dollar denominated assets.

The dollar's average value in January against the DM was DM 1.58, but this figure hides its appreciation in the second half of January, following a depreciation in the first week. Its value on February 18th however was DM 1.648, almost 8% up on its value at the start of the year.

Against the Japanese yen the dollar's performance has been slightly different: it depreciated strongly in mid-January, and thus its average January figure was lower than that of December, but since then it has appreciated, and now stands at around the same value as it was in December. The weakness of the yen is linked to the recent volatility of the Japanese stock market: the Nikkei share index has lost over 12% of its value since the beginning of the year.

The Spanish peseta remains the strongest currency in the Exchange Rate Mechanism (ERM) of the EMS, followed by the Dutch guilder and the German mark. Sterling remains the weakest currency, with the Belgian franc just above it.

The peseta experienced the greatest movement of any ERM currency in January: it appreciated 0.6% against the ecu and remains significantly above its central rate against other ERM currencies. There was little movement among the other ERM currencies; Sterling, which for the first half of January had been trading close to its lower limit against the Deutschmark, strengthened in the second half of January and early February, and on February 18th it closed within its theoretical narrow margin against the DM for the first time since November 1991.

GOVERNMENT BOND YIELDS: Yields continue to fall in January

During January, government bond yields fell in all EC countries for which data are available, with the exception of Italy, where yields remained constant. The greatest falls occurred in Denmark (0.5%) and Germany (0.4%). Yields also fell slightly in the US.

These falls are on contrast to the increases in short-term interest rates which occurred at the end of 1991.

The table below gives the levels of real (ie inflation adjusted) interest rates in the last three months of 1991:

	Real Long term Interest Rates (monthly averages)		
	10/91	11/91	12/91
Belgium	7.0	6.4	6.2
Denmark	7.1	6.7	6.5
Germany	5.1	4.4	4.3
Spain	6.1	6.0	6.4
France	6.8	6.3	6.1
Italy	4.9	4.7	4.7
Luxembourg	5.7	5.5	5.5
Netherlands	4.3	4.1	3.9
Portugal	3.9	3.1	4.0
UK	5.9	5.4	5.1
United States	5.0	4.8	4.5
Japan	3.3	2.8	3.0

Within the EC, the highest real government bond yields at the end of 1991 occurred in Denmark, and the lowest in the Netherlands. Denmark has the lowest inflation in the EC, but its bond yields are still relatively high, and thus the level of real yields is high, although they have fallen in recent months due to the falls in bond yields. The Netherlands, on the other hand, is experiencing nominal bond yields at around the same levels as those of Denmark, but has higher inflation, and thus lower real yields.

The largest increase in real yields in 1991 occurred in the UK, from 1.2% in January 1991 to 5.1% in December. This was as a result of large falls in inflation, accompanied by only slight falls in nominal yields.

MONEY SUPPLY: Monetary growth in Germany exceeds target range

The growth of M3 in Germany exceeded its target range (3-5%) in November 1991, growing by an annualised rate of 5.7%. The pace of monetary growth has quickened in the 3 months to November, as a result of a strong demand for cash and high credit growth. The Bundesbank last raised short-term interest rates in mid-December.

Contrary to the situation in Germany, monetary growth is still extremely slow in the US, Japan, France and the UK; in France, the annualised growth rate of M2 in each of the 3 months to November was negative. The variable that is targeted by the Banque de France however is M3, which grew at an annualised rate of 5.2% in November, up from 4.7% in October, within its target range of 4-6%.

FOREIGN OFFICIAL RESERVES: reserves fall in December

Foreign official reserves fell in December in all countries for which data are available. In most cases, the falls were fairly large: there was an outflow of 13% from Italy, 8% from Greece, 7% from Japan and 6% from the US.

Data for all EC countries are not yet available for December, but on the basis of what data are available, it seems that EUR 12's reserves will be lower at the end of 1991 than they were at the end of 1990.

QUARTERLY ACCOUNTS: Third quarter of 1991: further slowing down of the Community economy (GDP +0.3%), accompanied by an appreciable fall in inflation (+0.9%)

After the slight upturn recorded in the second quarter, the main feature of the Community economy in the third quarter of 1991 was a further decline in the output growth rate (GDP

+0.3%). This is entirely consistent with the most important economic indicator and means that the economic growth forecasts for 1991 will have to be revised downwards again. The continuing phase of stagnation can be attributed to three interacting factors: firstly, the internal crisis in the American economy; secondly, Japan's trade policy; lastly, the problems of the German economy after unification. As things stand at present, it seems that the economic trends may start to turn round from this year, but the economists themselves prefer not to estimate the extent of this upturn, linking it to many factors, one of the most important of which seems to be the monetary policy adopted by the Member States.

As regards inflation measured by the implicit GDP deflator, data are available for the four major countries only. They show an appreciable slowdown in both the annual and quarterly rates of price increase (+5.0% and +0.9% respectively). This result is particularly significant because it is the first time since the third quarter of 1989 that inflation has remained below 1%. It confirms the soundness of the restrictive monetary policy adopted in the majority of Member States, characterized by the increases in interest rates during August and, more recently, before the end of December.

As far as the components of GDP are concerned, there was a slowdown in investment (+0.5%), accompanied by a slight upturn in public consumption (+0.5%), whereas private consumption continued to stagnate (+0.1%).

Of the Member States, France and especially the Netherlands recorded a fairly positive trend in GDP (+0.7% and +1.6% respectively), whereas Italy, Denmark and, above all, Germany showed a declining growth rate (+0.1%). In the United Kingdom there was a slight upturn in output (+0.1%) following four consecutive quarterly falls. Inflation slowed down generally, but it is still high, especially in Italy, Germany and the United Kingdom (+1.2%, 1.2% and 1.0% respectively). Moreover, there was a very slight upturn (+0.3%) in the Netherlands, following the fall recorded in the second quarter.

As regards the components of GDP, there was a slight slowdown in investment, which nevertheless remained at a high level in Italy, Germany and the Netherlands (+1.6%, +1.5% and +2.6% respectively). On the other hand, investment picked up again in France and especially Denmark (+0.1% and +1.7% respectively), while in the United Kingdom the phase of recession that began a year and a half ago continued (-0.5%). The trend in domestic demand, which was more pronounced than the trend in output, resulted in a general deterioration in the four major countries' external position during this quarter.

