Mit der monatlich erscheinenden Veröffentlichung „Eurostatistik“ – Daten zur Konjunkturanalyse werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR 12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

„Eurostatistik“ enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Die Reihen werden jeweils für die letzten 15 Monate, die letzten fünf Quartale und die letzten vier Jahre veröffentlicht, um eine kurz- oder mittelfristige Analyse – gegebenenfalls mit überarbeiteten Zahlen – zu ermöglichen.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung. Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

„Eurostatistik“ besteht aus drei Teilen:

- Die Rubrik „kurz notiert“ gibt die wichtigsten Ereignisse und Entwicklungen der jüngsten Zeit im wirtschaftlichen, finanziellen und sozialen Bereich wieder.
- Im Schaubilderteil werden die wichtigsten Reihen über die wirtschaftliche Entwicklung in der Gemeinschaft, den Mitgliedstaaten, den Vereinigten Staaten und Japan veranschaulicht.
- Im Konjunkturdatenteil werden die Daten, die von Eurostat auf der Grundlage gemeinsamer Kriterien harmonisiert wurden, für sämtliche Mitgliedstaaten dargestellt und mit den Daten der Vereinigten Staaten und Japans verglichen.

Die in „Eurostatistik“ veröffentlichten Daten stammen aus dem „ICG“-Bereich der On-line-Datenbank „Cronos“ von Eurostat.

Wer Zugang zu Cronos besitzt, kann jederzeit die Tabellen dieser Veröffentlichung abfragen, wobei die Daten täglich auf den neuesten Stand gebracht werden. Hinweise zur „on-line“-Benutzung finden sich auf der letzten Seite.

Weitere Informationen über „Eurostatistik“ können bei folgender Stelle angefordert werden:

SITC	Standard International Trade Classification

Soweit nicht anders angegeben, beziehen sich die Angaben auf den Gebietsstand der Bundesrepublik Deutschland vor dem 03.10.1990; sie schließen Berlin (West) ein.

WECHSELKURSE: Dollar weiter steigend

Trotz des Zinsgefälles zwischen Dollar und europäischen Währungen ist der Wert des Dollar im Februar und Anfang März weiter gestiegen. Gegenüber der D-Mark betrug die Steigerung im Februar 1,8 % und insgesamt seit Jahresbeginn mehr als 9 %, so daß nunmehr wieder ungefähr der Stand von Oktober 1991 erreicht ist. Auch gegenüber dem japanischen Yen wertete der Dollar weiterhin auf, und zwar im Februar um etwa 2 % und in den ersten drei Märzwochen um weitere 3,5 %. Der Yen zeigt sich derzeit eher schwach, was darauf zurückzuführen ist, daß Zweifel an der Stärke der japanischen Wirtschaft aufgekommen sind. Außerdem ist am 16. März der Nikkei-Index um 3 % gesunken und hat damit seinen niedrigsten Stand seit 5 Jahren erreicht. Er liegt nunmehr bei nur 49 % des im Jahre 1989 erreichten Spitzenwertes. Diese Faktoren haben zusammen mit dem geringen Geldmengenwachstum, zu dem später noch Stellung genommen werden wird, den Ruf nach einer Senkung des amtlichen japanischen Diskontsatzes laut werden lassen, der derzeit bei 4,5 % liegt, nachdem er Ende Dezember um einen halben Prozentpunkt gesenkt wurde. Die spanische Peseta ist (am 23. März) weiterhin die stärkste Währung im Wechselkursmechanismus des EWS, gefolgt vom belgischen Franken, der sich im letzten Monat im Paritätenraster nach oben bewegt hat. Das Pfund Sterling bleibt die schwächste Währung, gefolgt mit einigem Abstand von der dänischen Krone. Von allen am Wechselkursmechanismus beteiligten Währungen geriet die Peseta im Februar am stärksten in Bewegung; ihr Wert stieg gegenüber dem Ecu um 0,6 % und in den ersten beiden Monaten des Jahres um insgesamt 1,2 %. Das Pfund Sterling verzeichnete im Februar, wie an dieser Stelle bereits im letzten Monat berichtet, ebenfalls eine Wertsteigerung, wurde jedoch in den ersten drei Wochen des Monats März bereits wieder schwächer, was zum Teil auf den ungewissen Ausgang der allgemeinen Wahlen im VK am 9. April zurückzuführen ist.

RENDITEN VON STAATSANLEIHEN: ANSTIEG IN DEN VEREINIGTEN STAATEN

Im Februar stiegen die Renditen für US Treasury Bonds um 0,3 % auf 7,8 %. Es war dies die erste Erhöhung seit sieben Monaten, und sie bedeutet, daß die Zinsertragskurve in den USA jetzt steiler verläuft als bisher, da die langfristigen Zinssätze zur Zeit zwischen 3 und 4 Prozentpunkten über den kurzfristigen Sätzen liegen, eine ziemlich große Differenz im Vergleich zu früheren Jahren. In der Europäischen Gemeinschaft gingen die Renditen für Staatsanleihen im Februar entweder zurück oder blieben konstant. Italien und Spanien hatten (mit 0,4 % bzw. 0,3 %) den stärksten Rückgang zu verzeichnen, während die Renditen in Deutschland und Frankreich unverändert blieben. Der Rückgang der Renditen in Spanien folgte auf die leichte Senkung (1/4 %) der spanischen kurzfristigen Zinssätze am 25. Februar; der Interventionskurs der Banco de Espana liegt nunmehr bei 12,4 %.

GELDVOLUMEN: 1991 3 % M2-WACHSTUM IN DEN USA

1991 lag die M2-Zuwachsrate in den Vereinigten Staaten bei knapp 3 % gegenüber 3,3 % im Jahre 1990. Verglichen mit den letzten Jahren hat sich das M2-Wachstum in den vergangenen Monaten verlangsamt, und das geringe Wachstum verstärkt die Beunruhigung über das Ausmaß der Rezession in den USA. Dasselbe gilt für Japan, wo die M2-Zuwachsrate in den 12 Monaten bis November 2,5 % betrug. Vor kurzem veröffentlichte vorläufige Zahlen weisen darauf hin, daß die Zuwachsrate für M2 zu Beginn des Jahres 1992 unter 2 % p.a. betrug. In Deutschland übersteigt das M3-Wachstum auf Jahresbasis gerechnet weiterhin die Zielmarke, die Zuwachsrate betrug im Dezember 6,3 %; nach vorläufigen Berechnungen dürften die Zuwachsraten im Januar und im Februar 1992 sogar noch höher liegen. Dieses beschleunigte Geldmengenwachstum scheint im Widerspruch zu der gegenwärtigen geringen Wirtschaftstätigkeit in Deutschland zu stehen.

AMTLICHE WÄHRUNGSRESERVEN: 1991 RESERVEN VON EUR12 LEICHT GESTIEGEN

Ende 1991 hatten sich die gesamten Währungsreserven der Europäischen Gemeinschaft gegenüber dem Vorjahr nur um reichlich 2 % erhöht. Den stärksten Zufluß an Währungsreserven hatten Spanien (11,4 Mio. ECU), das VK (4,9 Mio. ECU) und Portugal (2,6 Mio. ECU) zu verzeichnen, doch dem stand ein Abfluß aus Italien, Frankreich, Dänemark und Deutschland gegenüber. Das Ergebnis dieser Entwicklung ist, daß Spanien derzeit 20,6 % der Gesamtreserven von EUR12 hält, gefolgt von Deutschland (19,7 %) und Italien (15,2 %). Seit sich die Peseta im Juni 1989 dem Wechselkursmechanismus angeschlossen hat, haben die Währungsreserven Spaniens um fast 14 Mio. ECU zugenommen, und seitdem hielt sich die Peseta im Paritätenraster des Wechselkursmechanismus ganz oben oder zumindest am oberen Ende, so daß die Banco de Espana intervenieren mußte, um die Wertsteigerung der Peseta zu bremsen.

QUARTALSABSCHLUSS: Im dritten Quartal 1991 wiederum Abschwächung des Wirtschaftswachstums in der Gemeinschaft (BIP +0,2 %) bei starkem Inflationsrückgang (+0,9 %).

Nachdem die Wirtschaft der Gemeinschaft im zweiten Quartal wieder etwas Auftrieb bekommen hatte, war das dritte Quartal 1991 insgesamt durch eindeutiges Nachgeben des Produktionswachstums (BIP +0,2 %) gekennzeichnet. Diese Entwicklung steht zwar im Einklang mit dem wichtigsten Wirtschaftsindikator, führt aber zu einer erneuten Zurücknahme der Vorausschätzungen für das Wirtschaftswachstum des Jahres 1991. Für das Andauern dieser Stagnationsphase lassen sich drei Gründe anführen, wobei zu vermuten ist, daß sich die Ursachen gegenseitig bedingen: in allererster Linie kommt die binnenwirtschaftliche Krise der USA, in zweiter Linie die japanische Handelspolitik und schließlich noch die Probleme der deutschen Wirtschaft nach der Vereinigung. Angesichts der gegenwärtigen Lage ist eine Tendenzumkehr in der Wirtschaft ab diesem Jahr zwar möglich, aber die Konjunkturforscher ziehen es vor, keine allzu klaren Aussagen über den Wiederaufschwung zu machen, der von vielen Faktoren abhängig gemacht wird, zu deren wichtigsten die Währungspolitik der Mitgliedstaaten zu gehören scheint.

