Mit der monatlich erscheinenden Veröffentlichung *Eurostatistik - Daten zur Konjunkturanalyse* werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

Eurostatistik enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung.

Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

Die in *Eurostatistik* veröffentlichten Daten stammen aus dem ICG -Bereich der On-line-Datenbank Cronos von Eurostat.

Wer Zugang zu Cronos besitzt, kann jederzeit die Tabellen dieser Veröffentlichung abfragen, wobei die Daten täglich auf den neuesten Stand gebracht werden (Hinweise zur On-line -Benutzung finden sich auf der letzten Seite). Darüber hinaus sind die Daten in der Datenbank Eurocron verfügbar, die vom Host Eurobases der Kommission angeboten wird.

WECHSELKURSE: D-Mark-Schwäche ermöglicht Rückgang der europäischen Zinsen

Die Entwicklung an den Devisenmärkten war in den letzten Wochen vor allem von der schwachen Verfassung der D-Mark gegenüber anderen europäischen Währungen sowie gegenüber dem US-Dollar und dem Yen geprägt. Mit einem Kursanstieg um fast 8 % zwischen Ende Mai und dem 24. Juni konnte der Dollar am stärksten von der D-Mark-Schwäche profitieren. Am Markt kam es zu einem Stimmungsumschwung zugunsten des Dollar, so daß zu erwarten ist, daß sich das Zinsgefälle zwischen der amerikanischen und der deutschen Währung als Folge steigender amerikanischer und sinkender deutscher Zinssätze verringern und sich das Halten von Dollar-Guthaben somit verbilligen wird. Gegenüber dem Yen zeigten sich sowohl der Dollar wie auch die D-Mark in schwacher Verfassung, wobei der Dollarkurs in der ersten Junihälfte häufiger einen historischen Tiefstand erreichte, bevor er sich aufgrund politischer Unsicherheiten in Japan wieder etwas festigen konnte; der D-Mark-Kurs gegenüber dem Yen erreichte am 24. Juni seinen tiefsten Stand der Nachkriegszeit, nachdem er seit Ende Mai um 5 % gesunken war. Da die D-Mark als „Ankerwährung“ des Europäischen Währungssystems galt, hatten die deutschen Zinssätze seit der Einführung des Wechselkursmechanismus des EWS im Jahr 1979 die Untergrenze für die kurzfristigen Zinsen in den anderen Mitgliedsländern vorgegeben. Als Folge der D-Mark-Schwäche konnten jedoch die Zentralbanken mehrerer am Wechselkursmechanismus teilnehmender Länder ihre kurzfristigen Zinsen zurücknehmen, ohne daß sich die Position ihrer Währungen innerhalb des Wechselkursmechanismus spürbar verschlechterte. In Frankreich sind die kurzfristigen Zinssätze jetzt zum erstenmal seit vielen Jahren niedriger als in Deutschland; am 21. Juni wurde der Interventionsatz der Banque de France im Rahmen der jüngsten Zinssenkung auf 7 % zurückgenommen; der deutsche Diskontsatz liegt dagegen bei 7 %. Zuletzt waren die französischen Leitzinsen 1967 niedriger als die deutschen. In anderen EG-Ländern waren die Zinsen im Juni ebenfalls rückläufig. Der Banco de Portugal senkte seine beiden wichtigsten Ausleihesätze, den Tagesgeldsatz und den Satz für kurzfristige Wertpapierpensionsgeschäfte, zweimal, zuletzt auf 11,25 % bzw. 11 %. Der Tagesgeldsatz wurde damit seit der Abwertung des Escudo Mitte Mai um fast 6 Prozentpunkte zurückgenommen; der Escudo ist weiterhin die stärkste der am Wechselkursmechanismus teilnehmenden Währungen. Die irische Zentralbank senkte ihren Tagesgeldsatz am 22. Juni auf 7,75 %; das irische Pfund konnte sich gegenüber der D-Mark seit seiner Anfang des Jahres erfolgten Abwertung relativ gut behaupten. Nachdem die dänische Zentralbank ihre kurzfristigen Zinssätze bereits am Tag nach dem Ja der Dänen zur Europäischen Union zurückgenommen hatte, senkte sie ihren Zinssatz auf Einlagenzertifikate erneut am 11. Juni von 8,75 % auf 8,25 %, am 17. Juni auf 8,1 % und am 24. Juni auf 7,95 %. Die Lira, die im September aus dem Wechselkursmechanismus ausschied, hat sich seit dem Amtsantritt der neuen italienischen Regierung im April gegenüber der D-Mark deutlich gefestigt. Insgesamt stieg ihr D-Mark-Kurs um rund 9 %, obwohl die italienischen Zinssätze am 14. Juni erneut um einen halben Prozentpunkt zurückgenommen wurden, so daß der Diskontsatz jetzt bei 10 % liegt. Die isländische Krone, die seit Anfang 1992 an einen Währungskorb gekoppelt ist, an dem der ECU einen Anteil von 76 % hat (1), wurde, nachdem sie bereits im November 1992 abgewertet worden war, am 28. Juni zum zweitenmal innerhalb von sechs Monaten abgewertet, und zwar um 7,5 %. Dieser zweiten Abwertung war ein drastischer Rückgang der Fischpreise vorangegangen, die für die isländische Wirtschaft aufgrund ihrer starken Abhängigkeit vom Fischfang von zentraler Bedeutung sind.

RENDITEN VON STAATSANLEIHEN: Renditerückgang in Spanien

Die Renditen von spanischen Staatsanleihen gingen im Mai um etwas mehr als 0,6 % zurück und haben mit 11,1 % jetzt ihr niedrigstes Niveau seit rund fünf Jahren erreicht; die Zinsstruktur ist in Spanien allerdings weiterhin leicht invers (d.h. die langfristigen Zinsen liegen unter den kurzfristigen). Aufgrund der Position der Peseta unter den am Wechselkursmechanismus teilnehmenden Währungen war es den spanischen Behörden bisher nicht möglich, ihre kurzfristigen Leitzinsen deutlich zurückzunehmen. Ein Renditerückgang geringeren Umfangs war in Dänemark, Frankreich und Italien als Folge sinkender kurzfristiger Zinssätze in diesen Ländern zu verzeichnen. In den USA, Japan, Deutschland und dem Vereinigten Königreich zogen die Renditen dagegen leicht an. Innerhalb der EG ist das niedrigste Renditeniveau derzeit in Deutschland und den Niederlanden, das höchste dagegen in Italien anzutreffen. Obwohl dies aus den Monatsdurchschnitten noch nicht ersichtlich ist, war in der zweiten Junihälfte nach der oben erwähnten Senkung der kurzfristigen Zinsen in Frankreich eine gewisse Annäherung der französischen und der deutschen Renditen festzustellen.

GELDVOLUMEN: in Dänemark, Japan und den USA weiterhin langsames Geldmengenwachstum

In Dänemark, Japan und den USA weitet sich die Geldmenge weiterhin äußerst langsam aus; in Japan nahm M2 sogar ab. In den anderen Ländern liegt das Geldmengenwachstum im allgemeinen nach wie vor innerhalb des Zielkorridors (soweit vorhanden) und in einigen Fällen sogar an seinem unteren Rand. In Italien lag die auf Jahresbasis umgerechnete Zuwachsrate von M2 revidierten Daten zufolge im März gerade noch innerhalb der angestrebten 5 %-7 %, während sie im April leicht zurückging. In Irland beträgt die jährliche Zuwachsrate von M3, wie bereits vor einigen Monaten erwähnt, weiterhin mehr als 25 %. In dieser Entwicklung spiegeln sich allerdings gewisse strukturelle Veränderungen wider; so fand aufgrund der kürzlich eingeführten Steuer auf Spareinlagen eine Mittelverlagerung von Spareinlagen hin zu anderen, im Geldmengenaggregat M3 enthaltenen Anlageformen statt. Zudem wurde Anfang des Jahres, als die irische Währung unter Druck stand, aufgrund der hohen kurzfristigen Zinsen vermehrt auf bestimmte Geldmarktinstrumente zurückgegriffen, die unter die Geldmenge M3 fallen.