In the United States there was a slight upturn in output (+0.6%) following three consecutive quarterly falls, accompanied by a significant drop in both quarterly and annual inflation (+0.5% and +3.5% respectively). The main feature of this quarter as regards the components of GDP was a slight upturn in investment after two sharp falls in successive quarters.

In Japan there was a further slowdown of the economy (+0.4%), accompanied by slightly negative inflation (-0.2%). As regards the components of demand, the most notable feature was the sharp fall in public consumption (-1.4%) along with a slowdown in private consumption (+0.8%). In contrast, there was a slight upturn in investment (+0.1%) following two consecutive quarterly falls.

CONSUMER PRICES: EC annual inflation rate 4.7% in January 1992

The inflation rate over 12 months for the Community as a whole fell from 4.8% in December 1991 to 4.7% in January 1992. A year ago this rate was 5.6%.

Between December 1991 and January 1992 the CPI for the EC as a whole rose by 0.5%.

This marked increase was mainly due to a sharp rise in the index of Spain (+1.5%), caused by large increases for food, transport and medical services, as well as significant increases in the indices of Portugal (+0.9%) and Italy (+0.8%).

Rises were also recorded in the indices of Germany, France (*) and Luxembourg (all +0.4%), Belgium (+0.3%) and Greece (+0.1%).

There was a decrease in the CPIs of the Netherlands (-0.3%), Denmark (-0.2%) and the United Kingdom (-0.1%).

The fall in the indices of these 3 Member States was mainly caused by the winter sales for clothing, footwear and household goods.

At present 8 Member States out of the 12 have inflation rates below the EC average of 4.7%.

In order of increasing current inflation rates the figures are as follows:

	JAN 92 JAN 91	JAN 91 JAN 90	JAN 92 JAN 91	JAN 91 JAN 90	
Denmark	2.1%	2.5%	Netherlands	4.1%	3.4%
Belgium	2.3%	3.9%	United Kingdom	4.1%	9.0%
Luxembourg	2.9%	3.0%	Spain	5.9%	6.8%
France*	3.0%	3.5%	Italy	6.3%	6.3%
Ireland**	3.6%	2.7%	Portugal	8.6%	13.0%
Germany***	4.0%	2.8%	Greece	18.1%	21.7%

* Eurostat Estimate

** November compared with November

*** The CPI for the Federal Republic of Germany continues to reflect the geographic borders prior to 3 October 1990.

The above figures show that inflation is lower than a year ago in all EC Member States, except Germany, the Netherlands, Ireland and Italy.

The same trend can be observed in the USA (2.6% against 5.7%) and Japan (2.0% against 4.0%).

UNEMPLOYMENT IN THE COMMUNITY

The seasonally-adjusted unemployment rate in the European Community is estimated by Eurostat at 9.2% for the month of December 1991. This represents the same level as the previous month. The rate is estimated after correction of the differences between national methods of recording unemployment.

In 1991, the number of unemployed persons in the Community, based on the International Labour Office definition, was slightly more than 13 million while over 15 million persons were registered in the employment offices of the twelve Member States.

In one year, unemployment increased by 880 000 persons (+7.3%), 770 000 of whom came from the United Kingdom alone (+36%).

The rise in unemployment was more than 10% in Luxembourg and Ireland, and between 6 and 9% in Belgium, Italy, France and Denmark. By contrast, unemployment fell by 7% in the Netherlands, 10% in the western part of the Federal Republic of Germany and 14% in Portugal.

The rise in unemployment was more noticeable among males (+11.1%) than females (+3.9%), among persons aged 25 and over (+8.3%) than young persons (+5.3%). The proportion of women in unemployment was 51% in 1991 compared to 53% in 1990. The rate of unemployment in the European Community is estimated at 8.9% for 1991, a rise of 0.6 percentage points in relation to 1990. It is 6.7% in the United States and 2.1% in Japan.

Five countries, Belgium, Denmark, the United Kingdom, France and Italy have an unemployment rate between 8 and 10.5%, while the rate is 7% in Greece and the Netherlands, and around 4% in the western part of the Federal Republic of Germany and Portugal. 2% of the active population in Luxembourg are unemployed compared to around 16% in Spain and Ireland.

INDUSTRIAL PRODUCTION: Industrial development sluggish

There was still no sign of a turnaround in industrial production in the European Community (EUR 12) in November 1991, nor was there much difference in the trends recorded by the individual branches of industry. The EUR 12 production index, adjusted for the number of working days, is currently estimated at 123.7 (1985=100) for November, representing an annual increase of 0.4% over November 1990. After seasonal adjustment, the estimated index for November 1991 is 114.6, as against 114.3 in October. The seasonally-adjusted EUR 12 production index for September, October and November fell by 0.2% from the cumulative figure for the summer months of June, July and August, and the growth rates recorded for the individual types of goods were as follows: intermediate goods industry +0.1%, investment goods industry -1.2%, consumer goods industry +0.3%. There is therefore still no end to the stagnation in industrial production.

Growth in industrial production in the USA has remained stable at 0.5% (quarter-on-quarter growth rate), and industrial production in Japan is also showing signs of stagnation (corresponding growth rate of 0.0%).

When each Member State's seasonally-adjusted production index of all industry for the last three months is compared with that for the preceding three months, different rates of change do emerge at national level, but here too the general trend is towards stagnation. The rates of change are as follows, with figures for the investment goods industry in brackets: Ireland 5.0% (6.0%), France 0.5% (-0.4%), Spain 0.1% (0.4%), United Kingdom -0.4% (-0.9%), Italy 0.7% (-2.8%), Germany -0.8% (-1.1%), Denmark -1.0% (-0.7%), Netherlands -2.6% (-2.2%).

Figures are not yet available for December 1991, but by estimating these data (and, where necessary, also the November data) for the individual countries, annual figures can be produced for the growth rate in industrial production (NACE 1-4) in 1991 compared with 1990. These are as follows: EUR 12 -0.1%, USA -2.0%, Japan +2.5%, Ireland +3.3%, Germany +3.2%, Netherlands +2.5%, Denmark +2.1%, France +0.4%, Spain -1.0%, Italy -1.6%, United Kingdom -3.0%.