In Bezug auf die durch den impliziten BIP-Deflator gemessene Inflationsentwicklung stellt man sowohl bei der jährlichen als auch bei der vierteljährlichen Preisentwicklung (0,9 % bzw. 5,0 %) eine erhebliche Abschwächung fest. Die Entwicklung ist umso bedeutsamer, als der Inflationsanstieg im Quartalsverlauf seit dem dritten Quartal 1989 erstmals unter 1 % bleibt. Dadurch wird selbst in der Prognose die Richtigkeit der in den meisten Mitgliedstaaten praktizierten restriktiven Währungspolitik, die im August und kürzlich noch vor Ende Dezember zu einem Höhenflug der Zinssätze geführt haben, bestätigt. Was die BIP-Komponenten angeht, ist eine Schwächetendenz bei den Investitionen (+0,3 %) und ein leichtes Anziehen des Verbrauchs der öffentlichen Hand (+0,5 %) festzustellen, während der Privatverbrauch weiterhin stagniert (+0,0 %). Über die Lage in den Mitgliedstaaten liegen Angaben für Deutschland aus dem vierten Quartal vor. Diese Daten zeigen an, daß das Produktionsniveau weiterhin sinkt (BIP -0,3 %) und die Inflation sich immer noch auf hohem Niveau bewegt (1,3 %). Unter den BIP-Komponenten stach im vierten Quartal in Deutschland vor allem der starke Investitionsrückgang (-2,1 %) und ein starkes Wachstum des Verbrauchs der öffentlichen Hände (1,7 %) ins Auge. In den Vereinigten Staaten, für die Angaben nur aus dem vierten Quartal vorliegen, stellt man nach Revision des amerikanischen Quartalsabschlusses erneut eine Verlangsamung des Wirtschaftswachstums (+0,2 %) fest, zu der ein unverändertes inflationäres Quartalswachstum (0,5 %) kommt, während sich die Jahresinflation leicht abschwächte (+3,0 %). Unter den Komponenten der Inlandsnachfrage sticht vor allem die das Investitionswachstum gekennzeichnete Stagnationsphase hervor (0,1 %). Dabei darf nicht außer Acht gelassen werden, daß die Investitionen in den Vereinigten Staaten seit dem dritten Quartal 1990 kein Wachstum mehr aufweisen, wohingegen sowohl für den privaten als für den öffentlichen Verbrauch negative Wachstumsraten (-0,1 % bzw. -1,4 %) ausgewiesen werden. Die japanische Wirtschaft wächst bei leichter Deflationstendenz (-0,2 %) wiederum schwächer (+0,4 %). Bei den Nachfragekomponenten ist der sehr deutliche Rückgang des öffentlichen Verbrauchs (-1,4 %) bei gleichzeitiger Verlangsamung des Wachstums des privaten Verbrauchs (+0,8 %) hervorzuheben. Die Investitionen hingegen deuten nach zwei schwachen Quartalen hingegen wieder leicht nach oben (+0,1 %).

PREISE: Jährliche Inflationsrate der EG auch im Februar 1992 bei 4,7 %

Die über zwölf Monate berechnete Inflationsrate betrug für die gesamte Europäische Gemeinschaft im Februar 1992 4,7 % (Februar 1991: 5,5 %) und blieb damit seit vier Monaten fast unverändert. Zwischen Januar und Februar 1992 ist die Inflationsrate in Portugal um 1,3 %, in Spanien um 0,7 %, in Deutschland um 0,6 %, im Vereinigten Königreich und Dänemark um 0,5 %, in den Niederlanden um 0,4 % sowie in Belgien, Frankreich, Griechenland und Italien um 0,3 % gestiegen. Der Index für Luxemburg hat sich nicht verändert. In Irland stieg der Verbraucherpreisindex von Mitte November 1991 bis Mitte Februar 1992 um 0,8 %, was einer durchschnittlichen monatlichen Inflation von annähernd 0,3 % entspricht. Die folgende Tabelle gibt in steigender Reihenfolge die Inflationsraten für die zwölf Mitgliedstaaten an (Februar 1992 gegenüber Februar 1991 und Februar 1991 gegenüber Februar 1990):

	Feb.92 Feb.91	Feb.91 Feb.90	Feb.92 Feb.91	Feb.91 Feb.90
Belgien	2,3 %	4,0 %	Niederlande	4,3 %
Dänemark	2,3 %	2,6 %	BR Deutschland**	4,3 %*
Luxemburg	2,8 %	3,2 %	Italien	5,7 %*
Frankreich	3,0 %*	2,5 %	Spanien	6,7 %
Irland	3,7 %	2,5 %	Portugal	8,0 %
Vereinigtes Königreich	4,1 %	8,9 %	Griechenland	18,2 %
				21,8 %

* vorläufige Angaben
** Der Verbraucherpreisindex für die Bundesrepublik Deutschland bezieht sich weiterhin auf den Gebietsstand bis zum 3. Oktober 1990.

Obige Zahlen zeigen, daß die Inflationsrate in allen Mitgliedstaaten, mit Ausnahme von Deutschland, Frankreich, Spanien, den Niederlanden und Irland, im Vergleich zum Vorjahr gesunken ist. Auch die Zahlen für die USA (2,8 % gegenüber 5,3 %) und Japan (2,0 % gegenüber 3,6 %) weisen auf eine rückläufige Tendenz der Inflation hin.

INDUSTRIELLE PRODUKTION: Abschwung jetzt auch in Deutschland

Im Dezember 1991 zeigte die Industrieproduktion der Europäischen Gemeinschaft (EUR12) kein Anzeichen einer Erholung, im Gegenteil, auch in Deutschland (West), das als größtes Mitgliedland 28 Prozent der EG Produktion erstellt, setzte nun Stagnation ein. Der arbeitstäglich bereinigte Produktionsindex wird für Dezember für EUR12 derzeit auf 112,0 geschätzt (1985=100). Dies entspricht einer Wachstumsrate des Index gegenüber Dezember 1990 von -1,1 %. Nach Saisonbereinigung beträgt der geschätzte Index im Dezember 1991 112,9, im Vormonat war er bei 114,8. Verglichen mit dem kumulierten Wert des dritten Quartals stieg die saisonbereinigte EUR12 Produktion im vierten Quartal 1991 um 0,2 % (Investitionsgüterindustrie -1,1 %) für die einzelnen Mitgliedstaaten der EG betragen (soweit verfügbar) die entsprechenden Wachstumsraten des vierten Quartals 1991 gegenüber dem dritten Quartal: Niederlande 3,6 %, Irland 2,2 % (geschätzt), Frankreich 0,7 %, Italien 0,4 %, Luxemburg -0,1 % (geschätzt), Vereinigtes Königreich -0,2 %, Deutschland (West) -1,0 %, Dänemark -3,3 %. Die Stagnation der Industrieproduktion setzt sich somit fort. In den USA stagniert nach wie vor die Industrieproduktion bei -0,1 % (Wachstumsrate des vierten gegenüber dem dritten Quartal); in Japan ist mit -0,8 % ein Abschwung der Industrieproduktion zu beobachten. Die industriellen Erzeugerpreise steigen zur Zeit (Dezember 1991) in der Europäischen Gemeinschaft nur noch mit einer Jahresrate von 2,1 %. Dies ist weniger als zum gleichen Zeitraum ein Jahr zuvor. Etwasige Folgen des letzten Nahost-Krieges sind damit mittlerweile verebnet. Zur Zeit wird die Jahreswachstumsrate 1991 gegenüber 1990 für die Industrieproduktion (NACE 1-4) für die einzelnen Mitgliedstaaten und die EG wie folgt angegeben: EUR12:

-0,3 %, Irland +3,8 %, Niederlande +3,7 %, Deutschland +2,8 %, Dänemark +2,0 %, Luxemburg 0,4 %, Spanien -0,2 %, Frankreich -0,7 %, Italien -2,1 %, Vereinigtes Königreich -2,9 %.

Die Grafiken auf den Seiten 40 und 41 zeigen für die vier grossen Mitgliedsstaaten das differenzierte Bild der Wachstumsraten der Produktion 1991 in verschiedenen Industriebranchen. Dabei zeigt sich, dass in den einzelnen Ländern die Entwicklungen teilweise sehr unterschiedlich waren: Die Holzverarbeitende Industrie beispielsweise boomte in Deutschland, während im Vereinigten Königreich die Produktion deutlich sank. Ähnliches gilt für die Papierindustrie. Die chemische Industrie stagnierte dagegen in allen vier grossen EG Mitgliedsstaaten, während die Kunststoff- und Gummiindustrie in Deutschland und Frankreich eher positive Zuwachsraten zeigte. Besondere Zeichen eines Abschwungs sind für Italien und das Vereinigte Königreich im Bereich der Metallzeugnisse und des Maschinenbaus zu beobachten. Die Elektroindustrie und die Automobilbranche dagegen zeigen für alle Mitgliedsstaaten eher Abschwung bzw. Stagnation an. Dies gilt auch für die Textil- und die Schuhindustrie. Im Bekleidungssektor zeigt vor allem das Vereinigte Königreich starke Einbrüche in 1991.

Zahlungsbilanz

Im November belief sich das Defizit im außergemeinschaftlichen Handel auf 4,8 Milliarden Ecu. Es liegt damit unter dem Durchschnittswert der ersten 11 Monate 1991 (-6,4 Mrd.) und entspricht in etwa dem Außenhandelsaldo von November 1990 (-5,1 Mrd.). Der Saldo des außergemeinschaftlichen Handels im November 1991 unterscheidet sich kaum von dem Saldo desselben Vorjahresmonats, obwohl die Kosten für die Versorgung der Gemeinschaft mit Rohöl in Dollar um 37 % und in Ecu um 27 % gesunken sind. Diese Entwicklung wirkt sich auf die Einfuhren aus Drittländern aus, die gegenüber dem Stand von November 1990 stragnieren (0,2 %). Die Ausfuhren sind geringfügig gestiegen, und zwar um knapp 1 %.

Das Defizit der Vereinigten Staaten erreicht im November 1991 5 Milliarden Ecu und entspricht damit ungefähr dem Saldo des außergemeinschaftlichen Handels. Gegenüber November 1990 ist eine Verbesserung um fast 4 Milliarden eingetreten. Die Ausfuhren der Vereinigten Staaten haben gegenüber dem niedrigen Niveau von November 1990 gerechnet in Ecu um 22,5 % zugenommen, das entspricht 12,5 % in Dollar. Die Einfuhren sind in Ecu gerechnet um 4,7 % gestiegen, während sie in Dollar um 5, % gesunken sind. Es scheint, daß die Einfuhren weniger stark unter den politischen Spannungen am Golf gelitten haben als die Ausfuhren.

Der japanische Überschub erreicht im November 1991 fast 6 Milliarden Ecu und damit beinahe den Rekordsaldo vom September (6,3 Mrd. Ecu). Die japanischen Einfuhren sind gegenüber November 1990 gerechnet in Ecu um 6,2 % zurückgegangen, in Dollar und in Yen um fast 15 %. Die Steigerung der Ausfuhren erreicht in Ecu 12,7 %, in Dollar und in Yen mehr als 22 %. Diese Steigerung bedeutet gegenüber den Steigerungsraten von fast 20 % in Ecu in der Zeit von Juli bis Oktober eine Verlangsamung.