AMTLICHE WÄHRUNGSRESERVEN: Starker Zufluß von Reserven in Belgien und Irland

Sowohl Belgien als auch Irland hatten im März einen beträchtlichen Zufluß von Währungsreserven zu verzeichnen. Die belgischen Reserven nahmen um fast 31 % zu und erreichten mit reichlich 11 Mrd. ECU den höchsten jemals verzeichneten Stand. Das Königreich Belgien legte Anfang März eine Euroanleihe in Höhe von 1 Mrd. DM auf, deren Erlös zur Refinanzierung bestehender DM-Anleihen verwendet werden sollte. Dänemark, Griechenland, Frankreich, Italien und das VK hatten ebenfalls einen Zufluß zu verzeichnen, allerdings in geringerem Umfang. Deutschland verringert seine Währungsreserven stetig weiter, nachdem es im September 1992, als die Bundesbank massiv auf den Devisenmärkten intervenierte, indem sie Deutsche Mark verkaufte und die schwächeren Währungen des Wechselkursmechanismus ankufte, zu einem enormen Anstieg gekommen war. Seitdem sind die Reserven Deutschlands um fast 30 Mrd. ECU zurückgegangen, wobei sie aber immer noch um etwa 12 Mrd. ECU über dem Stand von August 1992 liegen.

VIERTELJÄHRLICHE GESAMTRECHNUNGEN: Viertes Quartal 1992: Erneuter Rückgang der Wirtschaftsentwicklung (BIP -0,2 %), Rückgang der Inflation (+0,4 %)

Im vierten Quartal 1992 war für die Wirtschaft in der Gemeinschaft insgesamt ein weiterer Wachstumsrückgang zu verzeichnen (BIP -0,2 %). Aufgrund dieser erneuten Abschwächung betrug das Wachstum im Jahre 1992 nur +0,9 % gegenüber dem Vorjahr, das ist das schlechteste Ergebnis seit 1982. Dieses Ergebnis entspricht im wesentlichen den Vorausschätzungen der GD II. Den meisten Wirtschaftswissenschaftlern zufolge sind nur sehr schwer Anzeichen für eine kurzfristige Erholung der Wirtschaft in der Gemeinschaft festzustellen. Das Jahr 1993 scheint sich indessen noch ungünstiger zu entwickeln. Dagegen läßt die amerikanische Wirtschaft Anzeichen für einen Aufschwung erkennen. Völlig offen bleibt jedoch zur Zeit die Frage, inwieweit die Volkswirtschaften der Gemeinschaft angesichts ihrer internen Probleme von diesem neuen Aufwärtstrend in den Vereinigten Staaten profitieren können. Wir wollen an dieser Stelle kurz auf einen der Faktoren eingehen, die für die gegenwärtige Stagnationsphase charakteristisch sind: die währungspolitischen und finanziellen Spannungen in der zweiten Jahreshälfte. Diese Spannungen waren ausschlaggebend für den Trend zur Heraufsetzung der Zinsen mit dem Ziel, das Gleichgewicht der Wechselkurse innerhalb des EWS aufrechtzuerhalten. Diese Politik hat sich zweifellos nachteilig auf das Wirtschaftswachstum in der Gemeinschaft ausgewirkt, insbesondere in den Weichwährungsändern wie Italien, Vereinigtes Königreich, Spanien und Portugal. Zu Beginn dieses Jahres sind die Zinssätze dank der nachlassenden Spannung auf dem Devisenmarkt und des geringeren Inflationsdrucks langsam gesenkt worden, was vor allem dem Zweck diente, den Konjunkturaufschwung zu fördern. Was die Preisentwicklung betrifft, so ist ein Rückgang sowohl der vierteljährlichen als auch der jährlichen Inflationsrate festzustellen (+0,4 % bzw. +3,1 %). Diese Entwicklung scheint durch die geringe Inlandsnachfrage begünstigt worden zu sein, die dazu geführt hat, daß auch in den Ländern, deren Währungen einen Wertverlust zu verzeichnen hatten, die Preise weiter gesunken sind. Bei den Bestandteilen des BIP muß auf den dritten aufeinanderfolgenden Rückgang der Investitionen (-0,4 %) hingewiesen werden. Die Entwicklung des privaten ebenso wie des öffentlichen Verbrauchs ist eher schwach (+0,4 % bzw. +0,2 %). Was die Situation in den einzelnen Mitgliedstaaten angeht, so liegen für Deutschland Ergebnisse für das erste Quartal und für die Niederlande eine erste Schätzung des BIP vor. Auf der Grundlage dieser Angaben ist eine Verschärfung der negativen Phase für das Wirtschaftswachstum in den Niederlanden (BIP -1,0 %), vor allem aber in Deutschland (BIP -2,3 %) festzustellen. Was die Inflation anbelangt, so ist in Deutschland sowohl auf vierteljährlicher als auch auf jährlicher Basis ein deutlicher Rückgang zu verzeichnen (+0,2 % bzw. +3,4 %). Von den Komponenten der Inlandsnachfrage sei auf den bemerkenswerten Einbruch bei den Investitionen in Deutschland (-4,6 %) hingewiesen. In den Vereinigten Staaten ist für das erste Quartal 1993 ein Stillstand des Wirtschaftswachstums (BIP +0,2 %) bei einem leichten Anstieg der Inflation (+0,9 %) zu verzeichnen. Bei den Komponenten der Inlandsnachfrage war die Zunahme der Investitionstätigkeit (+2,3 %) der bedeutendste Aspekt dieses Quartals. Dagegen ist der öffentliche Verbrauch zum zweiten Mal hintereinander zurückgegangen (-1,8 %), während sich beim privaten Verbrauch eine deutliche Verlangsamung (+0,2 %) bemerkbar gemacht hat. Für Japan war das erste Quartal 1993 durch eine positive Entwicklung des Wirtschaftswachstums (BIP +0,6 %) bei gleichzeitiger leichter Deflation (-0,3 %) gekennzeichnet. Bei den Komponenten der Inlandsnachfrage ist, nach zwei negativen Quartalen, die private Erholung der Investitionstätigkeit (+1,0 %) hervorzuheben. Ferner hat sich der private Verbrauch, nach einer Phase der Unsicherheit, deutlich erhöht (+1,2 %).

PREISE: Die Jahresinflationsrate der EG fällt auf 3,3 % in Mai

Die Jahresinflationsrate für die EG insgesamt gemessen mit dem Verbraucherpreisindex fiel von 3,4 % in April auf 3,3 % in Mai; vor Jahresfrist betrug diese Zahl 4,7 %. Die Jahresinflationsraten sind für alle Mitgliedstaaten mit Ausnahme von Griechenland jetzt niedriger – und in manchen Fällen bedeutend niedriger – wie vor einem Jahr. Besonders starke Rückgänge wurden festgestellt in Irland (0,9 % gegen 3,6 %), im Vereinigten Königreich (1,3 % gegen 4,3 %) und in Portugal (5,7 % gegen 9,8 %). In aufsteigender Reihenfolge nach der derzeitigen Inflation geordnet sind diese Raten und die entsprechenden Angaben des Vorjahres für die einzelnen Mitgliedstaaten wie folgt:

	MAI '93	MAI '92		MAI '93	MAI '92
	MAI '92	MAI '91		MAI '92	MAI '91
Irland	0,9 %	3,6 %	Luxemburg	3,5 %	3,6 %
Dänemark	1,0 %	2,5 %	Deutschland*	4,2 %	4,6 %
Ver. Königreich	1,3 %	4,3 %	Italien	4,2 % ^p	5,5 %
Frankreich	2,0 % ^p	2,8 %	Spanien	4,6 %	6,5 %
Niederlande	2,2 %	4,3 %	Portugal	5,7 %	9,8 %
Belgien	2,7 %	2,8 %	Griechenland	16,4 %	15,8 %

* Der Verbraucherpreisindex der Bundesrepublik Deutschland bezieht sich weiterhin auf den Gebietsstand vor dem 3. Oktober 1990
p = Vorläufig

(1) Der Währungskorb besteht ferner aus dem US-Dollar (18 %) und dem Yen (6 %).