BALANCE OF PAYMENTS

Balance of payments. Third quarter of 1991. The Community's current account balance of payments deficit was almost ECU 13 000 million greater than in the third quarter of 1990. However, current account balances with the USA and Japan showed some improvement.

The figures available at present show a marked negative trend in the Community's current account balance. Over the first three quarters of the year, the deficit reached almost ECU 40 000 million, while this figure was only 8 000 million over the same period in 1990. This worsening of the situation is largely due to the reduction in Germany's trade surplus, which was only ECU 10 500 million over the first three quarters of 1991 compared with 48 000 million over the same period in 1990.

Over the first three quarters of 1991, there was a swift improvement in the current account balance with the USA, from a cumulated deficit of ECU 55 400 million in 1990 to a surplus of 2 200 million. The contributions paid by the members of the coalition for financing the Gulf War increased the USA's invisible balance over the first two quarters of 1991, with an increase in revenue of almost 32 000 million compared with the same period in 1990. However, this process is slowing down and the improvement was less marked in the third quarter of 1991.

Japan's surplus on current account was ECU 40 000 million in the first three quarters of 1991 compared with 22 500 million in 1990. Japan's trade balance improved vigorously, particularly in the third quarter, when it was ECU 10 000 million up on the previous year.

The current account balances of France and the United Kingdom improved very substantially in the third quarter of 1991 compared with the third quarter of 1990, particularly as a result of trade in goods. Spain and Denmark saw a more modest reduction in their current account deficit. The current account balances of the Netherlands and, in particular, Italy deteriorated quite appreciably because of trade in goods in the case of Italy and invisible trade in the case of the Netherlands.

EXTERNAL TRADE

The Community's external trade deficit in October 1991 was ECU 4 600 million, a slight improvement of ECU 600 million over October 1990 and below the average for the third quarter of 1991. The fall in the German surplus for extra-Community trade compared with October 1990 was more than offset by the improvement in the extra-Community trade balances of France, Italy, the BLEU and Spain. The difference in the rate of increase between imports and exports in relation to October 1991 was only 1.8 percentage points, with exports growing more quickly (+3% against +1.2%). The drop in the cost of the Community's crude oil supplies between the two periods reduced expenditure on energy imports. The price of a barrel of oil reached a high of \$36 in October 1990, but fell back to close to \$20 in October 1991. This represented a substantial fall, although it was partly offset by the rise in the dollar over the same period (+11.6%).

The United States' external trade deficit reached ECU 9 000 million in October 1991, an improvement of ECU 1 300 million compared with October 1990. Imports rose by 9.6% in ecu terms between October 1990 and October 1991, but this was more a reflection of the appreciation of the dollar against the ecu, and in dollar terms the increase was only 2%. Exports recorded a more sustained rise of 18.7% in ecu terms and 7% in dollar terms.

The Japanese surplus for October 1991 remained high at ECU 5 300 million, in keeping with the trend for the third quarter of 1991. Imports in ecu terms stagnated compared with October 1990, with a fall of the order of 11% in terms of both the yen and the dollar. Exports moved ahead strongly: +18.1% in ecus and almost 7% in yen and dollars.

Germany's trade surplus fell by ECU 3 000 million compared with October 1990, both intra- and extra-Community trade being affected. Nevertheless, Germany's surplus remained the highest among the Member States. Denmark, France, the BLEU and the Netherlands were closer to a balanced trade position. France showed an improvement of ECU 1 600 million, on both extra- and intra-Community trade. Greece, Portugal and Italy had deficits approaching ECU 1 000 million and their situation appeared unchanged compared with October 1990. Spain and the United Kingdom had deficits nearing ECU 2 000 million. The United Kingdom had restored a balance in its intra-Community trade, but had the highest deficit on extra-Community trade.

«Eurostatistiques – Données pour l'analyse de la conjoncture» est une publication mensuelle qui a comme but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR 12), pour les pays membres ainsi que pour leurs principaux partenaires extracommunautaires (États-Unis d'Amérique et Japon).

«Eurostatistiques» ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les importantes parmi celles-ci.

Afin de permettre des analyses diverses et, si nécessaire, à plus long terme, sont publiées généralement des données annuelles sur une période de quatre ans, des données trimestrielles pour les cinq derniers trimestres et des données mensuelles pour les quinze derniers mois disponibles.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, disponibles d'ailleurs dans les publications spécialisées d'Eurostat.

«Eurostatistiques» contient trois types d'informations, actualisés mensuellement:

- la rubrique «en bref» commente les principaux événements et tendances résultant des évaluations récentes;
- la partie «Graphiques» illustre les séries économiques les plus importantes pour la Communauté, les États membres, les États-Unis et le Japon;
- la partie «Données conjoncturelles» présente des données harmonisées par Eurostat sur la base des critères communs, pour l'ensemble des États membres et avec des comparaisons avec les États-Unis et le Japon;

Les données publiées dans «Eurostatistiques» proviennent du domaine «ICG» de la base de données Cronos.

En se connectant à Cronos, il est possible de suivre la mise à jour des tableaux de cette publication journalièrement en consultant les données en temps réel. Le mode de consultation «on line» se trouve à la fin de cette publication.

Sauf indications contraires, les données portent sur le territoire de la République fédérale d'Allemagne avant le 3.10.1990, Berlin-Ouest inclus.

TAUX DE CHANGE: Le dollar s'apprécie contre la plupart des monnaies CE en janvier

Le dollar s'est apprécié contre la plupart des monnaies CE en janvier malgré l'accroissement du différentiel de taux d'intérêt entre lui et les monnaies européennes observées au cours du mois dernier. L'appréciation n'était pas particulièrement importante en janvier, mais, néanmoins, elle contredisait la théorie économique étant donné le rendement relativement bas des avoirs libellés en dollars.

La valeur moyenne du dollar en janvier contre le mark était de DM 1,58, mais ce chiffre s'est apprécié au cours de la seconde moitié de janvier après une dépréciation au cours de la première semaine. Toutefois, le 18 février, sa valeur était de DM 1,648, soit près de 8 % au-dessus de sa valeur du début de l'année.