Im November 1991 verzeichnet Deutschland den höchsten Gesamtüberschub aller Mitgliedsstaaten. Er erreicht 1,6 Milliarden, einen Stand, der mit dem vom November 1990 vergleichbar ist. Für diesen Zeitraum wird der gesamte positive Saldo durch den außergemeinschaftlichen Handel verursacht, während im November 1991 eine Neuausrichtung auf den innergemeinschaftlichen Handel stattfindet, bei dem sich ein Saldo von einer halben Milliarde Ecu ergibt. Deutschland ist trotzdem das einzige Land der Gemeinschaft, das im November 1991 einen Überschub im Handel mit Drittländern zu verzeichnen hat.

Vergleicht man dabei den Monat November 1991 mit November 1990, d. h. Zeiträume, in denen das Territorium des Landes gleich groß war, so ist der Rückgang des Überschusses weniger deutlich als für die Monate vor Oktober. Die Verringerung des deutschen Handelsüberschusses mit Drittländern belastet die Gemeinschaftsergebnisse weniger als zu Beginn des Jahres. Die Niederlande verzeichnen ebenfalls einen Überschub von fast einer halben Milliarde. Die übrigen Länder melden Defizite: Die BLWU, Dänemark und Portugal -0,5 Milliarden, Italien -1,5 Milliarden. Italien bleibt weiter im Defizit, obwohl sich seine außergemeinschaftliche Handelsbilanz gegenüber November 1991 (um eine Milliarde) verbessert hat. Griechenland, das Vereinigte Königreich, Spanien und Frankreich liegen mit ihren Salden bei jeweils fast -2 Milliarden Ecu.

AUSSENHANDEL

Im Oktober 1991 betrug das Defizit im außergemeinschaftlichen Handel 4,6 Mrd. ECU. Es hat sich somit gegenüber Oktober 1990 um 0,6 Mrd. verbessert und lag noch unter dem Durchschnittswert für das dritte Quartal 1991. Der Rückgang des deutschen Überschusses aus dem Handel mit Drittländern im Vergleich zum Vorjahresmonat wurde durch die Verbesserung der Salden des außergemeinschaftlichen Handels Frankreichs, Italiens, der BLWU und Spaniens mehr als ausgeglichen. Die Steigerungsraten der Ein- und Ausfuhren unterschieden sich gegenüber Oktober 1990 nur um 1,8 Prozentpunkte, wobei die Ausfuhren schneller zunahm als die Einfuhren: 3 % gegenüber 1,2 %. Die Kosten für die Rohölversorgung der Gemeinschaft, die im Oktober 1990 einen Höchststand von 36 \$ je Barrel erreichten, sind im Oktober 1991 auf fast 20 \$ je Barrel gefallen und sorgten somit für eine wertmäßige Abnahme der Brennstoffeinfuhren. Dieser Rückgang wird zwar teilweise durch den Kursgewinn des Dollars von 11,6 % zwischen Oktober 1990 und Oktober 1991 abgeschwächt, bleibt aber dennoch bemerkenswert.

Das amerikanische Handelsbilanzdefizit belief sich im Oktober 1991 auf 9 Mrd. ECU, was einem Rückgang von 1,3 Mrd. gegenüber dem Vorjahresmonat entspricht. Die Einfuhren, ausgedrückt in Ecu, sind zwischen Oktober 1990 und Oktober 1991 um 9,6 % gestiegen, dies ist jedoch eher auf den Kursgewinn des Dollars gegenüber dem Ecu zurückzuführen; ausgedrückt in Dollar betrug das Wachstum der Importe nur 2 %. Die Ausfuhren, die stärker zunahm als die Einfuhren, verzeichneten, in Ecu gerechnet, Zuwachsraten von 18,7 % und, in Dollar gerechnet, von 7 %.

Die japanische Handelsbilanz bestätigte die im dritten Quartal 1991 zu beobachtende Entwicklung mit einem weiterhin hohen Überschub von 5,3 Mrd. ECU. Im Vergleich zum Oktober 1990 sind die Einfuhren, ausgedrückt in Ecu, stabil geblieben; ausgedrückt in Yen bzw. Dollar entspricht dies jedoch einem Rückgang von 11 %. Die Ausfuhren verzeichneten hohe Zuwachsraten: 18,1 % in Ecu, entsprechend fast 7 % in Yen und Dollar.

Der deutsche Handelsbilanzüberschub verringerte sich im Vergleich zum Oktober 1990 um 3 Mrd. ECU. Von diesem Rückgang ist sowohl der inner- als auch der außergemeinschaftliche Handel betroffen. Dennoch kann die Bundesrepublik Deutschland von allen Mitgliedsstaaten erneut den höchsten Überschub verzeichnen. Die Bilanzen Dänemarks, Frankreichs, der BLWU und der Niederlande sind ausgeglichener. Frankreich konnte seine Bilanz sowohl im inner- als auch im außergemeinschaftlichen Handel um 1,6 Mrd. verbessern. Die Bilanzen Griechenlands, Portugals und Italiens weisen Defizite von fast 1 Mrd. auf. Im Vergleich zu Oktober 1990 erscheint ihre Position unverändert. Spanien und das Vereinigte Königreich verzeichneten Defizite von fast 2 Mrd. ECU. Das Vereinigte Königreich weist eine ausgeglichene Bilanz des innergemeinschaftlichen Handels auf, verzeichnet jedoch auch das höchste Außenhandelsdefizit.

Eurostatistics – data for short-term economic analysis – is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR 12), each Member State, the United States and Japan.

Eurostatistics does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

The series are published for the last 15 months, the last five quarters and the last four years, thus permitting short- or medium-term analysis with figures that may have been revised where necessary.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

Eurostatistics comprises three sections:

- The 'In brief' section outlines the main recent events and trends in the economic, financial and social fields.
- The 'Graphs' section illustrates the most significant economic series for the Community, its Member States, the United States and Japan.
- The 'Short-term trends' section presents data harmonized by Eurostat on the basis of common criteria for the Member States as a whole, with comparisons with the USA and Japan.

The data published in *Eurostatistics* are taken from the ICG domain of Eurostat's on-line data bank, Cronos.

By linking up to Cronos it is possible to obtain daily the tables presented in this publication, containing data updated daily. The method of consultation can be found at the end of this publication.

Further information about *Eurostatistics* can be obtained from the following address:

SITC	Standard International Trade Classification

Unless otherwise stated, data for the Federal Republic of Germany, including West Berlin, as constituted prior to 3 October 1990.

EXCHANGE RATES: Dollar's appreciation continues

The dollar's appreciation continued in February and early March, despite the interest rate differential between it and European currencies. Against the Deutschmark it appreciated by 1.8% in February, and by over 9% since the start of the year, and is now back to around the levels at which it stood in October 1991.

The dollar also continued to appreciate against the Japanese yen, gaining around 2% in February, and a further 3.5% in the first three weeks of March. The yen is currently rather weak, due to fears of the lack of robustness of the Japanese economy. Furthermore, on March 16, the Nikkei share index fell by 3% to reach its lowest level for five years; it now stands at only 49% of its peak, which was reached in 1989. These factors, together with the low levels of monetary growth commented on later in this report, have led to calls for a cut in the Japanese official discount rate, which currently stands at 4.5%, having been reduced by half a percentage point in late December.

The Spanish peseta remains (March 23) the strongest currency in the Exchange Rate Mechanism (ERM) of the EMS, followed by the Belgian franc, which has moved up the grid in the last month. Sterling remains the weakest currency, with the Danish krona some distance above it.

The peseta experienced the greatest movement of any ERM currency in February: it appreciated 0.6% against the ecu, making a total of 1.2% in the first two months of the year. Sterling also appreciated in February, as commented on here last month, but in the first three weeks of March weakened again, partly due to uncertainty as to the outcome of the UK general election which will take place on April 9th.

GOVERNMENT BOND YIELDS: yields rise in United States

In February, the yield on US Treasury bonds rose by 0.3%, to stand at 7.8%. This increase was the first for 7 months, and means that the yield curve in the US is now more steeply sloped than previously, since long-term rates are currently between 3 and 4 percentage points above short-term rates, rather a large gap by historical standards.

In the European Community, government bond yields either fell or were constant in February. The largest falls were in Italy and Spain (0.4% and 0.3% respectively), whilst yields were unchanged in Germany and France. The fall in yields in Spain followed the slight (2%) fall in Spanish short-term interest rates on February 25; the Banco de España's intervention rate now stands at 12.4%.

MONEY SUPPLY: 3% M2 growth in the US in 1991

The growth of M2 in the United States in 1991 was just under 3%, down from 3.3% in 1990. The growth of M2 in the last few months has been slower than for some years, and its low growth continues to fuel worries about the depth of the US recession. The same is true of Japan, where the growth of M2 in the 12 months to November was 2.5%; recently released provisional data indicates that M2 growth at the start of 1992 was less than 2% per annum.

In Germany, annualised M3 growth continues to exceed its target range, growing by 6.3% in December; provisional data indicates even higher growth rates in January and February 1992. This acceleration in monetary growth appears to be inconsistent with the current low level of economic activity in Germany.

FOREIGN OFFICIAL RESERVES: EUR12's reserves increase slightly in 1991

The total foreign official reserves of the European Community were just over 2% higher at the end of 1991 than they were 12 months previously. The largest inflows of reserves were experienced by Spain (11.4 million ecus), the UK (4.9 million ecus) and Portugal (2.6 million ecus), but these inflows were offset by outflows from Italy, France, Denmark and Germany. The inflows mean that Spain currently holds 20.6% of the EUR12 total, followed by Germany (19.7%) and Italy (15.2%).

Since the peseta joined the ERM in June 1989, Spain has gained almost 14 million ecu of reserves, during which time the peseta has remained at or near the top of the ERM currency grid, and thus there has been intervention by the Banco de España in order to limit the peseta's appreciation.

QUARTERLY ACCOUNTS: Further slowdown in the Community's economy during the third quarter of 1991 (GDP +0.2%), with a significant drop in inflation (+0.9%)

Following the slight upturn in the second quarter, the third quarter of 1991 faced a renewed slowdown of growth in output for the Community as a whole (GDP +0.2%). This slowdown, which was fully in line with the most important economic indicator, prompted a new downwards revision of the forecasts for economic growth during 1991. The reasons for the continuing economic stagnation may be summed up by the following three interrelated factors: firstly the internal crisis in the American economy, secondly Japanese trade policy, and finally the problems facing the German economy following unification. Under present conditions a reversal of the economic trends would seem to be possible after this year, but even the economic analysts prefer not to commit themselves on the extent of the upturn, since they see it as linked to a number of factors, in particular the monetary policies of the Member States.