Die entsprechenden Zahlen für die Beitrittskandidaten sind: Norwegen 2,5 % (2,4 %), Finnland 2,6 % (2,4 %), Oesterreich 3,9 % (4,0 %) **, Schweden 4,8 % (2,1 %). Für die Vereinigten Staaten und Japan betragen sie 3,2 % (3,0 %) bzw. 1,1 % (2,4 %). Nach drei aufeinander folgenden Steigerungen vom 0,4 % stieg der monatliche Verbraucherpreisindex für die Gemeinschaft zwischen April und Mai um 0,3 % an. Es wurden die nachstehenden monatlichen Anstiege festgestellt: 0,2 % in Belgien, Frankreich, Griechenland und Luxemburg, 0,3 % in Deutschland und Spanien, 0,4 % in Italien und im Vereinigten Königreich, 0,5 % in Portugal und 0,6 % in Dänemark. Die Niederlande verzeichneten einen Preisrückgang von 0,1 %.

Der Vierteljahresindex für Irland fiel zwischen Mitte-Februar und Mitte-Mai um 0,2 %; dadurch ging die Jahresinflationrate auf 0,9 % herunter, die niedrigste Rate seit 30 Jahren.

Damit ist Irland zur Zeit das Land mit der niedrigsten Inflationsrate in der EG.

ARBEITSLOSIGKEIT IN DER GEMEINSCHAFT

Eurostat schätzt die saisonbereinigte Arbeitslosenquote in der Gemeinschaft für April 1993 auf 10,4 %. Sie liegt damit um 0,1 Prozentpunkt höher als im Vormonat, über das Jahr ist sie um einen ganzen Prozentpunkt gestiegen.

Der Anstieg der Arbeitslosenquote im Vergleich zum Vorjahr ist in allen Mitgliedstaaten festzustellen. Hervorzuheben sind Spanien (+3,0 Punkte), Belgien (+1,2 Punkte), Deutschland im Gebietsstand vor dem 3.10.1990 (+1,1 Punkte) und die Niederlande (+1,0 Punkt).

Die Männer sind von der wachsenden Arbeitslosigkeit mit +1,2 Punkten etwas stärker betroffen als die Frauen (+0,8 Punkte). Die Arbeitslosenquote der Jugendlichen unter 25 Jahren insgesamt stieg um +1,1 Punkte, bei den jungen Männern mit +1,6 Punkten ebenfalls ausgeprägter als bei den jungen Frauen (+0,6 Punkte).

Diese Schätzung der Arbeitslosenquoten und der Zahl der Arbeitslosen schaltet die unterschiedlichen nationalen Methoden zur Erfassung der Arbeitslosigkeit weitgehend aus.

Die Einbeziehung der neuesten verfügbaren Angaben aus der Arbeitskräfteerhebung in Spanien (1. Vierteljahr 1993) führt zu Revisionen früher veröffentlichter Daten.

In Portugal wird derzeit das Verfahren zur Einschreibung beim Arbeitsamt geändert. Die letzten verfügbaren Angaben beziehen sich auf Februar 1993.

Die Arbeitslosenquoten werden geschätzt durch Extrapolation der 1991er Ergebnisse der EG-Arbeitskräfteerhebung in allen Mitgliedstaaten. Die Einbeziehung der 1992er Ergebnisse, sobald verfügbar, kann zu Revisionen der Schätzungen führen.

INDUSTRIEPRODUKTION-Talsole der Rezession noch nicht erreicht

Im Industriebereich (NACE 1-4) fällt die Produktion weiterhin, eine Stabilisierung ist noch nicht in Sicht. Für die Europäische Gemeinschaft (EUR12) beträgt die Veränderungsrate des arbeitstäglich bereinigten Produktionsindex gegenüber dem Wert des gleichen Monats ein Jahr zuvor im Februar 93: -5,0 %, im März 93: -4,0 %. Betrachtet man die letzten drei Monate Januar bis März, so beläuft sich die für EUR12 Veränderungsrate des saisonbereinigten Produktionsindex gegenüber den drei davor liegenden Monaten Oktober bis Dezember auf -0,9 %. In den USA ist die entsprechende Änderungsrate bei +1,3 %, dort ist also eine leichte Erholung spürbar, in Japan dagegen -0,5 % (geschätzt).

Für die einzelnen großen Güterkategorien ist das Bild recht homogen (Änderung der letzten drei verfügbaren Monate gegenüber den drei Vormonaten):

- Grundstoffindustrie: EUR12 +0,2 %, USA +1,1 %, Japan -2,8 %
- Investitionsgüterindustrie: EUR12 -1,3 %, USA +2,2 %, Japan -4,1 %
- Konsumgüterindustrie: EUR12 -0,5 %, USA +1,1 %, Japan -3,0 %

In den Mitgliedstaaten stellt sich die Situation wie folgt dar: überall sinkt oder stagniert die Produktion. Die entsprechenden Veränderungsrate lauteten: Italien 0,9 %, Luxemburg 0,6 %, Vereinigtes Königreich 0,3 %, Portugal 0,3 %, Dänemark -0,9 %, Niederlande -1,5 %, Belgien: -1,9 %, Irland -2,0 %, Frankreich -2,1 %, Spanien -2,8 %, Griechenland -3,8 %, Deutschland (West) -4,5 %.

Die Steigerungsraten der Erzeugerpreise sind in der Europäischen Gemeinschaft nach wie vor recht unterschiedlich, allgemein ist auf der Herstellerseite der Preisdruck allerdings gering, in der Hälfte aller Mitgliedstaaten sinken sogar die Erzeugerpreise. Die jeweils letzte verfügbare Änderungsrate gegenüber dem Vorjahreswert lautet für den gesamten Industriebereich: EUR12 1,6 %, Griechenland 13,1 %, Vereinigtes Königreich 3,6 %, Italien 3,4 %, Irland 2,1 %, Spanien 1,6 %, Deutschland (West) 0,1 %, Frankreich -0,4 %, Dänemark -0,9 %, Belgien -1,0 %, Niederlande -1,1 % und Luxemburg -3,2 %.

** April.

ZAHLUNGSBILANZ – Gesamttendenzen – vorläufige Zahlen für das vierte Quartal 1992:

Die Leistungsbilanz der Gemeinschaft verbesserte sich im vierten Quartal 1992 gegenüber dem entsprechenden Vorjahreszeitraum um 2 Mrd. ECU und schloß mit einem Defizit von 4,8 Mrd. ECU. Die Leistungsbilanz der Vereinigten Staaten verzeichnete ein Defizit von 18,8 Mrd. ECU, was eine Verschlechterung um 11,4 Mrd. ECU bedeutet. In Japan stieg der Leistungsbilanzüberschuß um 6,5 Mrd. ECU auf 26 Mrd. ECU.