Contre le yen japonais, la performance du dollar a été légèrement différente: il s'est fortement déprécié à la mi-janvier, de sorte que son chiffre moyen de janvier était inférieur à celui de décembre, mais depuis, il s'est apprécié et se tient maintenant aux alentours de la même valeur qu'il avait atteinte en décembre. La faiblesse du yen est liée à la récente volatilité du marché boursier japonais: l'indice Nikkei a perdu plus de 12 % de sa valeur depuis le début de l'année.

La peseta espagnole demeure la devise la plus forte dans le mécanisme de taux de change (MTC) du SME, suivie par le florin néerlandais et le mark allemand. Le sterling demeure la monnaie la plus faible, avec le franc belge juste au-dessus de lui.

La peseta a effectué du plus fort mouvement des monnaies du MTC en janvier: elle s'est appréciée de 0,6 % contre l'écu et demeure très nettement au-dessus de son taux central contre les monnaies du MTC. Les autres monnaies du MTC ont très légèrement varié; le sterling qui durant la première moitié de janvier s'est traité tout près de sa limite inférieure contre le deutsche mark, s'est redressé au cours de la seconde moitié de janvier et au début de février de sorte que le 18 février, il a terminé à l'intérieur de sa marge étroite théorique contre le DM, et ce, pour la première fois depuis novembre 1991.

RENDEMENTS DES OBLIGATIONS D'ETAT: Les rendements continuent de baisser en janvier

Au cours de janvier, les rendements des obligations d'Etat pour lesquels des données sont disponibles, ont baissé dans tous les pays de la CE à l'exception de l'Italie où ils sont restés constants. Les plus fortes chutes ont eu lieu au Danemark (0,5 %) et en Allemagne (0,4 %). Les rendements ont aussi légèrement fléchi aux EU. Ces chutes contrastent avec les hausses des taux d'intérêt à court terme qui se sont produites à la fin de 1991.

Le tableau ci-dessous indique les niveaux des taux d'intérêt réels (c'est-à-dire corrigés de l'inflation) au cours des trois derniers mois de 1991:

	Taux d'intérêt long terme réels (moyennes mensuelles)		
	10/91	11/91	12/91
Belgique	7,0	6,4	6,2
Danemark	7,1	6,7	6,5
Allemagne	5,1	4,4	4,3
Espagne	6,1	6,0	6,4
France	6,8	6,3	6,1
Italie	4,9	4,7	4,7
Luxembourg	5,7	5,5	5,5
Pays-Bas	4,3	4,1	3,9
Portugal	3,9	3,1	4,0
RU	5,9	5,4	5,1
Etats-Unis	5,0	4,8	4,5
Japon	3,3	2,8	3,0

Dans la CE, à la fin de 1991, c'est au Danemark que l'on trouvait les rendements réels d'obligations d'Etat les plus élevés et aux Pays-Bas, les plus bas. Le Danemark détient le plus faible taux d'inflation de la CE, mais ses rendements obligataires sont toujours relativement élevés, et par conséquent, le niveau des rendements réels est élevé bien que ceux-ci aient chuté au cours des derniers mois à la suite des baisses dans les rendements obligataires. D'autre part, les Pays-Bas ont des rendements obligataires nominaux aux environs des mêmes niveaux que ceux du Danemark, mais l'inflation y est plus vigoureuse, et par conséquent, les rendements réels sont inférieurs.

La plus forte hausse des rendements réels en 1991 a eu lieu au RU, passant de 1,2 % en janvier 1991 à 5,1 % en décembre. Ceci est le résultat de fortes baisses de l'inflation qui ne se sont accompagnées que de légers fléchissements des rendements nominaux.

MASSE MONETAIRE: La croissance monétaire en Allemagne supérieure à la fourchette fixée

La croissance de M3 en Allemagne a dépassé la fourchette fixée (3-5 %) en novembre 1991 en progressant à un taux annualisé de 5,7 %. Le rythme de croissance monétaire s'est accéléré au cours des trois mois septembre-octobre-novembre en raison d'une demande vigoureuse de liquidités et d'une forte croissance du crédit. La Bundesbank a effectué son dernier relèvement des taux d'intérêt à court terme à la mi-décembre.

Contrairement à la situation en Allemagne, la croissance monétaire demeure toujours extrêmement lente aux EU, Japon, France et RU; en France, le taux de croissance annualisé de M2 des trois mois septembre-octobre-novembre était négatif. Cependant, la variable dans le collimateur de la Banque de France est M3 qui s'est accrue au rythme annualisé de 5,2 % en novembre, venant de 4,7 % en octobre, soit une fourchette de 4-6 %.

RESERVES OFFICIELLES SUR L'ETRANGER: Chute des réserves en décembre

Les réserves officielles de change ont chuté en décembre dans tous les pays pour lesquels des données sont disponibles. Dans la plupart des cas, les chutes ont été assez fortes: 13 % pour l'Italie, 8 % pour la Grèce, 7 % pour le Japon et 6 % pour les EU. Pour décembre, il n'y a pas encore de données disponibles pour tous les pays CE, mais sur la base des indications fournies, il semble que les réserves d'EUR 12 seront inférieures à la fin de 1991 à ce qu'elles étaient à la fin de 1990.

COMPTES TRIMESTRIELS : Au cours du troisième trimestre 1991 : nouveau ralentissement de l'économie communautaire (PIB +0,3 %), accompagné par une sensible baisse de l'inflation (+0,9 %)

Après la légère reprise enregistrée au cours du deuxième trimestre, le troisième trimestre 1991 a été caractérisé, pour l'économie communautaire dans son ensemble, par un nouveau fléchissement du rythme de croissance de la production (PIB +0,3 %). Ce nouveau fléchissement, tout à fait cohérent avec le plus important indicateur économique, conduit à une nouvelle révision à la baisse des prévisions relatives à la croissance économique au cours de l'année 1991. Les raisons de la persistance de la phase de stagnation peuvent être synthétisées par trois éléments qui interagissent entre eux : tout d'abord la crise interne de l'économie américaine; en deuxième lieu la politique commerciale japonaise, enfin, le problème qui caractérise l'économie allemande après l'unification. En l'état actuel des choses une inversion des tendances de l'économie semble être possible à partir de cette année, mais les conjonctures mêmes préferent ne pas se prononcer à propos de la portée de cette reprise en liant ceci à beaucoup de facteurs dont un des plus importants semble être la politique monétaire adoptée par les Etats membres.