As regards inflation as measured by the implicit deflator of GDP, there was a noticeable slowdown in the rate of price increases, in both quarterly and annual terms (+0.9% and +5.0% respectively). This figure is particularly significant because, for the first time since the third quarter of 1989, inflation remained below 1% per quarter. This confirms, even with an eye to the future, the validity of the tight monetary policies followed by most of the Member States, which were reflected in rises in interest rates in August and, more recently, just before the end of December.

With regard to the components of GDP, there was a slowdown in investment (+0.3%) and a slight upturn in public consumption (+0.5%), whereas the stagnation in private consumption continued (+0.0%).

As regards the situation in the various Member States, data are available on the last quarter for Germany. These indicate a continuing slowdown in production (GDP -0.3%) and continuing high inflation (+1.3%). Of the components of GDP, the main feature of the last quarter was the sharp drop in investment (-2.1%) and a sharp increase in public consumption (+1.7%).

In the United States, for which data are available for the fourth quarter, the review of the American quarterly accounts showed a further slowdown in economic growth (+0.2%), accompanied by an unchanged rate of inflation in quarterly terms (+0.5%), although in annual terms there was a slight slowdown (+3.0%). Of the components of domestic demand, the main feature was the stagnation in investment (+0.1%). It should be noted that since the third quarter of 1990 there has not been an increase in investment in the United States. In addition, both private and public consumption fell (-0.1% and -1.4% respectively).

In Japan there was a further slowdown in the economy (+0.4%), accompanied by slight deflation (-0.2%). Among the components of demand there was a marked decrease in public consumption (-1.4%), accompanied by a slowdown in private consumption (+0.8%). On the other hand, following a downturn in the last two quarters, there was a slight rally in investment (+0.1%).

PRICES: EC annual inflation unchanged at 4.7% in February 1992

The inflation rate over the last 12 months for the EC as a whole stayed at 4.7% in February (February 1991: 5.5%), thus remaining practically at the same level for the fourth consecutive month.

On a monthly basis there were increases in the CPI of all the Member States except Luxembourg between January and February 1992: Portugal 1.3%, Spain 0.7%, Germany 0.6%, the United Kingdom and Denmark 0.5%, Netherlands 0.4%, Belgium, France, Greece and Italy (all 0.3%). The index for Luxembourg did not change from January to February.

The quarterly index for Ireland rose by 0.8% between mid-November 1991 and mid-February 1992, which corresponds to an average monthly inflation of about 0.3%.

In order of increasing current inflation the rates for the EC Member States are as follows: (February 1992 compared with February 1991 and February 1991 compared with February 1990)

	Feb.92 Feb.91	Feb.91 Feb.90		Feb.92 Feb.91	Feb.91 Feb.90
Belgium	2.3%	4.0%	Netherlands	4.3%	3.1%
Denmark	2.3%	2.6%	Germany*	4.3%p	2.7%
Luxembourg	2.8%	3.2%	Italy	5.7%p	6.4%
France	3.0%p	2.5%	Spain	6.7%	6.0%
Ireland	3.7%	2.5%	Portugal	8.0%	12.5%
United Kingdom	4.1%	8.9%	Greece	18.2%	21.8%

p = Provisional
* = The CPI for the Federal Republic of Germany continues to reflect the geographic borders prior to 3 October 1990.

The above figures show that inflation is lower than a year ago in all the EC countries except Germany, France, Spain, the Netherlands and Ireland.

The corresponding figures for the USA 2.8% (5.3%) and Japan 2.0% (3.6%) show also a tendency of decreasing inflation.

INDUSTRIAL PRODUCTION: Downturn in Germany too

In December 1991 industrial output in the European Community (EUR12) showed no sign of recovery; on the contrary, it stagnated even in Germany, which as the largest Member State accounts for 28% of EC output. The December production index for EUR12, adjusted for the number of working days, is currently estimated at 112.0 (1985 = 100). This represents a rate of increase of -1.1% compared with December 1990. After seasonal adjustment, the estimated index stood at 112.9 in December 1991, as against 114.8 in the previous month. Compared with the cumulative figure for the third quarter, seasonally adjusted EC output rose by only 0.2% (investment goods industry -1.1%) in the fourth quarter of 1991. The corresponding rates of increase (where available) for the individual Member States were as follows: Netherlands 3.6%, Ireland 2.2% (estimated), France 0.7%, Italy 0.4%, Luxembourg -0.1% (estimated), United Kingdom -0.2%, Germany -1.0%, Denmark -3.3%. Industrial output thus continues to stagnate.

In the USA industrial output is still stagnating at -0.1% (rate of increase for the fourth quarter compared with the third); in Japan it fell by 0.6%.

Industrial producer prices in the European Community are rising at present (December 1991) at an annual rate of only 2.1%, which is lower than in the same period of the previous year. Any effects of the recent Middle East war have thus abated in the meantime.

The annual rate of increase (1991 compared with 1990) in industrial output (NACE 1-4) for the individual Member States and the EC as a whole is currently as follows: EUR12: -0.3%, Ireland +3.8%, Netherlands +3.7%, Germany +2.8%, Denmark +2.0%, Luxembourg +0.4%, Spain -0.2%, France -0.7%, Italy -2.1%, United Kingdom -2.9%.

The graphs on pages 40 and 41 show the differing rates of increase in output in 1991 in various branches of industry for the four largest Member States. It is clear that in some cases the trends differed considerably in the individual countries: for example, the timber processing industry boomed in Germany, whereas output fell sharply in the United Kingdom. The same applies to the paper industry. On the other hand, the chemical industry stagnated in all four Member States, while the plastics and rubber industry in Germany and France showed rather positive growth rates. There were definite signs of a downturn in the metal products and mechanical engineering sectors in Italy and the United Kingdom. On the other hand, the electrical engineering and car industries showed a downturn or stagnation in all four Member States, as did the textile and footwear industries. The United Kingdom in particular showed clear signs of recession in the clothing industry in 1991.

Balance of payments

The Community's external trade deficit in November 1991 was ECU 4 800 million. This was better than the average over the eleven months of 1991 (ECU 6 400 million) and was about

the same as the deficit for November 1990 (ECU 5 100 million). The extra-Community trade balance for November 1991 was close to that of November 1990, despite a 37% reduction in the cost of Community crude oil supplies in dollar terms, which is reduced to 27% in ecu terms. This affected extra-Community imports, which remained at about the same level as November 1990 (0.2%). Exports rose slightly, by almost 1%.

The United States' deficit reached ECU 5 000 million in November 1991, which is close to the Community's external trade balance. It improved by almost ECU 4 000 million compared with November 1990. US exports rose by 22.5% in ecu terms compared with the low level of November 1990. This increase is reduced to 12.5% in dollar terms. Imports rose by 4.7% in ecu, but fell by 4.7% in dollar terms. Political tension in the Gulf seems to have had a more negative effect on exports than on imports.

The Japanese surplus for November 1991 approached ECU 6 000 million, which is close to the record level of September (ECU 6 300 million). Japanese imports fell by 6.2% in ecu terms compared with those of November 1990. In terms of the dollar or the yen this amounted to almost 15%. Exports rose by 12.7% in ecu terms, which was over 22% in terms of the dollar and the yen. This was not as sharp an increase as that observed between July and October, which was nearly 20% in ecu terms.

In November 1991 Germany's total trade surplus was the highest of all the Member States. It amounted to ECU 1 600 million, a level similar to that of November 1990. In November 1990 the whole of the positive balance was due to extra-Community trade, whereas in November 1991 there was a swing towards intra-Community trade, the balance of which amounted to ECU 500 million. Germany was nevertheless the only Community country to have an extra-Community trade surplus in November 1991. This trend is less marked if November 1991 is compared with November 1990, when the country's territory was identical, than with the months prior to October. This reduction in Germany's extra-Community surplus has a less negative effect on Community results than at the beginning of the year. The Netherlands also had a surplus approaching ECU 500 million. The other Member States recorded deficits: the BLEU, Denmark and Portugal had deficits of 500 million and Italy one of 1 500 million. Italy's deficit persisted despite a considerable improvement in its external trade balance (1 000 million) compared with November 1990. Greece, the United Kingdom, Spain and France each had a deficit of almost ECU 2 000 million.

EXTERNAL TRADE

The Community's external trade deficit in October 1991 was ECU 4 600 million, a slight improvement of ECU 600 million over October 1990 and below the average for the third quarter of 1991. The fall in the German surplus for extra-Community trade compared with October 1990 was more than offset by the improvement in the extra-Community trade balances of France, Italy, the BLEU and Spain. The difference in the rate of increase between imports and exports in relation to October 1991 was only 1.8 percentage points, with exports growing more quickly (+3% against +1.2%). The drop in the cost of the Community's crude oil supplies between the two periods reduced expenditure on energy imports. The price of a barrel of oil reached a high of \$36 in October 1990, but fell back to close to \$20 in October 1991. This represented a substantial fall, although it was partly offset by the rise in the dollar over the same period (+11.6%).

The United States' external trade deficit reached ECU 9 000 million in October 1991, an improvement of ECU 1 300 million compared with October 1990. Imports rose by 9.6% in ecu terms between October 1990 and October 1991, but this was more a reflection of the appreciation of the dollar against the ecu, and in dollar terms the increase was only 2%. Exports recorded a more sustained rise of 18.7% in ecu terms and 7% in dollar terms.

The Japanese surplus for October 1991 remained high at ECU 5 300 million, in keeping with the trend for the third quarter of 1991. Imports in ecu terms stagnated compared with October 1990, with a fall of the order of 11% in terms of both the yen and the dollar. Exports moved ahead strongly: +18.1% in ecus and almost 7% in yen and dollars.

Germany's trade surplus fell by ECU 3 000 million compared with October 1990, both intra- and extra-Community trade being affected. Nevertheless, Germany's surplus remained the highest among the Member States. Denmark, France, the BLEU and the Netherlands were closer to a balanced trade position. France showed an improvement of ECU 1 600 million, on both extra- and intra-Community trade. Greece, Portugal and Italy had deficits approaching ECU 1 000 million and their situation appeared unchanged compared with October 1990. Spain and the United Kingdom had deficits nearing ECU 2 000 million. The United Kingdom had restored a balance in its intra-Community trade, but had the highest deficit on extra-Community trade.

«Eurostatistiques – Données pour l'analyse de la conjoncture» est une publication mensuelle qui a comme but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR 12), pour les pays membres ainsi que pour leurs principaux partenaires extracommunautaires (États-Unis d'Amérique et Japon).

«Eurostatistiques» ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les importantes parmi celles-ci.