Den vorläufigen Zahlen zufolge schloß die Leistungsbilanz der Gemeinschaft im vierten Quartal 1992 mit einem Defizit in Höhe von 4,8 Mrd. ECU und verbesserte sich damit gegenüber dem entsprechenden Vorjahreszeitraum um 2 Mrd. ECU. Bei der Dienstleistungs- und Übertragungsbilanz ist ein leichter Rückgang des Defizits um 0,2 Mrd. ECU auf -7 Mrd. ECU festzustellen, während sich die Handelsbilanz um 2,1 Mrd. ECU verbesserte und damit erstmals nach drei Quartalen mit negativen Ergebnissen wieder einen Überschuß, und zwar in Höhe von 2,2 Mrd. ECU, auswies. In Deutschland und im Vereinigten Königreich stieg das Leistungsbilanzdefizit um 2,5 Mrd. bzw. 1,8 Mrd. ECU. Die französische Leistungsbilanz verbesserte sich um 2,9 Mrd. ECU und wies einen Überschuß von 2,7 Mrd. ECU aus. In Spanien verringerte sich das Defizit um 2 Mrd. ECU auf 2 Mrd. ECU. Diese Veränderungen der Leistungsbilanz sind in erster Linie auf die Entwicklung der Handelsbilanz zurückzuführen: Frankreich +1,4 Mrd. ECU, Spanien +1,7 Mrd. ECU, Deutschland -1,7 Mrd. ECU, Vereinigtes Königreich -1,6 Mrd. ECU. Bei der Dienstleistungs- und Übertragungsbilanz hatte nur Frankreich eine nennenswerte Veränderung, nämlich eine Verbesserung um 1,5 Mrd. ECU, zu verzeichnen.

In den Vereinigten Staaten belief sich das Leistungsbilanzdefizit im vierten Quartal 1992 auf 18,8 Mrd. ECU (23,9 Mrd. USD) gegenüber 7,4 Mrd. ECU (9,3 Mrd. USD) im Vergleichszeitraum des Vorjahres. Die Handelsbilanz schloß mit einem Defizit von 23,1 Mrd. ECU (29,2 Mrd. USD) gegenüber 17,4 Mrd. ECU (21,8 Mrd. USD), während der Überschuß der Dienstleistungs- und Übertragungsbilanz um 5,8 Mrd. ECU auf 4,2 Mrd. ECU (5,4 Mrd. USD) zurückging. Für 1,3 Mrd. ECU des Rückgangs ist der Posten Kapitalerträge und für 4,4 Mrd. ECU der Posten unentgeltliche Regierungsübertragungen verantwortlich.

Den vorläufigen Zahlen zufolge betrug der Leistungsbilanzüberschuß Japans im vierten Quartal 1992 26 Mrd. ECU (33 Mrd. USD, 4048 Mrd. YEN) gegenüber 19,4 Mrd. ECU (24,4 Mrd. USD, 3961 Mrd. YEN) im entsprechenden Zeitraum des Vorjahres. Der Handelsbilanzüberschuß stieg um 3,1 Mrd. ECU auf 28 Mrd. ECU (35,5 Mrd. USD, 4369 Mrd. YEN), nachdem er zuvor fünf Quartale lang unverändert bei 25 Mrd. ECU gelegen hatte. Das Defizit der Dienstleistungs- und Übertragungsbilanz ging um 3,4 Mrd. ECU auf 2,2 Mrd. ECU (2,8 Mrd. USD, 343 Mrd. YEN) zurück. Die Währungsreserven Japans haben sich in diesem Quartal um 0,3 Mrd. ECU (0,5 Mrd. USD, 59 Mrd. YEN) erhöht.

AUSSENHANDEL – Ergebnisse für Januar 1993

Bedingt durch die Einführung von Intrastat, dem neuen System für die Erhebung innergemeinschaftlicher Außenhandelsstatistiken, ergaben sich Verzögerungen bei der Erhebung der Daten über den inner- und außergemeinschaftlichen Handel. Bis heute (30. Juni 1993) sind für den Monat Januar noch keine Daten über den Außenhandel der BLWU, Deutschlands und der Niederlande verfügbar. Auf der Grundlage der von diesen Mitgliedstaaten gelieferten Angaben wurden die gesamten Handelsströme der Gemeinschaft im Januar 1993 geschätzt. Die Veränderungen bei der Datenerhebung scheinen sich auf das Niveau der im Januar 1993 zu verzeichnenden Außenhandelsströme auszuwirken. Daher ist es angezeigt, die Zahlen für Januar 1993 mit denjenigen für die Vormonate zu vergleichen.

Demnach hätte sich das Defizit des außergemeinschaftlichen Handels im Januar 1993 gegenüber dem entsprechenden Vorjahreszeitraum um 3 Mrd. ECU verringert und läge bei -5,6 Mrd. ECU. Die Einfuhren in die Gemeinschaft wären mit -11,2 % stärker zurückgegangen als die Ausfuhren (-4,8 %). Dieser Rückgang wäre allerdings nicht auf die Entwicklung der Kosten für die Rohölversorgung der Gemeinschaft zurückzuführen, die im Januar 1993 im Vergleich zum entsprechenden Vorjahresmonat in ECU je Barrel um 5 % gestiegen sind.

Im Januar 1993 wies die Handelsbilanz der Vereinigten Staaten ein Defizit von 6,5 Mrd. ECU aus, das sind 1 Mrd. ECU weniger als im Vergleichszeitraum des Vorjahres. Die Einfuhren sind in ECU um 12,2 % und in Dollar um knapp 5 % gestiegen. Die Ausfuhren der Vereinigten Staaten nahmen gegenüber Januar 1992 in ECU ausgedrückt um 11,3 % und in Dollar um 4 % zu und sind damit etwas langsamer angestiegen als die Einfuhren. Japan verzeichnet für Januar 1993 einen Handelsbilanzüberschuß von 8,1 Mrd. ECU, gegenüber 6,5 Mrd. ECU im Januar 1992. Gegenüber dem entsprechenden Vorjahreszeitraum stiegen die japanischen Ausfuhren in ECU ausgedrückt im Januar 1993 um 6,1 % an, während sie in Dollar und Yen leicht rückläufig waren. Die japanischen Einfuhren lagen im Januar 1993 in ECU um 1,7 % unter ihrem Niveau vom Januar 1992, in Dollar und in Yen verzeichneten sie einen Rückgang um 8 %.

Eurostatistics - data for short-term economic analysis is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR12), each Member State, the United States and Japan.

Eurostatistics does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

The data published in *Eurostatistics* are taken from the ICG domain of Eurostat's on-line database, Cronos (the notes regarding on-line consultation may be found at the end of this publication). They are also available via the Commission host Eurobases in the Eurocron database.

Further information on *Eurostatistics* can be obtained from the following addresses:

Unless otherwise stated, data for the Federal Republic of Germany, including West Berlin, as constituted prior to 3 October 1990.

EXCHANGE RATES: Deutschemark weakness allows European interest rates to fall

The main feature of the foreign exchange markets in recent weeks has been the weakness of the Deutschemark against other European currencies and against the US dollar and Japanese yen.

In terms of appreciation, the dollar has been the major beneficiary of this weakness, gaining almost 8% between the end of May and June 24. Market sentiment has changed in favour of the dollar, with the likelihood of increases in US interest rates combined with falls in German rates narrowing the rate differential between the two currencies and thus reducing the cost of holding dollars.

Both the dollar and the mark have been weak against the yen, the dollar touching more all-time lows in the first half of June before political uncertainty in Japan led to some strengthening, and the mark traded at post-1945 lows against the yen on June 24, having fallen by 5% since the end of May.

Since the exchange rate mechanism (ERM) of the EMS was set up in 1979, German interest rates have set the floor for short-term rates in the countries of other member currencies, since the Deutschemark was regarded as being the 'anchor' of the system.

However, the Deutschemark's weakness has enabled several ERM central banks to reduce their short-term interest rates without any real weakening of their currencies within the ERM. In the case of France, these rates now stand at levels below the corresponding German rates for the first time in many years: on June 21 the latest reduction in interest rates took the Banque de France's intervention rate to 7%, as compared to the German discount rate of 7%. The last time French official interest rates were below German ones was in 1967.

Rates also fell in other EC countries in June: the Banco de Portugal twice reduced its two main lending rates, the 24-hour advances rate and the short-term repo rate, to stand at 11 and 11% respectively. The former rate has now fallen almost 6 percentage points since the escudo was devalued in the middle of May; the escudo remains at the top of the ERM grid. The Irish central bank reduced its overnight facility rate to 7% on June 22; the punt has traded in a fairly tight range against the DM since its devaluation earlier this year.