En ce qui concerne l'inflation mesurée par le déflateur implicite du PIB, nous ne disposons que des données relatives aux quatre grands pays. Sur cette base on constate un sensible ralentissement de la croissance des prix tant en rythme annuel que trimestriel (+0,9 %, +5,0 % respectivement). Ce résultat est particulièrement significatif parce que pour la première fois depuis le troisième trimestre 1989, l'inflation reste en-dessous de 1 % par trimestre. Ce résultat confirme, même en perspective, la validité de la politique monétaire restrictive adoptée dans la plupart des Etats membres et qui a été caractérisé par les hausses des taux d'intérêt intervenues au cours du mois d'août et plus récemment avant la fin de décembre.

En ce qui concerne les composantes du PIB, on observe le ralentissement des investissements (+0,5 %) accompagné par une légère reprise de la consommation publique (+0,5 %), tandis que pour la consommation privée on observe la poursuite de la phase de stagnation (+0,1 %).

En ce qui concerne la situation dans les Etats membres, on constate une évolution du PIB assez positive en France et surtout aux Pays-Bas (+0,7 % et 1,6 % respectivement) tandis qu'en Italie, Danemark et surtout en R.F. d'Allemagne on observe un ralentissement (+0,1 %). Au Royaume-Uni, après quatre trimestres de fléchissement, la production marque une faible reprise (+0,1 %). Du côté de l'inflation, on remarque un ralentissement généralisé, mais celle-ci reste toujours élevée surtout en Italie en R.F. d'Allemagne et au Royaume-Uni (+1,2 %, 1,2 % et 1,0 % respectivement). Par ailleurs, aux Pays-Bas, après le fléchissement enregistré au cours du deuxième trimestre, on observe une reprise même si faible (+0,3 %). Parmi les composantes du PIB, on constate un léger ralentissement des investissements qui restent quand même élevés en Italie en R.F. d'Allemagne et aux Pays-Bas (+1,6 %, +1,5 %, 2,6 % respectivement). Par contre, en France et surtout au Danemark on constate une reprise (+0,1 % et +1,7 % respectivement). Tandis qu'au Royaume-Uni la phase de récession commencée il y a un an et demi, continue (-,5 %). L'évolution de la demande interne qui est plus prononcée que celle de la production a déterminé une détérioration généralisée du solde extérieur au cours de ce trimestre dans les quatre grands pays.

Aux Etats-Unis, après trois trimestres de fléchissement, on constate une légère reprise de la production (+0,6 %) accompagnée par une sensible réduction de l'inflation tant trimestrielle qu'annuelle (+0,5 % et +3,5 % respectivement). Parmi les composantes du PIB, le fait marquant de ce trimestre est une légère reprise des investissements qui intervient après deux trimestres de nette baisse.

Pour le Japon on observe un nouveau ralentissement de l'économie (+0,4 %) accompagné par une légère déflation (-0,2 %). Parmi les composantes de la demande, il faut souligner le très net fléchissement de la consommation publique (-1,4 %), accompagné par un ralentissement de la consommation privée (+0,8 %). Par contre, les investissements, après deux trimestres de fléchissement, présentent une faible reprise (+0,1 %).

PRIX : L'inflation annuelle de la CE en janvier 1992 est de 4,7 %.

Le taux d'inflation sur 12 mois pour l'ensemble de la CE est tombé de 4,8 % en décembre 1991 à 4,7 % en janvier 1992. Il y a un an ce taux était de 5,6 %.

Entre décembre 1991 et janvier 1992 l'IPC pour l'ensemble de la Communauté a augmenté de 0,5 %.

Cette augmentation est due en premier lieu à une hausse sensible de l'indice de l'Espagne (+1,5 %), causé par une forte croissance des prix pour les produits alimentaires, le transport et les frais médicaux ainsi qu'à des hausses importantes des indices du Portugal (+0,9 %) et de l'Italie (+0,8 %).

Des hausses ont été enregistrées également en Allemagne, en France (*) et au Luxembourg (tous 0,4 %), en Belgique (+0,3 %) et en Grèce (+0,1 %).

Il y avait une baisse dans les IPC des Pays-Bas (-0,3 %), le Danemark (-0,2 %) et le Royaume-Uni (-0,1 %). Le recul des indices de ces 3 Etats Membres ont été principalement causé par l'effet des soldes d'hiver de l'habillement, des chaussures et des biens des ménages.

Actuellement les taux d'inflation sont inférieurs à la moyenne communautaire de 4,7 % dans 8 des 12 Etats Membres.

Dans l'ordre croissant de l'inflation actuelle les taux par pays sont les suivants:

	JAN 92	JAN 91	JAN 92	JAN 91	
	JAN 91	JAN 90	JAN 91	JAN 90	
Danemark	2,1 %	2,5 %	Pays-Bas	4,1 %	3,4 %
Belgique	2,3 %	3,9 %	Royaume Uni	4,1 %	9,0 %
Luxembourg	2,9 %	3,0 %	Espagne	5,9 %	6,8 %
France*	3,0 %	3,5 %	Italie	6,3 %	6,3 %
Irlande**	3,6 %	2,7 %	Portugal	8,6 %	13,0 %
Allemagne***	4,0 %	2,8 %	Grèce	18,1 %	21,7 %

* Estimation Eurostat

** Novembre par rapport à Novembre

*** l'IPC pour la R.F. d'Allemagne continue à refléter la situation territoriale avant le 3 octobre 1990.

Les chiffres ci-dessus montrent la décélération de l'inflation par rapport à la situation d'il y a un an dans tous les Etats Membres, exceptés l'Allemagne, les Pays-Bas, l'Irlande et l'Italie. La même évolution peut être observée aux Etats-Unis (2,6 % contre 5,7 %) et au Japon (2,0 % contre 4,0 %).