Afin de permettre des analyses diverses et, si nécessaire, à plus long terme, sont publiées généralement des données annuelles sur une période de quatre ans, des données trimestrielles pour les cinq derniers trimestres et des données mensuelles pour les quinze derniers mois disponibles.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, disponibles d'ailleurs dans les publications spécialisées d'Eurostat.

«Eurostatistiques» contient trois types d'informations, actualisés mensuellement:

- la rubrique «en bref» commente les principaux événements et tendances résultant des évaluations récentes;
- la partie «Graphiques» illustre les séries économiques les plus importantes pour la Communauté, les États membres, les États-Unis et le Japon;
- la partie «Données conjoncturelles» présente des données harmonisées par Eurostat sur la base des critères communs, pour l'ensemble des États membres et avec des comparaisons avec les États-Unis et le Japon;

Les données publiées dans «Eurostatistiques» proviennent du domaine «ICG» de la base de données Cronos.

En se connectant à Cronos, il est possible de suivre la mise à jour des tableaux de cette publication journalièrement en consultant les données en temps réel. Le mode de consultation «on line» se trouve à la fin de cette publication.

De plus amples informations concernant «Eurostatistiques» peuvent être obtenues à l'adresse suivante:

Sauf indications contraires, les données portent sur le territoire de la République fédérale d'Allemagne avant le 3.10.1990, Berlin-Ouest inclus.

TAUX DE CHANGE: poursuite de la hausse du dollar

Le dollar a poursuivi son mouvement de hausse en février et début mars, malgré son différentiel de taux d'intérêt avec les monnaies européennes. Par rapport au DM, il s'est apprécié de 1,8 % en février, soit de plus de 9 % depuis le début de l'année, retrouvant ainsi ses niveaux d'octobre 1991.

Le dollar a également continué à s'apprécier par rapport au yen japonais, gagnant près de 2 % en février, puis à nouveau 3,5 % au cours des trois premières semaines de mars. Le yen est actuellement plutôt faible en raison de craintes concernant le manque de solidité de l'économie japonaise. De plus, le 16 mars, l'indice Nikkei des cours des actions a chuté de 3 %, tombant ainsi à son niveau le plus bas des cinq dernières années; il n'atteint plus que 49 % de son record de 1989. De ce fait, et compte tenu des faibles niveaux de croissance monétaire dont il sera question plus loin, des voix se sont élevées pour demander une diminution du taux d'escompte officiel japonais; celui-ci se situe actuellement à 4,5 %, ayant été abaissé d'un demi-point en décembre dernier.

La peseta espagnole reste (23 mars) la monnaie la plus forte du mécanisme de change du SME, suivie par le franc belge qui s'est rapproché du sommet de la grille le mois dernier. La livre sterling demeure la monnaie la plus faible, la couronne danoise la distançant de peu.

La peseta a enregistré la variation la plus forte de toutes les monnaies du mécanisme de change en février: elle s'est appréciée de 0,6 % par rapport à l'écu, soit de 1,2 % au total sur les deux premiers mois de l'année. La livre sterling avait également connu une remontée en février, comme cela a été indiqué dans le «dossier» du mois dernier, mais elle s'est à nouveau affaiblie durant les trois premières semaines de mars, en partie à cause du résultat incertain des élections générales qui auront lieu le 9 avril au Royaume-Uni.

RENDEMENTS DES OBLIGATIONS DU SECTEUR PUBLIC: rendements en hausse aux Etats-Unis

En février, le rendement des bons du Trésor des Etats-Unis a progressé de 0,3 % pour atteindre le niveau de 7,8 %. Cette hausse est la première depuis 7 mois; cela signifie que la courbe des rendements aux Etats-Unis est maintenant plus pentue que précédemment puisque les taux à long terme se situent actuellement à 3 ou 4 points au-dessus des taux à court terme, ce qui est un écart assez important si l'on se réfère aux niveaux du passé.

Dans la Communauté européenne, les rendements des obligations du secteur public ont diminué ou sont restés constants au mois de février. Les reculs les plus importants ont été enregistrés en Italie et en Espagne (0,4 % et 0,3 % respectivement), alors que les rendements sont restés inchangés en Allemagne et en France. En Espagne, la diminution des rendements a suivi la légère baisse (1/4 %) des taux d'intérêt à court terme espagnols le 25 février; le taux d'intervention de la Banco de Espana se situe à présent à 12,4 %.

DISPONIBILITES MONETAIRES: accroissement de 3 % de M2 aux Etats-Unis en 1991

Aux Etats-Unis, M2 s'est accru d'un peu moins de 3 % en 1991, contre 3,3 % en 1990. Depuis quelques mois, la croissance de M2 est plus faible qu'au cours des dernières années, ce qui continue à alimenter les inquiétudes concernant la profondeur de la récession aux Etats-Unis. Il en est de même au Japon où M2 s'est accru de 2,5 % au cours des douze mois allant jusqu'en novembre; selon des données provisoires publiées récemment, la croissance de M2 atteignait un rythme annuel inférieur à 2 % au début de 1992.

En Allemagne, le taux de croissance annualisé de M3 continue à dépasser la fourchette visée, atteignant 6,3 % en décembre; selon des données provisoires, les taux ont été encore plus élevés en janvier et en février 1992. Cette accélération de la croissance monétaire paraît contradictoire avec la faiblesse actuelle du niveau de l'activité économique en Allemagne.

AVOIRS SUR L'EXTERIEUR: légère augmentation des réserves d'EUR 12 en 1991

A la fin de 1991, les réserves officielles de change totales de la Communauté européenne dépassaient d'un peu plus de 2 % le niveau atteint 12 mois auparavant. Les plus fortes entrées ont été enregistrées par l'Espagne (11,4 millions d'écus), le Royaume-Uni (4,9 millions d'écus) et le Portugal (2,6 millions d'écus), mais ces entrées ont été compensées par des sorties d'Italie, de France, du Danemark et d'Allemagne. Il en résulte que l'Espagne détient actuellement 20,6 % du total EUR 12, suivie par l'Allemagne (19,7 %) et l'Italie (15,2 %).

Depuis l'adhésion de la peseta au mécanisme de change, en juin 1989, l'Espagne a augmenté ses réserves de près de 14 millions d'écus et durant toute cette période la peseta est restée au sommet ou près du sommet de la grille des parités, ce qui a amené la Banco de Espana à intervenir afin de limiter l'appréciation de la peseta.

COMPTES TRIMESTRIELS: Au cours du troisième trimestre 1991: nouveau ralentissement de l'économie communautaire (PIB +0,2 %), accompagné par une sensible baisse de l'inflation (+0,9 %)

Après la légère reprise enregistrée au cours du deuxième trimestre, le troisième trimestre 1991 a été caractérisé, pour l'économie communautaire dans son ensemble, par un nouveau fléchissement du rythme de croissance de la production (PIB +0,2 %). Ce nouveau fléchissement, tout à fait cohérent avec le plus important indicateur économique, conduit à une nouvelle révision à la baisse des prévisions relatives à la croissance économique au cours de l'année 1991. Les raisons de la persistance de la phase de stagnation peuvent être synthétisées par trois éléments qui interagissent entre eux: tout d'abord la crise interne de l'économie américaine; en deuxième lieu la politique commerciale japonaise, enfin, les problèmes qui caractérisent l'économie allemande après l'unification. En l'état actuel des choses une inversion des tendances de l'économie semble être possible à partir de cette année, mais les conjoncturistes mêmes préfèrent ne pas se prononcer à propos de la portée de cette reprise en liant ceci à beaucoup de facteurs dont un des plus importants semble être la politique monétaire adoptée par les Etats membres.

En ce qui concerne l'inflation mesurée par le défateur implicite du PIB, on constate un sensible ralentissement de la croissance des prix tant en rythme annuel que trimestriel (+0,9 %, +5,0 % respectivement). Ce résultat est particulièrement significatif parce que pour la première fois depuis le troisième trimestre 1989, l'inflation reste en-dessous de 1 %

par trimestre. Ce résultat confirme, même en perspective, la validité des politiques monétaires restrictives adoptées dans la plupart des Etats membres et qui a été caractérisé par les hausses des taux d'intérêt intervenues au cours du mois d'août et plus récemment avant la fin de décembre.

En ce qui concerne les composantes du PIB, on observe le ralentissement des investissements (+0,3 %) accompagné par une légère reprise de la consommation publique (+0,5 %), tandis que pour la consommation privée on observe la poursuite de la phase de stagnation (+0,0 %).

En ce qui concerne la situation dans les Etats membres, nous disposons des données relatives au quatrième trimestre pour l'Allemagne. Ces données indiquent la poursuite du fléchissement de la production (PIB -0,3 %) accompagnée par une inflation toujours élevée (1,3 %). Parmi les composantes du PIB le fait marquant du quatrième trimestre a été pour l'Allemagne la forte baisse des investissements (-2,1 %) accompagnée par une forte progression de la consommation publique (1,7 %).

Aux Etats-Unis, dont on dispose des données relatives au quatrième trimestre, après la révision de la comptabilité trimestrielle américaine, on constate un nouveau ralentissement de la croissance économique (+0,2 %) accompagnée par une inflation inchangée en rythme trimestriel (0,5 %) tandis qu'en rythme annuel on observe un léger ralentissement (+3,0 %). Parmi les composantes de la demande interne le fait marquant est représenté par la phase de stagnation qui caractérise les investissements (0,1 %). Il faut évaluer que depuis le troisième trimestre 1990 les investissements n'ont jamais marqué une augmentation aux Etats-Unis. D'autre part la consommation tant privée que publique est caractérisée par une évolution négative (-0,1 % et -1,4 %).

Pour le Japon on observe un nouveau ralentissement de l'économie (+0,4 %) accompagné par une légère déflation (-0,2 %). Parmi les composantes de la demande, il faut souligner le très net fléchissement de la consommation publique (-1,4 %), accompagné par un ralentissement de la consommation privée (+0,8 %). Par contre, les investissements, après deux trimestres de fléchissement, présentent une faible reprise (+0,1 %).

PRIX: L'inflation annuelle de la CE se maintient: 4,7 % en février 1992

Le taux d'inflation en 12 mois pour l'ensemble de la CE s'est établi à 4,7 % en février (février 1991: 5,5 %); ce niveau est pratiquement inchangé depuis quatre mois.

Entre janvier et février 1992, selon les Etats membres, on constate les hausses suivantes: Portugal 1,3 %, Espagne 0,7 %, Allemagne 0,6 %, Royaume-Uni et Danemark 0,5 %, Pays-Bas 0,4 %, Belgique, France, Grèce et Italie (tous 0,3 %). L'indice du Luxembourg n'a pas changé entre janvier et février.