Following the reduction in short-term rates the day after the positive vote in the referendum on European Union, the Danish central bank announced three further reductions in its rate on certificates of deposit, from 8 to 8% on June 11, to 8.1% on June 17 and then to 7.95% on June 24.

The lire, which left the ERM in September 1992, has appreciated strongly against the Deutschemark since the new government entered into office in April. In all, the lire has appreciated against the Deutschemark by around 9%, despite a further half-point reduction in Italian interest rates on June 14. The discount rate now stands at 10%.

The Icelandic krone, which since the beginning of 1992 has been linked to a currency basket in which the ecu represents 76% (1), was devalued for the second time in six months on June 28. It was first devalued in November 1993; this second devaluation was of 7% and came after a sharp fall in the price of fish, on which the Icelandic economy is heavily dependent.

GOVERNMENT BOND YIELDS: fall in yields in Spain

Spanish government bond yields fell by just over 0.6% in May, to stand at 11.1%, their lowest level for around five years. The Spanish yield curve remains slightly downward sloping (long-term rates lower than short-term); the Spanish authorities have not been able to decrease their main short-term interest rates significantly because of the peseta's position in the ERM.

There were smaller falls in government bond yields in Denmark, France and Italy, reflecting falls in short-term rates in these countries. However, there were slight increases in yields in the US, Japan, Germany and the UK.

Within the EC, Germany and the Netherlands are currently experiencing the lowest government bond yields, and Italy the highest. Although not yet reflected in the monthly average figures, there was some convergence in the yields on French and German government bond in the second half of June following the reductions in French short-term interest rates referred to above.

MONEY SUPPLY: slow growth continues in Denmark, Japan and the US

Monetary growth in Denmark, Japan and the US remains extremely slow; in Japan there has been an absolute fall in M2.

Elsewhere, monetary growth generally remains within target ranges, where these exist, although in several cases growth is close to the lower limit of the relevant range. Revised data for Italy indicate that the growth rate of M2 in the 12 months to March remained just within its target range of 5-7%, and then slowed slightly in April.

As mentioned several months ago, M3 growth in Ireland continues to grow at over 25% per year. This however reflects certain structural changes that have taken place: a recently implemented tax on savings deposits has meant that there has been a shift from savings deposits to deposits which are included in M3. In addition, the high short-term interest rates which occurred in Ireland at the beginning of the year during the period of pressure on the punt meant that there was a move into certain money market instruments which are included in M3.

FOREIGN OFFICIAL RESERVES: Large inflows of reserves into Belgium and Ireland

Both Belgium and Ireland experienced sizeable inflows of foreign official reserves in March. Belgium's reserves increased by almost 31%, and at just over 11 billion ecus, are at their highest level ever. The Kingdom of Belgium issued a DM 1 billion eurobond at the beginning of March, the proceeds of which were to be used to refinance existing DM borrowings.

There were also smaller inflows into Denmark, Greece, France, Italy and the UK. Germany is steadily reducing its stock of reserves following the huge increase in September 1992 when the Bundesbank intervened heavily in the foreign exchange markets, selling Deutschemarks and buying the weaker ERM currencies. Since then, Germany's reserves have fallen by almost 30 billion ecus, although they remain around 12 billion ecus above their level of August 1992.

QUARTERLY ACCOUNTS: Fourth quarter of 1992: further downturn in economic growth (GDP -0.2%); lower inflation (+0.4%)

In the Community as a whole, the fourth quarter of 1992 again saw a downturn in economic growth (GDP -0.2%). As a result of this further downturn, growth in 1992 was only 0.9% over the previous year, the worst result since 1982. This result is broadly in line with DG II's forecasts. According to most economists, it is very difficult to point to any signs of an upturn in the Community economy in the short term. On the contrary, 1993 seems to be getting under way with even less favourable indicators. On the other hand, there are signs of revival in the US economy. The real unknown factor at this stage is the capacity of the Community economies, given their domestic problems, to take advantage of this new economic phase in the United States. Of the features marking this period of stagnation, it is worth dwelling briefly on the monetary and financial tensions which dominated the second part of the year. These tensions led to an upward trend in interest rates, with a view to maintaining a balance between the exchange rates within the EMS. This policy no doubt had a negative effect on the performance of the Community economies, particularly in the countries with weak currencies, such as Italy, the United Kingdom, Spain and Portugal. In the first months of the current year, following a reduction in tension on the exchange market and an easing of inflationary pressures, interest rates gradually began to fall, mainly in order to foster a revival of economic growth.

As regards price trends, there was a decrease in both the quarterly and annual rates of inflation (+0.4% and +3.1% respectively). This decrease seems to have been fuelled by low internal demand, as a result of which prices continued to fall, even in the countries which devalued their currencies.

With regard to the components of GDP, attention should be drawn to the third consecutive downturn in investment (-0.6%), while both private and public consumption rose slightly (+0.4% and +0.2% respectively).

As regards the situation in the Member States, results are available for the first quarter in Germany, as well as a rapid estimate of GDP for the Netherlands. On the basis of these figures, it would appear that the slump in economic growth is worsening in the Netherlands (GDP -1.0%) and especially in Germany (GDP -2.3%). As for inflation, there is a marked drop in both the quarterly and annual rates in Germany (+0.2% and +3.4% respectively). With regard to the components of domestic demand, it is worth highlighting the substantial fall in investment in Germany (-4.6%).

In the United States there was little sign of economic growth in the first quarter of 1993 (GDP +0.2%) and a slight increase in inflation (+0.9%). As regards the components of domestic demand, the most striking feature of this quarter was the increase in investment (+2.3%). On the other hand, public consumption was down for the second time in a row (-1.3%), while there was a marked slowdown in private consumption (+0.2%).

In Japan, the first quarter of 1993 was marked by the development of economic growth (GDP +0.6%) combined with slight deflation (-0.3%). As regards the components of GDP, there are two developments of note: the healthy recovery in investment (+1.0%) after two quarters of negative growth, and the appreciable increase in private consumption (+1.2%) after a period of uncertainty.

PRICES: EC annual inflation down to 3.3% in May

The annual inflation rate for the EC as a whole as measured by the CPI fell from 3.4% in April to a level of 3.3% in May; a year ago this figure was 4.7%.

The annual inflation rates for all Member States except Greece are now lower and many considerably lower than a year ago. Particularly large reductions are: Ireland (0.9% against 3.6%), the United Kingdom (1.3% against 4.3%) and Portugal (5.7% against 9.8%). In ascending order of current inflation these rates and those a year ago are as follows:

	MAY '93	MAY '92		MAY '93	MAY '92
	MAY '92	MAY '91		MAY '92	MAY '91
Ireland	0.9%	3.6%	Luxembourg	3.5%	3.6%
Denmark	1.0%	2.5%	Germany*	4.2%	4.6%
United Kingdom	1.3%	4.3%	Italy	4.2% ^p	5.5%
France	2.0% ^p	2.8%	Spain	4.6%	6.5%
Netherlands	2.2%	4.3%	Portugal	5.7%	9.8%
Belgium	2.7%	2.8%	Greece	16.4%	15.8%

* The CPI for the Federal Republic of Germany continues to reflect borders prior to 3 October 1990.
p = provisional

The corresponding rates for the applicant member States are: Norway 2.5% (2.4%), Finland 2.6% (2.4%), Austria 3.9% (4.0%**), Sweden 4.8% (2.1%). Those for the United States and Japan are 3.2% (3.0%) and 1.1% (2.4%) respectively. On a monthly basis the CPI for the Community rose by 0.3% between April and May, after three consecutive rises of 0.4%.

The following monthly increases were recorded: 0.2% in Belgium, France, Greece and Luxembourg, 0.3% in Germany and Spain, 0.4% in Italy and the United Kingdom, 0.5% in Portugal and 0.6% in Denmark. There was a fall of 0.1% in the index of the Netherlands.