LE CHOMAGE DANS LA COMMUNAUTÉ

Eurostat estime le taux de chômage dans la Communauté européenne à 9,2 % au mois de décembre 1991, au même niveau que le mois précédent. Ce taux est estimé après correction des variations saisonnières et des différences dans les méthodes nationales de recensement du chômage.

En 1991, le nombre de chômeurs dans la Communauté, établi selon la définition du Bureau International du Travail, dépasse légèrement 13 millions tandis que plus de 15 millions de personnes sont inscrites dans les bureaux de placement des douze Etats Membres.

En un an, le chômage a augmenté de 880 000 personnes (+7,3 %) dont 770 000 au seul Royaume-Uni (+36 %). La croissance du chômage a dépassé 10 % au Luxembourg et en Irlande, et s'est située entre 6 et 9 % en Belgique, en Italie, en France et au Danemark. Par contre, le chômage a baissé de 7 % aux Pays-Bas, de 10 % dans la partie occidentale de la République fédérale d'Allemagne et de 14 % au Portugal.

L'augmentation du chômage a été plus marquée chez les hommes (+11,1 %) que chez les femmes (+3,9 %), chez les personnes âgées de 25 ans et plus (+8,3 %) que chez les jeunes (+5,3 %). La part des femmes dans le chômage revient à 51 % en 1991 contre 53 % en 1990.

Le taux de chômage dans la Communauté européenne est estimé à 8,9 % en 1991, en hausse de 0,6 points de pourcentage par rapport à 1990. Il est de 6,7 % aux Etats-Unis et de 2,1 % au Japon.

Cinq pays, la Belgique, le Danemark, le Royaume-Uni, la France et l'Italie ont un taux de chômage compris entre 8 et 10,5 %, tandis que le taux se situe à 7 % en Grèce et aux Pays-Bas, autour de 4 % en République fédérale d'Allemagne (partie occidentale) et au Portugal. 2 % de la population active sont en chômage au Luxembourg contre 16 % environ en Espagne et en Irlande.

PRODUCTION INDUSTRIELLE: L'évolution industrielle manque d'élan

La production industrielle de la Communauté européenne (EUR 12) n'a, de nouveau, donné aucun signe de reprise et la situation n'était guère différente d'une branche de l'industrie à l'autre. Pour novembre, l'indice de production corrigé des jours ouvrables est actuellement estimé à 123,7 (1985=100) pour EUR 12. Cela correspond à un taux annuel de croissance de l'indice de 0,4 % par rapport à novembre 1990. Après correction des variations saisonnières, l'indice estimé s'élève à 114,6 en novembre 1991 contre 114,3 le mois précédent. Par rapport à la valeur cumulée des mois de juin, juillet et août, la production EUR 12 corrigée des variations saisonnières a baissé de 0,2 % au cours des trois derniers mois, septembre, octobre et novembre. Les différentes catégories de biens accusent les taux de croissance suivants: industrie des matières premières: 0,1 %, industrie des biens d'investissement: -1,2 % et industrie des biens de consommation: 0,3 %. La stagnation de la production industrielle se poursuit donc.

Aux Etats-Unis, la production industrielle a stagné à +0,5 % (taux de croissance des trois derniers mois par rapport aux trois mois précédents); au Japon, on observe également une stagnation de la production industrielle (0,0 % du taux de croissance correspondant).

En ce qui concerne les taux de croissance des données corrigées des variations saisonnières des trois derniers mois par rapport aux trois mois précédents, on constate certes des différences entre les évolutions de l'indice de la production de l'ensemble de l'industrie dans les différents Etats membres de la Communauté européenne, mais la tendance générale est également à la stagnation (entre parenthèses chiffres de l'industrie des biens d'investissement): Irlande 5,0 % (6,0 %), France 0,5 % (-0,4 %), Espagne 0,1 % (0,4 %), Royaume-Uni -0,4 % (-0,9 %), Italie 0,7 % (-2,8 %), Allemagne -0,8 % (-1,1 %), Danemark -1,0 % (-0,7 %), Pays-Bas -2,6 % (-2,2 %).

Si l'on fait une estimation des chiffres qui manquent encore pour le mois de décembre 1991 pour les différents Etats membres (et, au besoin, également pour le mois de novembre), on obtient, pour l'industrie de production (NACE 1-4), les taux annuels de croissance suivants pour 1991 par rapport à 1990: EUR 12: -0,1 %, USA: -2,0 %, Japon: +2,5 %, Irlande: +3,3 %, Allemagne: +3,2 %, Pays-Bas +2,5 %, Danemark: +2,1 %, France: +0,4 %, Espagne: -1,0 %, Italie: -1,6 %, Royaume-Uni: -3,0 %.

BALANCE DES PAIEMENTS

Balance des paiements. Troisième trimestre 1991. Le déficit des paiements courants communautaires se dégrade de près de 13 milliards d'écus par rapport au troisième trimestre 90. Les soldes courants américains et japonais s'améliorent.

Les chiffres actuellement disponibles, montrent une nette tendance à la dégradation de la balance courante communautaire. Sur les trois premiers trimestres de l'année, le déficit atteindrait près de 40 milliards d'écus, sur la même période en 90, il atteignait seulement 8 milliards. Cette dégradation s'explique essentiellement par la contraction de l'excédent commercial allemand qui atteint 10,5 milliards d'écus sur les trois premiers trimestres de 91 à comparer à 48 milliards sur la même période en 90.

Sur les trois premiers trimestres de 91, le solde courant américain a connu une rapide amélioration, il est passé d'un déficit cumulé de 55,4 Milliards d'écus en 90 à un excédent de 2,2 milliards. Le versement des contributions des partenaires de la coalition au financement de la guerre du Golfe a gonflé le solde des invisibles américains au cours des deux premiers trimestres de 1992: on constate un surcroît de revenu de près de 32 milliards par rapport à la même période de 90. Toutefois, ce mouvement se ralentit et l'amélioration est moins forte sur le troisième trimestre 91.

L'excédent japonais des paiements courants atteint 40 milliards d'écus sur les trois premiers trimestres de 91, à comparer à 22,5 milliards en 90. La balance commerciale japonaise, est en forte progression, surtout au troisième trimestre où elle s'améliore de 10 milliards d'écus par rapport à l'année précédente.