L'indice trimestriel de l'Irlande a progressé de 0,8 % entre mi-novembre 1991 et mi-février 1992, ce qui correspond à une inflation d'environ 0,3 % en rythme mensuel.

Dans l'ordre croissant de l'inflation des 12 derniers mois, les taux pour les Etats membres sont les suivants (février 1992 par rapport à février 1991 et février 1991 par rapport à février 1990):

	Fév. 92	Fév. 91	Fév. 92	Fév. 91	
	Fév. 91	Fév. 90	Fév. 91	Fév. 90	
Belgique	2,3 %	4,0 %	Pays-Bas	4,3 %	3,1 %
Danemark	2,3 %	2,6 %	Allemagne*	4,3 % ^p	2,7 %
Luxembourg	2,8 %	3,2 %	Italie	5,7 % ^p	6,4 %
France	3,0 % ^p	2,5 %	Espagne	6,7 %	6,0 %
Irlande	3,7 %	2,5 %	Portugal	8,0 %	12,5 %
Royaume-Uni	4,1 %	8,9 %	Grèce	18,2 %	21,8 %

^p = Provisoire
* = L'IPC pour la R.F. d'Allemagne continue à refléter la situation territoriale avant le 3 octobre 1990.

Les chiffres ci-dessus montrent que l'inflation est plus basse qu'il y a un an dans tous les Etats membres excepté l'Allemagne, la France, l'Espagne, les Pays-Bas et l'Irlande.

Les chiffres pour les USA 2,8 % (5,3 %) et le Japon 2,0 % (3,6 %) montrent aussi une tendance décroissante de l'inflation.

PRODUCTION INDUSTRIELLE: Désormais la récession touche également l'Allemagne

En décembre 1991, la production industrielle de la Communauté européenne (EUR 12) n'a donné aucun signe de redressement, bien au contraire car la stagnation a commencé à s'installer en Allemagne (de l'ouest), le plus gros producteur de la Communauté, avec 28 % du total. L'indice de production corrigé du nombre de jours ouvrables pour le mois de décembre est donc actuellement estimé pour EUR 12 à 112,0 (1985=100). Cela signifie que par rapport à décembre 1990, l'indice a enregistré une croissance négative de -1,1 %. En données corrigées des variations saisonnières l'indice était estimé en décembre 1991 à 112,9 contre 114,8 pour le mois précédent. Comparée à la valeur cumulée du troisième trimestre, la production EUR12 corrigée des variations saisonnières a augmenté de 0,2 % au cours du quatrième trimestre 1991 (industrie des biens d'investissement -1,1 %). Pour les différents Etats membres des CE, les taux de croissance (dans la mesure de leur disponibilité) du quatrième trimestre 1991 par rapport au troisième trimestre étaient les suivants: Pays-Bas 3,6 %, Irlande 2,2 % (estimation), France 0,7 %, Italie 0,4 %, Luxembourg -0,1 % (estimation), Royaume-Uni -0,2 %, Allemagne (ouest) -1,0 %, Danemark -3,3 %. On constate donc que la stagnation de la production industrielle se poursuit.

Aux Etats-Unis, la production industrielle continue toujours de stagner avec un taux de croissance en hausse de -0,1 % au cours du quatrième trimestre par rapport aux trimestres précédents et au Japon on observe une récession de la production industrielle de -0,8 %.

Les prix à la production des produits industriels n'ont augmenté pour l'instant (décembre 1991) dans la Communauté européenne que de 2,1 % en taux annuel soit moins qu'à la même période de l'année précédente. Les éventuelles conséquences de la guerre du Golfe se sont donc entretemps estompées.

Actuellement le taux annuel de croissance de 1991 par rapport à 1990 de la production industrielle (NACE 1-4) des différents Etats membres de la CE est le suivant: EUR 12: -0,3 %, Irlande +3,8 %, Pays-Bas +3,7 %, Allemagne +2,8 %, Danemark +2,0 %, Luxembourg 0,4 %, Espagne -0,2 %, France -0,7 %, Italie -2,1 %, Royaume-Uni -2,9 %. Les graphiques des pages 40 et 41 indiquent pour les quatre grands Etats membres les différences d'évolution des taux de croissance de la production en 1991 pour

FR

diverses branches d'activité industrielle. On observe que les évolutions ont parfois été très différentes d'un pays à l'autre: c'est ainsi, par exemple, que l'industrie du bois a connu une expansion en Allemagne tandis que sa production a nettement diminué au Royaume-Uni. Il en va de même pour l'industrie du papier.

L'industrie chimique a par contre stagné dans chacun des quatre grands Etats membres de la CE alors que l'industrie des matières plastiques et du caoutchouc laissaient apparaître des taux de croissance plutôt positifs en Allemagne et en France. Des symptômes particuliers de récession s'observent en Italie et au Royaume-Uni en ce qui concerne la métallurgie et la construction mécanique. L'industrie électrique et la construction automobile tendent plutôt vers la récession ou la stagnation dans l'ensemble des Etats membres. Il en va de même pour l'industrie textile et l'industrie de la chaussure. En ce qui concerne l'habillement, c'est principalement le Royaume-Uni qui a subi de fortes pertes en 1991.

Balance des Paiements

Le déficit du commerce extra-communautaire de novembre est de -4,8 Mrds d'écus. Ce chiffre est moins lourd que la moyenne observée sur 11 mois 1991 (-6,4 Mrds), et reste de l'ordre du solde des échanges extérieurs de novembre 1990. (-5,1 Mrds). Le solde des échanges extra communautaires de novembre 1991 est proche de celui du même mois de l'année précédente malgré une réduction de 37 % du coût d'approvisionnement de la Communauté en pétrole brut et en dollars, ramenée à 27 % en écus. Cette dernière influe sur les importations extra communautaires qui stagnent par rapport à leur niveau de novembre 1990 (0,2 %). Les exportations progressent faiblement, de près de 1 %.

Le déficit des Etats-Unis atteint 5 Mrds d'écus en novembre 1991, soit un niveau proche du solde du commerce extra communautaire. Il s'améliore de près de 4 Mrds comparé à novembre 1990. Les exportations des Etats-Unis sont en progrès de 22,5 % en écus par rapport au niveau bas de novembre 1990, progression ramenée à 12,5 % en dollars. Les importations sont en augmentation de 4,7 % en écus, elles régressent de 5 % en dollars. Il semble que les importations ont été moins affectées à la baisse par les tensions politiques dans le Golfe, que les exportations.

L'excédent japonais approche 6 Mrds d'écus en novembre 1991, frôlant le solde record de septembre (6,3 Mrds d'écus). Les importations japonaises baissent de 6,2 % en écus comparées à celles de novembre 1990, de près de 15 % en dollars et en yens. La progression des exportations est de 12,7 % en écus, de plus de 22 % en dollars et en yens. Cette augmentation marque une décélération par rapport aux taux observés de juillet à octobre, proches de 20 % en écus.

En novembre 1991 l'Allemagne enregistre l'excédent total le plus élevé de tous les pays membres. Il atteint 1,6 Mrd, niveau semblable à celui de novembre 1990. Pour cette période la totalité du solde positif est dégagée par le commerce extra communautaire, tandis qu'en novembre 1991 il y a une réorientation vers le commerce intra, dont le solde est d'un demi milliard d'écus. L'Allemagne est néanmoins le seul pays de la Communauté à dégager un excédent pour le commerce extra en novembre 1991. Le repli de ce dernier est moins

accentué lorsqu'on compare novembre 1991 à 1990, où le territoire du pays est identique, que pour les mois antérieurs à octobre. Cette réduction de l'excédent extra allemand grève moins les résultats communautaires qu'en début d'année. Les Pays-Bas enregistrent aussi un excédent proche du demi milliard. Les autres pays membres sont déficitaires: l'UEBL, le Danemark, le Portugal avec -0,5 Mrd, l'Italie: -1,5 Mrd. Ce pays reste déficitaire malgré une forte amélioration de sa balance extra (d'un milliard) par rapport à novembre 1991. Les soldes de la Grèce, du Royaume-Uni, de l'Espagne et de la France approchent chacun -2 Mrds d'écus

COMMERCE EXTERIEUR

Le solde du commerce extérieur extra-communautaire s'établit à -4,6 Mds en octobre 1991, en légère amélioration (de 0,6 Md) par rapport à octobre 1990, ce déficit est moins lourd que la moyenne observée au troisième trimestre 1991. La réduction de l'excédent extra-communautaire allemand par rapport à octobre 1990 est plus que compensée par l'amélioration des soldes des échanges extra-communautaires de la France, de l'Italie, de l'UEBL et de l'Espagne. Les taux d'évolution des importations et des exportations par rapport à octobre 1990 sont distants de 1,8 point seulement. Les exportations progressent plus vite que les importations (+3 % contre +1,2 %). La chute du coût d'approvisionnement de la Communauté en pétrole brut entre ces deux périodes allège les importations en valeur d'énergie. Ce coût plafonne en octobre 1990 à 36 \$ le baril, et revient à un niveau proche de 20 \$ en octobre 1991, cette baisse atténuée en partie par la hausse du dollar entre ces deux périodes (+11,6 %) reste considérable.

Le déficit des échanges commerciaux des Etats-Unis atteint en octobre 1991 -9 Mds d'écus, soit une amélioration de 1,3 Md par rapport à octobre 1990. Les importations sont en augmentation de 9,6 % en écus entre octobre 1990 et 1991, mais cette hausse traduit plutôt celle du dollar par rapport à l'écu, en effet la progression en dollar est de 2 % seulement. L'évolution des exportations, plus soutenue que celle des importations est de 18,7 % en écus, soit 7 % en dollars.