The quarterly index for Ireland fell by 0.2% between Mid-February and Mid-May 1993; this brought the annual inflation down to 0.9%, its lowest level for 30 years, and gives Ireland at present the lowest inflation rate in the EC.

UNEMPLOYMENT IN THE COMMUNITY

Eurostat estimates that the seasonally-adjusted unemployment rate in the European Community was 10.4% for the month of April 1993, representing an increase of +0.1 percentage points in comparison with the month of March 1993 and +1.0 points in comparison with the month of April 1992.

In every Member State the unemployment rate increased in comparison with the previous year. The largest increases took place in Spain (+3.0 points), Belgium (+1.2 points), Germany (+1.1 points in the old Länder) and the Netherlands (+1.0 points).

The increase in the unemployment rate was slightly greater for men (+1.2 points) than for women (+0.8 points). For young persons aged under 25 (where the increase for men and women together was +1.1 points), the increase was again greater for men (+1.6 points) than for women (+0.6 points).

(1) The rest of the basket is made up of the US dollar (18%) and the yen (6%)

** April figures.

The unemployment rate and the number of unemployed persons are estimated after taking account of the differences between national methods of recording unemployment.

The inclusion of the most recently available data from the labour force survey in Spain (first quarter of 1993) has resulted in the revision of the results published previously.

In Portugal, the procedures for registering at employment offices are under review; the most recent figures available relate to February 1993.

The rate of unemployment is estimated by extrapolating the 1991 results of the labour force surveys for all the Member States. The introduction of the 1992 results, as soon as they become available, will probably lead to a revision of the estimates.

INDUSTRIAL PRODUCTION – Recession has not yet bottomed out

Production in industry (NACE 1-4) is still falling, with no signs of levelling off. The rate of change of the production index adjusted for the number of working days for the European Community (EUR12) was 5.0% down in February 1993, 4.0% down in March 1993, compared with the same month in 1992. The figures for the most recent three-month period, i.e. January to March, show a rate of change in the seasonally-adjusted production index for EUR12 which is 0.9% down on the previous three months, October to December. This figure is +1.3% in the United States, i.e. there are signs of slight recovery, in Japan however this figure is -0.5% (estimated).

The picture is much the same across the board for the individual types of goods (change in the last three months available compared with the previous three months):

- Intermediate goods: EUR12 +0.2%; USA +1.1%, Japan -2.8%,
- Capital goods: EUR12 -1.3%; USA +2.2%, Japan -4.1%,
- Consumer goods: EUR12 -0.5%; USA +1.1%, Japan -3.0

Throughout the Member States production is falling or stagnating, with the following rates of change: Italy 0.9%, Luxembourg 0.6%, United Kingdom 0.3%, Portugal 0.3%, Denmark -0.9%, Netherlands -1.5%, Belgium: -1.9%, Ireland -2.0%, France -2.1%, Spain -2.8%, Greece -3.8%, Germany (West) -4.5%.

The rates of increase in producer prices have again varied very widely from one Member State to another but in general price pressure on the producer side is small and producer prices are even falling in half of the Member States. The most recent figures available show the following changes over the value for the previous year for industry as a whole: EUR12 1.6%, Greece 13.1%, United Kingdom 3.6%, Italy 3.4%, Ireland 2.1%, Spain 1.6%, Germany (West) 0.1%, France -0.4%, Denmark -0.9%, Belgium -1.0%, Netherlands -1.1% and Luxembourg -3.2%.

BALANCE OF PAYMENTS – world trends – provisional figures for fourth quarter of 1992

Improvement of ECU 2 billion in the Community current-account balance compared with fourth quarter of 1991, with a deficit of ECU 4.8 billion. Deficit of ECU 18.8 billion in the American current-account balance, a deterioration of ECU 11.4 billion. Improvement of ECU 6.5 billion in the Japanese current-account balance to a surplus of ECU 26 billion.

According to provisional figures, the Community current-account balance in the fourth quarter of 1992 showed a deficit of 4.8 billion, which represents an improvement of 2 billion compared with the fourth quarter of 1991. The invisibles deficit showed a very slight drop of ECU 200 million to ECU 7 billion. The trade balance was up by ECU 2.1 billion compared with 1991, with a surplus of ECU 2.2 billion after being in deficit for three successive

quarters. There was a notable worsening of the situation in Germany and the United Kingdom, with deficits of ECU 2.5 billion and 1.8 billion respectively. France had a surplus of ECU 2.7 billion, an improvement of 2.9 billion. Spain saw its deficit fall by 2 billion to ECU 2 billion. These changes on current account are mainly due to changes in the trade balance:

France +1.4 billion, Spain +1.7 billion, Germany -1.7 billion, United Kingdom -1.6 billion. As regards invisibles, only France recorded any significant change, with +1.5 billion.

In the United States, the current account showed a deficit of ECU 18.8 billion (USD 23.9 billion) in the fourth quarter of 1992 compared with ECU 7.4 billion (USD 9.3 billion) in the same quarter of 1991. The trade deficit was ECU 23.1 billion (USD 29.2 billion) compared with ECU 17.4 billion (USD 21.8 billion), while the surplus on invisibles showed a drop of ECU 5.8 billion to ECU 4.2 billion (USD 5.4 billion). This drop is attributable above all to the items investment income (down ECU 1.3 billion) and unrequited official transfers (up ECU 4.4 billion).

Provisional figures for the fourth quarter of 1992 give Japan a current-account surplus of ECU 26 billion (USD 33 billion, 4048 billion) against ECU 19.4 billion (USD 24.4 billion, 3961 billion) in the same period of 1991. The trade surplus improved by ECU 3.1 billion to ECU 28 billion (USD 35.5 billion, 4369 billion) after stagnating at around ECU 25 billion for five successive quarters. The invisibles deficit was ECU 2.2 billion (USD 2.8 billion, 343 billion), down by ECU 3.4 billion. Japan's reserves rose over the quarter by ECU 0.3 billion (USD 0.5 billion, 59 billion).

EXTERNAL TRADE – Results for January 1993

Following the introduction of Intrastat, the new system of collection of intra-Community statistics on external trade, the collection of intra- and extra-Community data has been troubled by certain delays. To date (30 June 1993) we have not received the January external trade data for the BLEU, Germany and the Netherlands. On the basis of information supplied by these Member States, we have estimated the total Community flows for January 1993. The changed method of collection of data seems to have affected the level of extra-Community trade flows recorded in January 1993: we will therefore not be too categorical in comparing the figures for January 1993 with those for the preceding months.

The extra-Community trade deficit would appear to have been reduced by ECU 3 billion compared with January 1992, to ECU 5.6 billion in January this year. Extra-Community imports appear to have dropped considerably more markedly than exports (-11.2% and -4.8% respectively). The cost of the Community's supplies of crude oil would seem to have made no contribution to bringing down the cost of imports, as it rose by 5% (in ecus per barrel) between January 1992 and January 1993.

The United States recorded an external trade deficit of ECU 6.5 billion in January 1993, ECU 1 billion more than in January 1992. Imports rose by 12.2% in terms of ecus, and by almost 5% in terms of dollars. US exports showed a year-on-year rise of 11.3% in terms of ecus in comparison with January 1992, and a 4% rise in terms of dollars, representing a slightly lower rate of increase than that attained by imports.

Japan's external trade surplus amounted to ECU 8.1 billion in January 1993, compared with ECU 6.5 billion in January 1992. Japanese exports were 6.1% higher in January 1993 than in January 1992 in terms of ecus but had fallen back slightly in terms of dollars and yen. In January 1993, Japanese imports expressed in ecus were 1.7% lower than in January 1992. The value of Japanese imports fell by nearly 8% in terms of dollars and yen between January 1992 and January 1993.

Eurostatistiques - Données pour l'analyse de la conjoncture est une publication mensuelle qui a pour but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR12), pour les pays membres ainsi que pour leurs principaux partenaires extra-communautaires (États-Unis d'Amérique et Japon).