Au troisième trimestre 91, par rapport au troisième trimestre 90, la France et le Royaume-Uni connaissent une très sensible amélioration de leur balance courante, essentiellement du fait du commerce de marchandises. L'Espagne et le Danemark, voient leur déficit courant se réduire de façon plus modeste. Les Pays-Bas et surtout l'Italie connaissent une assez nette détérioration de leur balance courante, en raison du commerce de marchandise pour l'Italie et des échanges d'invisibles pour les Pays-Bas.

COMMERCE EXTERIEUR

Le solde du commerce extérieur extra-communautaire s'établit à -4,6 Mds en octobre 1991, en légère amélioration (de 0,6 Md) par rapport à octobre 1990, ce déficit est moins lourd que la moyenne observée au troisième trimestre 1991. La réduction de l'excédent extra-communautaire allemand par rapport à octobre 1990 est plus que compensée par l'amélioration des soldes des échanges extra-communautaires de la France, de l'Italie, de l'UEBL et de l'Espagne. Les taux d'évolution des importations et des exportations par rapport à octobre 1990 sont distants de 1,8 point seulement. Les exportations progressent plus vite que les importations (+3 % contre +1,2 %). La chute du coût d'approvisionnement de la Communauté en pétrole brut entre ces deux périodes allège les importations en valeur d'énergie. Ce coût plafonne en octobre 1990 à 36 \$ le baril, et revient à un niveau proche de 20 \$ en octobre 1991, cette baisse atténuée en partie par la hausse du dollar entre ces deux périodes (+11,6 %) reste considérable.

Le déficit des échanges commerciaux des Etats-Unis atteint en octobre 1991 -9 Mds d'écus, soit une amélioration de 1,3 Md par rapport à octobre 1990. Les importations sont en augmentation de 9,6 % en écus entre octobre 1990 et 1991, mais cette hausse traduit plutôt celle du dollar par rapport à l'écu, en effet la progression en dollar est de 2 % seulement. L'évolution des exportations, plus soutenue que celle des importations est de 18,7 % en écus, soit 7 % en dollars.

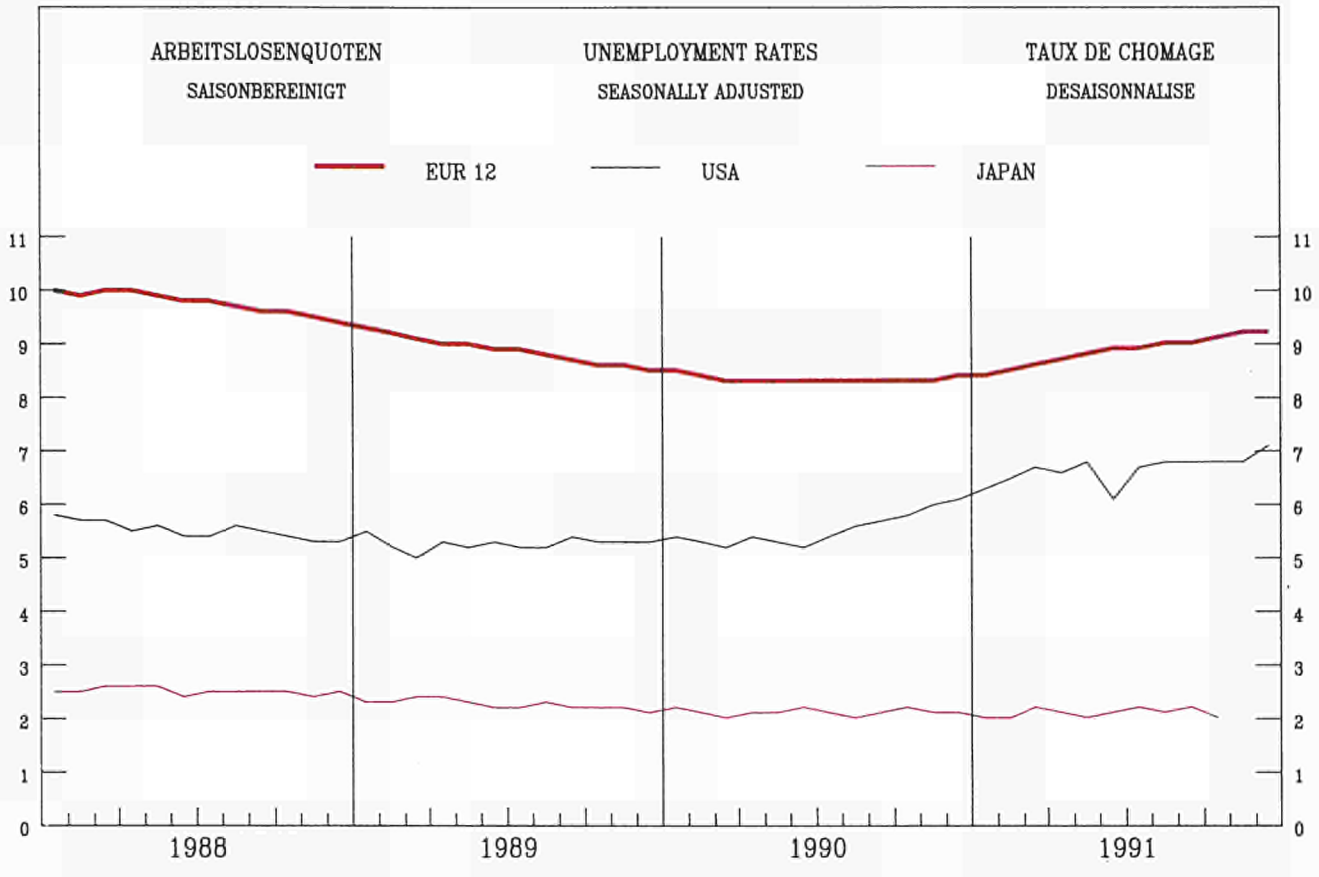

L'excédent japonais d'octobre 1991 reste élevé avec 5,3 Mds d'écus, dans la tendance du troisième trimestre 1991. Les importations du Japon stagnent en écus par rapport à octobre 1990, ce qui correspond à une chute de l'ordre de 11 % tant en yens qu'en dollars. Les exportations sont en ferme progression: +18,1 % en écus, soit près de 7 % en yens et en dollars.