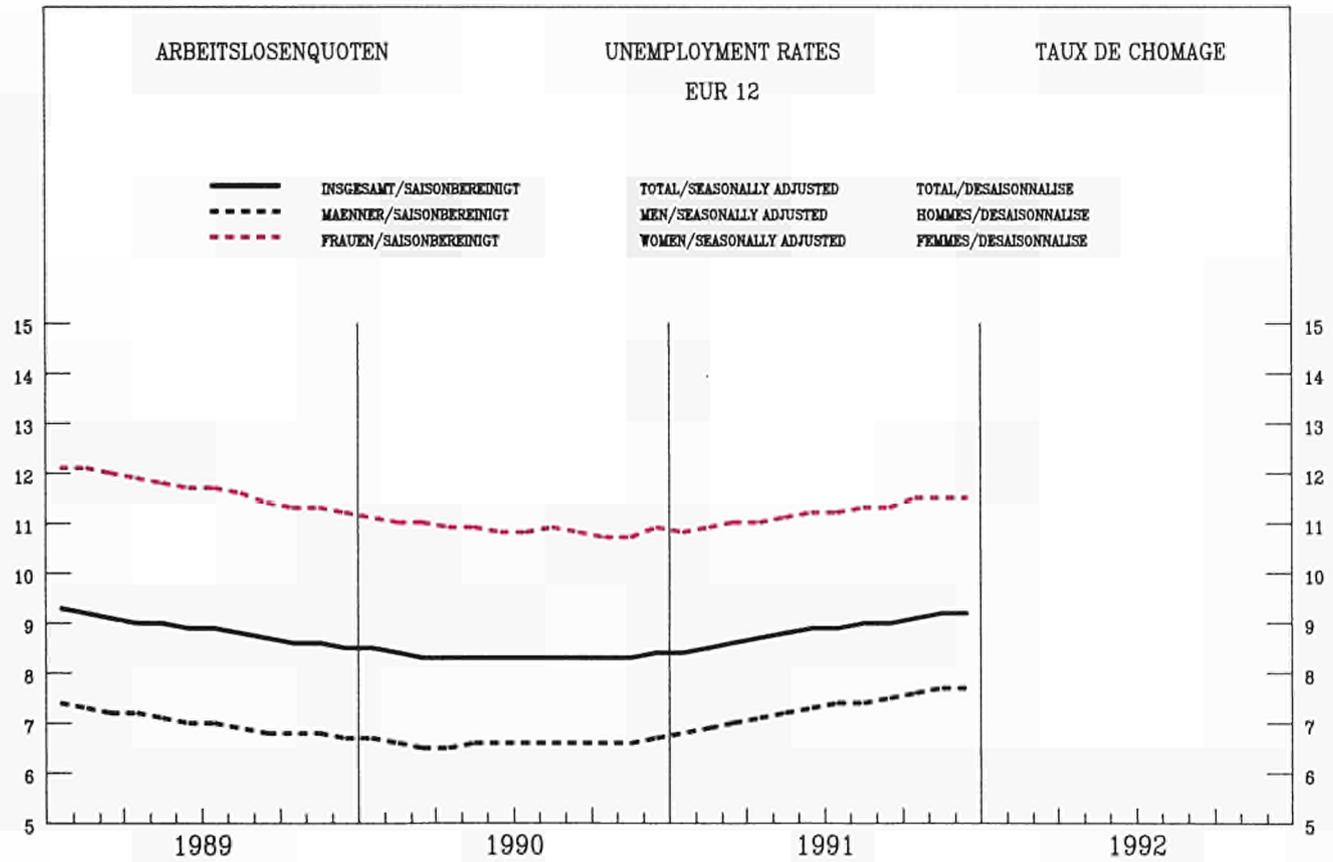

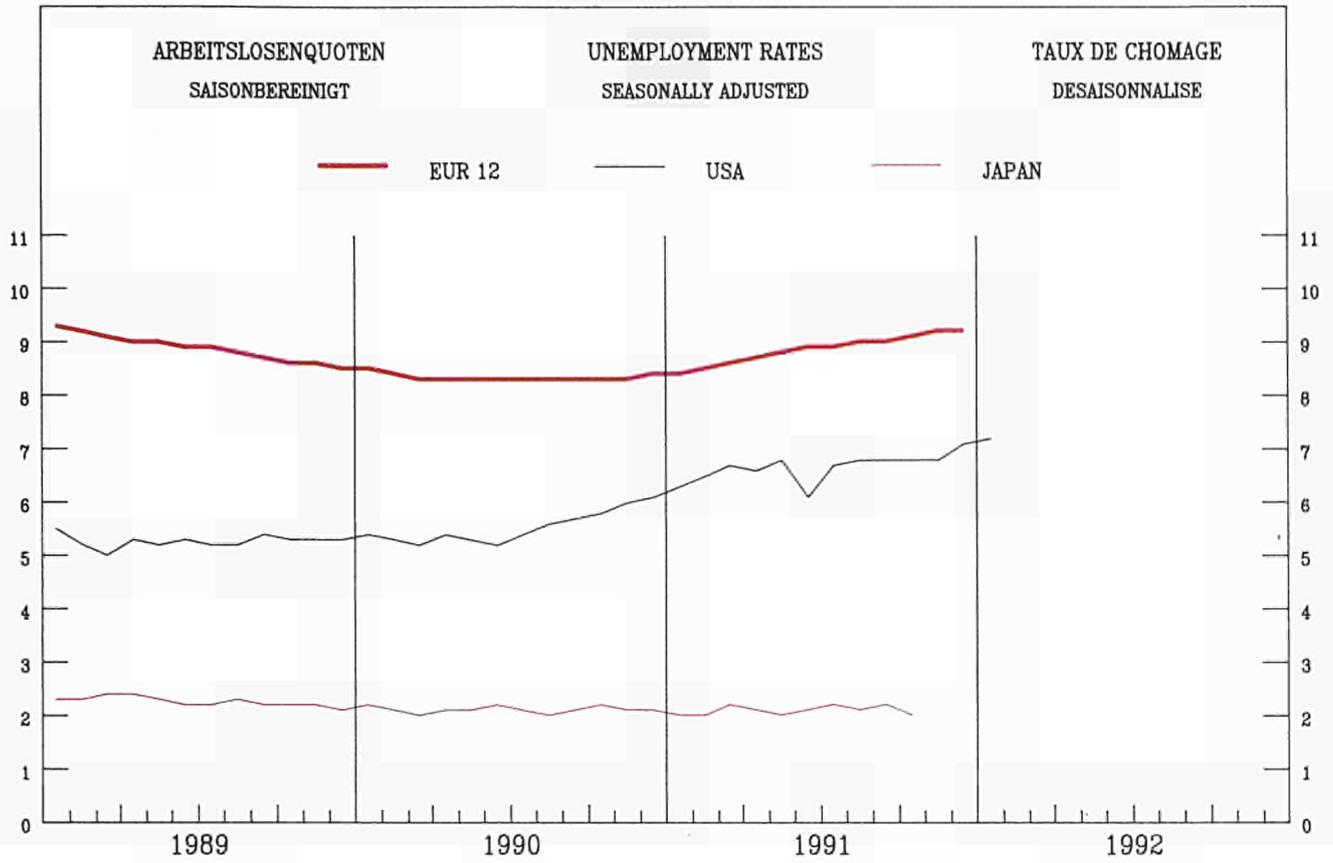

L'excédent japonais d'octobre 1991 reste élevé avec 5,3 Mds d'écus, dans la tendance du troisième trimestre 1991. Les importations du Japon stagnent en écus par rapport à octobre 1990, ce qui correspond à une chute de l'ordre de 11 % tant en yens qu'en dollars. Les exportations sont en ferme progression: +18,1 % en écus, soit près de 7 % en yens et en dollars.