Eurostatistiques ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les plus importantes parmi celles-ci.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, qui sont par ailleurs disponibles dans les publications spécialisées d'Eurostat.

Les données publiées dans *Eurostatistiques* proviennent du domaine ICG de la base de données Cronos (les instructions pour le mode de consultation on-line se trouvent à la fin de cette publication). Elles sont aussi disponibles dans la base de données Eurocron, accessible par l'intermédiaire du serveur Eurobases de la Commission.

TAUX DE CHANGE: La faiblesse du mark permet la baisse des taux d'intérêt en Europe

Ces dernières semaines, les marchés des changes ont été essentiellement caractérisés par la faiblesse du deutsche mark par rapport aux monnaies européennes, au dollar et au yen. Principal bénéficiaire de cette situation, le dollar a gagné pratiquement 8 % entre la fin du mois de mai et le 24 juin. Le marché donne à nouveau la préférence au billet vert, s'attendant à une hausse des taux d'intérêt américains et à une baisse simultanée des taux allemands qui réduiraient le différentiel de taux entre les deux devises et partant, le coût de la détention de dollars.

Tant la monnaie américaine que l'allemande ont été faibles vis-à-vis du yen. Si le dollar a atteint à plusieurs reprises des minima historiques au cours de la première quinzaine de juin, avant que l'incertitude politique qui règne au Japon ne lui permette de se renforcer quelque peu, le mark se traitait le 24 juin à son niveau le plus bas depuis 1945, ayant perdu 5 % depuis la fin du mois de mai.

Depuis la création du mécanisme des taux de change (MTC) du SME en 1979, les taux d'intérêt allemands ont toujours constitué la référence pour les taux à court terme des autres pays participants, la monnaie allemande étant considérée comme le «pilier» du système. Toutefois, la faiblesse du mark a permis à plusieurs banques centrales de pays participant au MTC de réduire leurs taux à court terme sans que la position de leurs monnaies au sein du MTC ne s'en trouve réellement affectée. C'est ainsi notamment que, pour la première fois depuis de nombreuses années, les taux français sont maintenant inférieurs à leurs correspondants allemands. Depuis la dernière diminution opérée le 21 juin, le taux d'intervention de la Banque de France se situe maintenant à 7 %, alors que le taux d'escompte allemand est à 7 %. Il faut remonter à 1967 pour retrouver des taux officiels français inférieurs aux allemands.

Les taux ont également baissé dans d'autres Etats membres pendant le mois de juin. La Banque du Portugal a réduit à deux reprises ses deux principaux taux, ramenant celui des avances à 24 heures à 11 % et celui de rachat de titres au jour le jour à 11 %. Ce dernier taux a baissé de pratiquement six points depuis la dévaluation de l'escudo à la mi-mai, la monnaie portugaise continuant à occuper le haut de la grille du MTC. La Banque centrale d'Irlande a réduit son taux des avances au jour le jour à 7¼ % le 22 juin; depuis la dévaluation de la monnaie irlandaise au début de l'année, la parité IRL/DM n'a que faiblement évolué.

Après la réduction des taux à court terme intervenue le lendemain du «oui» au référendum sur l'Union européenne, la Banque centrale danoise a encore procédé à trois autres diminutions du taux de ses certificats de dépôt qui est passé de 8¼ % à 8 % le 11 juin, à 8,1 % le 17 juin et à 7,95 % le 24 juin.

La lire, qui a quitté le MTC en septembre 1992, s'est fortement appréciée vis-à-vis du mark depuis que le nouveau gouvernement a été installé au mois d'avril. Au total, la monnaie italienne a gagné pratiquement 9 % par rapport à l'allemande, et ce en dépit de la nouvelle diminution d'un demi-point des taux d'intérêt italiens intervenue le 14 juin. Le taux d'escompte italien se situe aujourd'hui à 10 %.

Liée depuis le début de 1992 à un panier de devises dans lequel l'écu représente 76 % (1), la couronne islandaise a été dévaluée le 28 juin pour la seconde fois en six mois, l'ayant déjà été en novembre 1992. Cette deuxième dévaluation de 7 % intervient après la forte baisse des prix du poisson, produit essentiel pour l'économie islandaise.

RENDEMENTS DES OBLIGATIONS D'ETAT: baisse des rendements en Espagne

En mai, les rendements des obligations d'Etat espagnoles ont baissé d'un peu plus de 0,6 % à 11,1 %, leur niveau le plus bas depuis cinq ans. La courbe des rendements reste légèrement inversée (avec des taux à long terme inférieurs à ceux à court terme). En fait, les autorités espagnoles n'ont pas été à même d'abaisser de façon significative leurs principaux taux à court terme en raison de la position de la peseta au sein du MTC.

Des diminutions moins importantes des rendements des obligations d'Etat — correspondant à la baisse des taux à court terme — ont été observées au Danemark, en France et en Italie. Toutefois, les rendements ont légèrement augmentés aux Etats-Unis, au Japon, en Allemagne et au Royaume-Uni.

Au sein de la Communauté, les taux les plus bas ont actuellement cours en Allemagne et aux Pays-Bas, tandis que le taux le plus haut est pratiqué par l'Italie. Bien que cela n'apparaisse pas encore explicitement dans les moyennes mensuelles, on a assisté à une certaine convergence des rendements français et allemands au cours de la seconde moitié de juin à la suite de la réduction des taux français à court terme dont question plus haut.

MASSE MONETAIRE: la croissance reste lente au Danemark, au Japon et aux Etats-Unis

La croissance de la masse monétaire reste extrêmement lente au Danemark, aux Etats-Unis et au Japon. Dans ce dernier pays, il y a même eu baisse de M2 en chiffres absolus.

Ailleurs, la croissance de la masse monétaire reste généralement dans les fourchettes objectives qui ont été fixées, même si dans plusieurs pays, elle est plutôt proche de la limite inférieure. Les données révisées pour l'Italie montrent que la croissance monétaire de M2 entre mars 92 et mars 93 est restée juste à l'intérieur de la fourchette de 5-7 %, avant de ralentir légèrement en avril.

Ainsi qu'indiqué il y a plusieurs mois, M3 continue de croître en Irlande à un rythme annuel supérieur à 25 %. Cette situation a une explication structurelle, un impôt sur les dépôts d'épargne récemment entré en vigueur ayant entraîné un glissement des dépôts d'épargne vers les dépôts qui sont compris dans M3. En outre, les taux d'intérêt à court terme particulièrement élevés qui étaient pratiqués en Irlande au début de l'année à l'époque où la livre subissait des pressions a provoqué un mouvement vers certains instruments du marché monétaire faisant eux aussi partie de M3.

RESERVES OFFICIELLES SUR L'ETRANGER: Importantes entrées de réserves en Belgique et en Irlande

La Belgique ainsi que l'Irlande ont enregistré en mars d'importantes entrées de réserves de change officielles. Les réserves de la Belgique se sont accrues de près de 31 %, dépassant de peu les 11 milliards d'écus, ce qui constitue le plus haut niveau jamais atteint. Le Royaume de Belgique a lancé début mars une émission euro-obligataire d'un milliard de DM dont le produit doit être utilisé pour refinancer les emprunts en DM existants.

Le Danemark, la Grèce, la France, l'Italie et le Royaume-Uni ont enregistré, pour leur part, des entrées plus faibles.

L'Allemagne continue à réduire de manière constante son stock de réserves qui avait considérablement augmenté en septembre 1992, date à laquelle la Bundesbank est intervenue en force sur les marchés des changes en vendant du DM et en achetant des monnaies du mécanisme de change plus faibles. Depuis lors, les réserves allemandes ont baissé de près de 30 milliards d'écus, mais elles dépassent néanmoins encore d'environ 12 milliards d'écus leur niveau d'août 1992.