L'excédent allemand se rétracte de 3 Mds d'écus par rapport à octobre 1990. Ce recul affecte autant le commerce intra que les échanges extra. Le solde de l'Allemagne reste néanmoins le plus élevé des pays membres. Plus proches de l'équilibre on trouve les soldes du Danemark, de la France, de l'UEBL, des Pays-Bas. La France améliore son solde de 1,6 Md, tant sur le plan du commerce extra qu'intra. La Grèce, le Portugal, l'Italie ont des déficits proches de -1 Md. Leur situation paraît stationnaire par rapport à octobre 1990. L'Espagne et le Royaume Uni ont des soldes négatifs avoisinant -2 Mds. Le Royaume Uni a rééquilibré ses échanges intra, mais enregistre le solde extra le plus déficitaire.

„On line“-Abfrage

Eurostatistik beinhaltet zwei verschiedene Tabellentypen:

1. Variablen tabellen – 1 Variable pro Tabelle
2. Ländertabellen – ungefähr 30 Variable pro Land

Jede Zeitreihe ist durch einen neunstelligen numerischen Kode gekennzeichnet, der seinerseits in Unterkodes gegliedert ist, welche – im Falle von „Eurostatistik“ – das Land, den Sektor, die Tabelle, die Einheit und die Periodizität bezeichnen.

Die Bedeutung der einzelnen Unterkodes ist der nachstehend aufgeführten Tabelle zu entnehmen.

Land XX	Sektor XX	Tabelle XXXX	Periodizität und Einheit X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A. Variablen tabellen XXXX vierstelliger Wert, der im Titel jeder Tabelle erscheint B. Ländertabellen 00XX vor dem Titel jeder Variable (siehe Liste auf der nächsten Seite)	0 jährlich, Angaben in Prozent 1 vierteljährlich, Angaben in Prozent 2 monatlich, Angaben in Prozent 3 jährlich, Indexangaben (1985 = 100) 4 vierteljährlich, Indexangaben (1985 = 100) 5 monatlich, Indexangaben (1985 = 100) 6 jährlich, Angaben in absoluten Werten 7 vierteljährlich, Angaben in absoluten Werten 8 monatlich, Angaben in absoluten Werten 9 Gewicht, EUR 10 = 100 bzw. EUR 12 = 100 (nicht vorhanden für die Ländertabellen)

Beispiele:

1. *Variablen tabelle*: Will man die monatliche Arbeitslosigkeit (in absoluten Zahlen) von Deutschland gemäß Tabelle 0304 dieser Veröffentlichung erfahren, so braucht man nur den Kode 12 93 0304 8 einzugeben.
2. *Ländertabelle*: Will man den Preisindex von Frankreich auf der Basis 1980 = 100 gemäß der Tabelle „Frankreich“ dieser Veröffentlichung erfahren, so braucht man nur den Kode 14 93 0031 3 (jährliche Angaben) oder 14 93 0031 5 (monatliche Angaben) einzugeben.

‘On-line’ consultation

Eurostatistics consists of two types of tables:

1. Table by indicators – 1 indicator by table;
2. Table by country including approximately 30 indicators by country.

Each time series is identified by a nine-digit code broken down into subcodes, which in the case of Eurostatistics, represent the country, sector, table, unit and periodicity.

The significance of the different subcodes may be found in the table below.

Country XX	Sector XX	Table XXXX	Periodicity and unit X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A. Table by indicator XXXX 4-digit value quoted in the title of each table B. Table by country 00XX before each indicator (see following page)	0 annual in % 1 quarterly in % 2 monthly in % 3 annual index 1985 = 100 4 quarterly index 1985 = 100 5 monthly index 1985 = 100 6 annual absolute value 7 quarterly absolute value 8 monthly absolute value 9 weighting EUR 10 = 100 or EUR 12 = 100 (does not exist for tables by country)

Consultation example:

1. *Table by indicator*: to know the monthly unemployment (absolute figures) of Germany as is shown in Table 0304 of this publication, the code 12 93 0304 8 should be formed.
2. *Table by country*: to know the price index, 1980 = 100 for France as shown in the France table of this publication, the code 14 93 0031 3 should be formed for annual figures and 14 93 0031 5 for monthly figures.

Mode de consultation «on-line»

Eurostatistiques comprend deux types de tableaux:

- 1) tableaux par variable – 1 variable par tableau;
- 2) tableaux par pays comprenant environ 30 variables par pays.

Chaque série chronologique est identifiée par un code à neuf chiffres structuré en sous-codes représentant, dans le cas d'*Eurostatistiques*, le pays, le secteur, le tableau, l'unité et la périodicité.

On trouvera dans le tableau ci-dessous la signification des différents sous-codes.

Pays XX	Secteur XX	Tableau XXXX	Périodicité et unité X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A – Tableaux par variable XXXX valeur à 4 chiffres figurant dans le titre de chaque tableau B – Tableaux par pays 00XX devant le titre de chaque variable (voir liste page suivante)	0 annuelle exprimée en pourcentage 1 trimestrielle exprimée en pourcentage 2 mensuelle exprimée en pourcentage 3 annuelle exprimée en indice 1985 = 100 4 trimestrielle exprimée en indice 1985 = 100 5 mensuelle exprimée en indice 1985 = 100 6 annuelle exprimée en valeur absolue 7 trimestrielle exprimée en valeur absolue 8 mensuelle exprimée en valeur absolue 9 pondération EUR 10 = 100 ou EUR 12 = 100 (inexistant pour les tableaux par pays)

Exemple de consultation:

- 1) *tableau par variable*: pour connaître le chômage mensuel (chiffres absolus) de la RF d'Allemagne, tel qu'il figure au tableau 0304 de cette publication, il suffit d'appeler le code 12 93 0304 8;
- 2) *tableau par pays*: pour connaître l'indice des prix 1980 = 100 de la France tel qu'il figure au tableau «France» de cette publication, il suffit d'appeler le code 14 93 0031 3 (annuel), 14 93 0031 5 (mensuel).