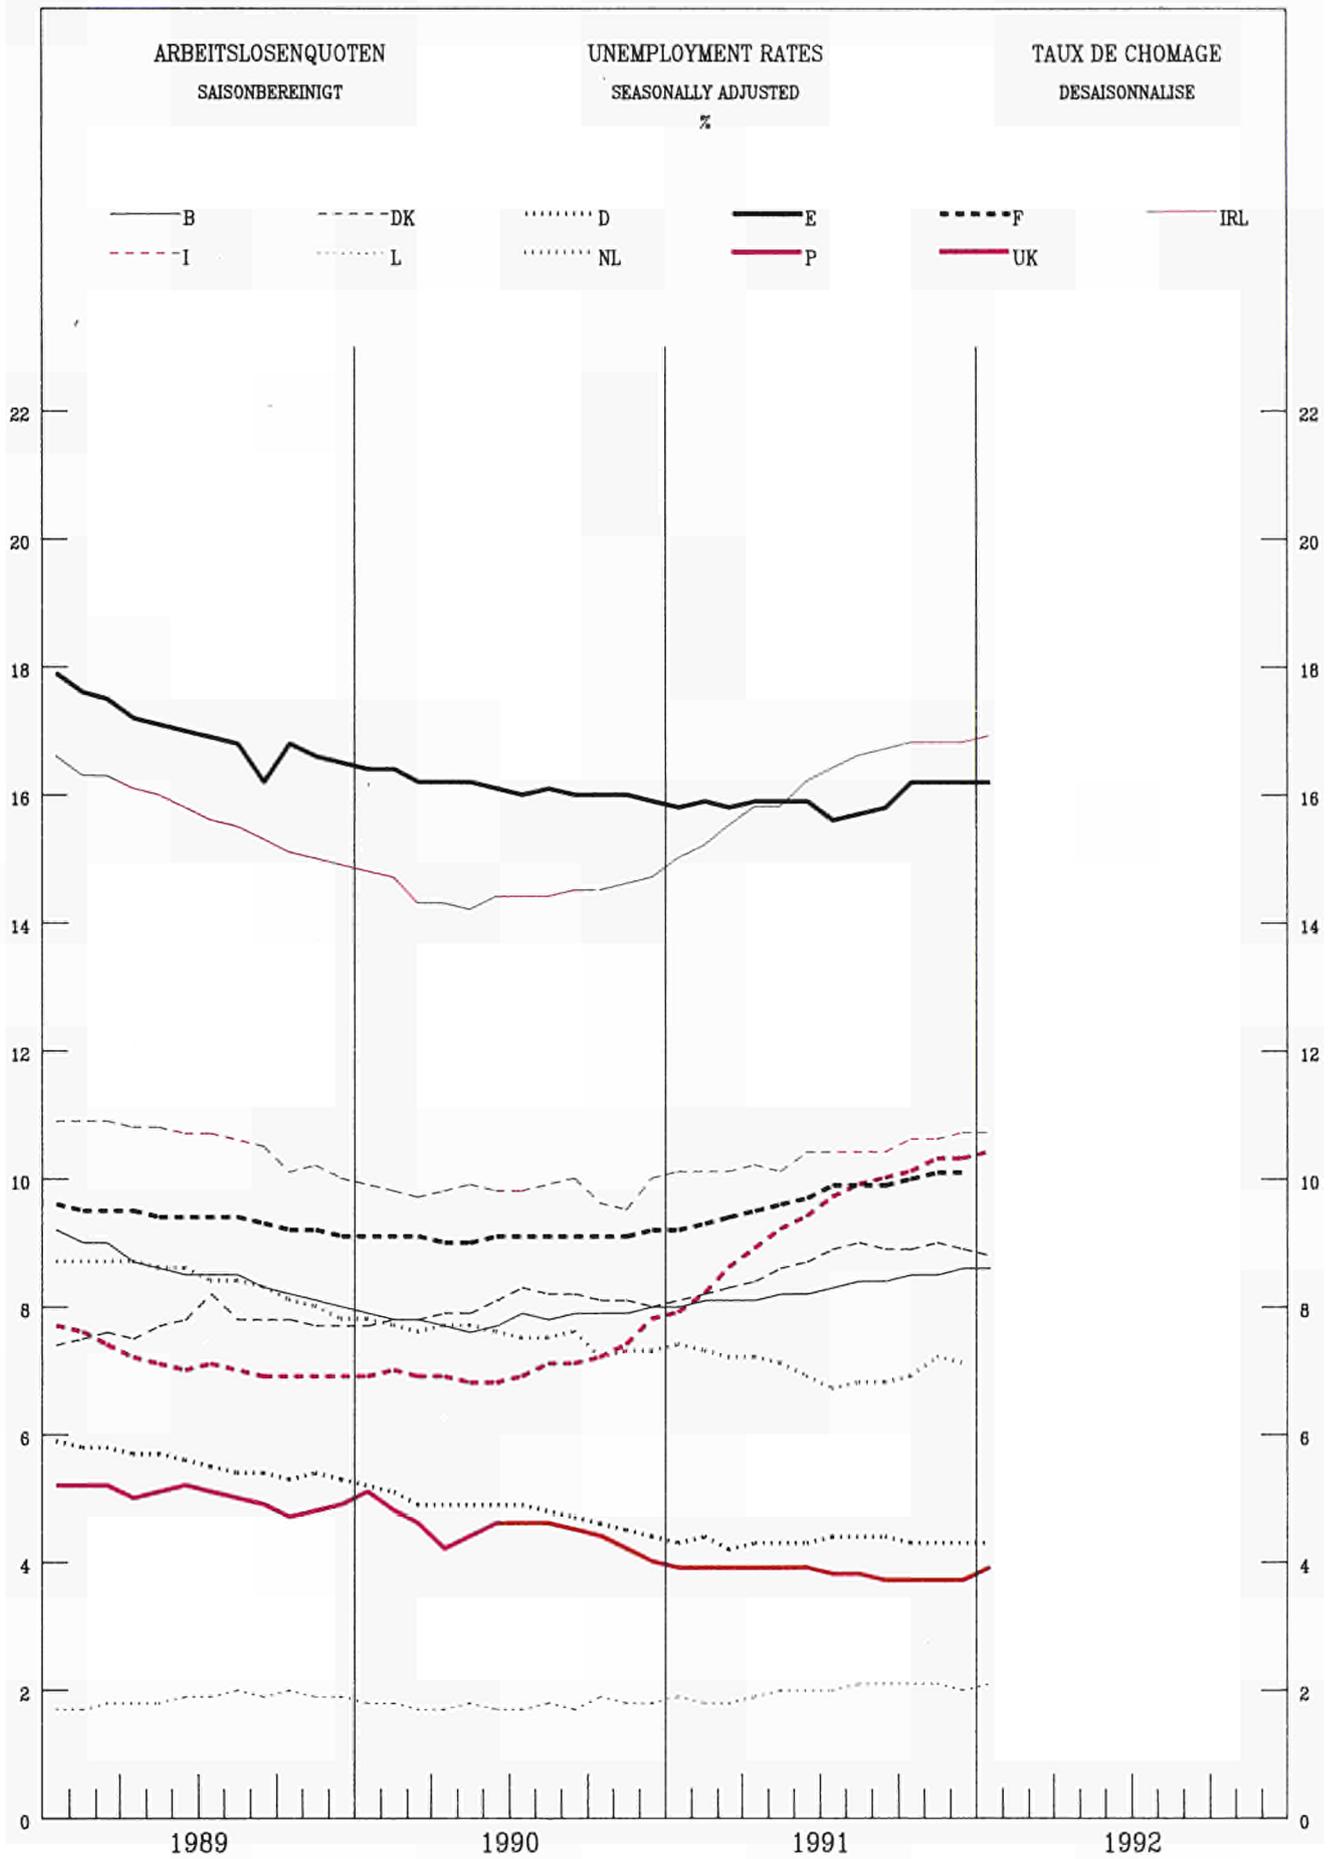

L'excédent allemand se rétracte de 3 Mds d'écus par rapport à octobre 1990. Ce recul affecte autant le commerce intra que les échanges extra. Le solde de l'Allemagne reste néanmoins le plus élevé des pays membres. Plus proches de l'équilibre on trouve les soldes du Danemark, de la France, de l'UEBL, des Pays-Bas. La France améliore son solde de 1,6 Md, tant sur le plan du commerce extra qu'intra. La Grèce, le Portugal, l'Italie ont des déficits proches de -1 Md. Leur situation paraît stationnaire par rapport à octobre 1990. L'Espagne et le Royaume Uni ont des soldes négatifs avoisinant -2 Mds. Le Royaume Uni a rééquilibré ses échanges intra, mais enregistre le solde extra le plus déficitaire.

„On line“-Abfrage

Eurostatistik beinhaltet zwei verschiedene Tabellentypen:

1. Variablen tabellen – 1 Variable pro Tabelle
2. Ländertabellen – ungefähr 30 Variable pro Land

Jede Zeitreihe ist durch einen neunstelligen numerischen Kode gekennzeichnet, der seinerseits in Unterkodes gegliedert ist, welche – im Falle von „Eurostatistik“ – das Land, den Sektor, die Tabelle, die Einheit und die Periodizität bezeichnen.

Die Bedeutung der einzelnen Unterkodes ist der nachstehend aufgeführten Tabelle zu entnehmen.

Land XX	Sektor XX	Tabelle XXXX	Periodizität und Einheit X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A. Variablen tabellen XXXX vierstelliger Wert, der im Titel jeder Tabelle erscheint <hr/> B. Ländertabellen 00XX vor dem Titel jeder Variable (siehe Liste auf der nächsten Seite)	0 jährlich, Angaben in Prozent 1 vierteljährlich, Angaben in Prozent 2 monatlich, Angaben in Prozent 3 jährlich, Indexangaben (1985 = 100) 4 vierteljährlich, Indexangaben (1985 = 100) 5 monatlich, Indexangaben (1985 = 100) 6 jährlich, Angaben in absoluten Werten 7 vierteljährlich, Angaben in absoluten Werten 8 monatlich, Angaben in absoluten Werten 9 Gewicht, EUR 10 = 100 bzw. EUR 12 = 100 (nicht vorhanden für die Ländertabellen)

Beispiele:

1. *Variablen tabelle*: Will man die monatliche Arbeitslosigkeit (in absoluten Zahlen) von Deutschland gemäß Tabelle 0304 dieser Veröffentlichung erfahren, so braucht man nur den Kode 12 93 0304 8 einzugeben.
2. *Ländertabelle*: Will man den Preisindex von Frankreich auf der Basis 1980 = 100 gemäß der Tabelle „Frankreich“ dieser Veröffentlichung erfahren, so braucht man nur den Kode 14 93 0031 3 (jährliche Angaben) oder 14 93 0031 5 (monatliche Angaben) einzugeben.

‘On-line’ consultation

Eurostatistics consists of two types of tables:

1. Table by indicators – 1 indicator by table;
2. Table by country including approximately 30 indicators by country.

Each time series is identified by a nine-digit code broken down into subcodes, which in the case of Eurostatistics, represent the country, sector, table, unit and periodicity.

The significance of the different subcodes may be found in the table below.

Country XX	Sektor XX	Table XXXX	Periodicity and unit X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A. Table by indicator XXXX 4-digit value quoted in the title of each table <hr/> B. Table by country 00XX before each indicator (see following page)	0 annual in % 1 quarterly in % 2 monthly in % 3 annual index 1985 = 100 4 quarterly index 1985 = 100 5 monthly index 1985 = 100 6 annual absolute value 7 quarterly absolute value 8 monthly absolute value 9 weighting EUR 10 = 100 or EUR 12 = 100 (does not exist for tables by country)

Consultation example:

1. *Table by indicator*: to know the monthly unemployment (absolute figures) of Germany as is shown in Table 0304 of this publication, the code 12 93 0304 8 should be formed.
2. *Table by country*: to know the price index, 1980 = 100 for France as shown in the France table of this publication, the code 14 93 0031 3 should be formed for annual figures and 14 93 0031 5 for monthly figures.

Mode de consultation «on-line»

Eurostatistiques comprend deux types de tableaux:

- 1) tableaux par variable – 1 variable par tableau;
- 2) tableaux par pays comprenant environ 30 variables par pays.

Chaque série chronologique est identifiée par un code à neuf chiffres structuré en sous-codes représentant, dans le cas d'Eurostatistiques, le pays, le secteur, le tableau, l'unité et la périodicité.

On trouvera dans le tableau ci-dessous la signification des différents sous-codes.

Pays XX	Secteur XX	Tableau XXXX	Périodicité et unité X
02 EUR 12 03 EUR 10 12 D 14 F 16 I 18 NL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	A – Tableaux par variable XXXX valeur à 4 chiffres figurant dans le titre de chaque tableau <hr/> B – Tableaux par pays 00XX devant le titre de chaque variable (voir liste page suivante)	0 annuelle exprimée en pourcentage 1 trimestrielle exprimée en pourcentage 2 mensuelle exprimée en pourcentage 3 annuelle exprimée en indice 1985 = 100 4 trimestrielle exprimée en indice 1985 = 100 5 mensuelle exprimée en indice 1985 = 100 6 annuelle exprimée en valeur absolue 7 trimestrielle exprimée en valeur absolue 8 mensuelle exprimée en valeur absolue 9 pondération EUR 10 = 100 ou EUR 12 = 100 (inexistant pour les tableaux par pays)

Exemple de consultation:

- 1) *tableau par variable*: pour connaître le chômage mensuel (chiffres absolus) de la RF d'Allemagne, tel qu'il figure au tableau 0304 de cette publication, il suffit d'appeler le code 12 93 0304 8;
- 2) *tableau par pays*: pour connaître l'indice des prix 1980 = 100 de la France tel qu'il figure au tableau «France» de cette publication, il suffit d'appeler le code 14 93 0031 3 (annuel), 14 93 0031 5 (mensuel).