COMPTES TRIMESTRIELS: Au cours du quatrième trimestre 1992: nouveau fléchissement de la croissance économique (PIB -0,2 %); baisse de l'inflation (+0,4 %)

Le quatrième trimestre 1992 a été caractérisé, pour l'économie communautaire dans son ensemble, par un nouveau fléchissement de la croissance économique (PIB -0,2 %). A cause de ce nouveau fléchissement, la croissance au cours de l'année 1992 a été seulement de +0,9 % par rapport à l'année précédente, le résultat le plus négatif depuis 1982. Ce résultat est substantiellement en ligne avec les prévisions de la DG II. Selon la plupart des économistes il est très difficile d'identifier des signaux de reprise à court terme pour l'économie communautaire. Par contre, l'année 1993 semble se présenter avec des caractéristiques encore moins favorables. D'autre part, des signaux de reprise viennent de l'économie américaine. La vraie inconnue de cette phase est représentée par la capacité des économies communautaires, étant donné leurs problèmes internes, de profiter de cette nouvelle phase économique aux Etats-Unis. Parmi les éléments qui caractérisent cette phase de stagnation, il nous semble utile de nous arrêter brièvement sur les tensions monétaires et financières qui ont caractérisé la deuxième partie de l'année. Ces tensions ont déterminé une tendance à la hausse des taux d'intérêt, dans le but de maintenir l'équilibre du taux de change à l'intérieur du SME. Cette politique a sans doute influencé de manière négative la performance des économies communautaires, surtout dans les pays à devises faibles comme, par exemple, l'Italie, le Royaume-Uni, l'Espagne et le Portugal. Dans la première partie de l'année en cours, grâce d'un côté à une réduction de tension sur le marché des changes et de l'autre côté à une plus faible pression inflationniste, les taux d'intérêt ont commencé lentement à descendre, surtout dans le but de favoriser la reprise de la croissance économique.

En ce qui concerne l'évolution des prix, on enregistre une baisse de l'inflation tant en rythme trimestriel qu'annuel (+0,4 % et +3,1 % respectivement). Cette baisse semble être favorisée par la faiblesse de la demande interne grâce à laquelle, même dans les pays où il y a eu une dévaluation des devises, les prix ont continué à baisser.

En ce qui concerne les composantes du PIB, il faut souligner le troisième fléchissement consécutif des investissements (-0,6 %). Tandis que la consommation, tant privée que publique, présente une évolution plutôt faible (+0,4 % et +0,2 % respectivement).

En ce qui concerne la situation dans les Etats membres, on dispose des résultats pour le premier trimestre en Allemagne et d'une estimation rapide du PIB aux Pays-Bas. Sur la base de ces éléments, on constate une accentuation de la phase négative pour la croissance économique aux Pays-Bas (PIB -1,0 %) mais surtout en Allemagne (PIB -2,3 %). Du côté de l'inflation, en Allemagne on constate une baisse sensible tant en rythme trimestriel qu'annuel (+0,2 % et +3,4 % respectivement). Parmi les composantes de la demande interne il nous semble utile de souligner pour l'Allemagne la chute remarquable des investissements (-4,6 %).

Aux Etats-Unis on observe, pour le premier trimestre 1993, un temps d'arrêt dans la croissance économique (PIB +0,2 %) accompagnée par une légère reprise de l'inflation (+0,9 %). Parmi les composantes de la demande interne, le fait marquant de ce trimestre a été représenté par la progression des investissements (+2,3 %). Par contre, la consommation publique est caractérisée par le deuxième fléchissement consécutif (-1,8 %), tandis que la consommation privée l'est par un sensible ralentissement (+0,2 %).

Pour le Japon, le premier trimestre 1993 a été caractérisé par une évolution positive de la croissance économique (PIB +0,6 %) accompagnée par une légère déflation (-0,3 %). Parmi les composantes du PIB, il faut souligner, après deux trimestres négatifs, la bonne reprise des investissements (+1,0 %). D'ailleurs, la consommation privée, après une phase d'incertitude, se caractérise par une sensible accentuation (+1,2 %).

PRIX: L'inflation annuelle de la CE descend à 3,3 % en mai

Le taux d'inflation annuelle de l'ensemble de la CE mesuré par l'IPC a flechi de 3,4 % en avril à 3,3 % en mai; il y a un an ce chiffre était de 4,7 %.

Les taux d'inflation de tous les Etats membres à l'exception de la Grèce sont actuellement plus bas — et dans plusieurs cas considérablement plus bas — qu'il y a un an.

Les reculs les plus importants ont été observés en Irlande (0,9 % contre 3,6 %), au Royaume-Uni (1,3 % contre 4,3 %) et au Portugal (5,7 % contre 9,8 %).

Par ordre croissant les taux actuels d'inflation et ceux d'il y a un an pour les Etats membres sont les suivants:

	MAI '93	MAI '92	MAI '91		MAI '93	MAI '92	MAI '91
Irlande	0,9 %	3,6 %	4,7 %	Luxembourg	3,5 %	3,6 %	3,6 %
Danemark	1,0 %	2,5 %	3,6 %	R.F.d'Allemagne*	4,2 %	4,6 %	4,6 %
Royaume-Uni	1,3 %	4,3 %	4,3 %	Italie	4,2 % ^p	5,5 %	5,5 %
France	2,0 % ^p	2,8 %	2,8 %	Espagne	4,6 %	6,5 %	6,5 %
Pays-Bas	2,2 %	4,3 %	4,3 %	Portugal	5,7 %	9,8 %	9,8 %
Belgique	2,7 %	2,8 %	2,8 %	Grèce	16,4 %	15,8 %	15,8 %

* L'IPC pour la R.F.d'Allemagne continue à se rapporter à la situation territoriale avant le 3 octobre 1990.
p = provisoire.

(1) Les autres monnaies du panier sont le dollar US (18 %) et le yen (6 %).

Les taux correspondants pour les Etats candidats à l'adhésion à la CE sont: Norvège 2,5 % (2,4 %), Finlande 2,6 % (2,4 %), Autriche** 3,9 % (4,0 %), Suède 4,8 % (2,1 %). Les taux pour les Etats-Unis et le Japon sont respectivement 3,2 % (3,0 %) et 1,1 % (2,4 %).

En rythme mensuel l'IPC pour la Communauté a augmenté de 0,3 % entre avril et mai, après trois hausses consécutives de 0,4 %.

Les augmentations ont été les suivantes: 0,2 % en Belgique, France, Grèce et au Luxembourg, 0,3 % en Allemagne et Espagne, 0,4 % en Italie et au Royaume-Uni, 0,5 % au Portugal et 0,6 % au Danemark.

Les Pays-Bas ont enregistré une baisse de 0,1 % de leur indice.

L'indice trimestriel de l'Irlande a diminué de 0,2 % entre mi-février et mi-mai 1993; ceci ramène le taux d'inflation annuelle à 0,9 %, ce qui est le taux le plus bas observé depuis 30 ans dans ce pays et qui fait de l'Irlande le pays où le taux d'inflation est actuellement le plus bas de la CE.

LE CHOMAGE DANS LA COMMUNAUTE

Eurostat estime que, dans la Communauté européenne, le taux de chômage corrigé des variations saisonnières atteint 10,4 % au mois d'avril 1993, en hausse de +0,1 point de pourcentage par rapport au mois de mars 1993 et de +1,0 point par rapport au mois d'avril 1992.

PAGE 1 = Dans tous les Etats membres, le taux de chômage augmente par rapport à l'année précédente. Les hausses les plus importantes se sont produites en Espagne (+3,0 points), Belgique (+1,2 point), Allemagne (+1,1 point dans les anciens Länder) et aux Pays Bas (+1,0 point).

La hausse du taux de chômage est légèrement plus forte chez les hommes (+1,2 point) que chez les femmes (+0,8 point). Pour les jeunes de moins de 25 ans (+1,1 point pour l'ensemble des hommes et des femmes) l'augmentation est également plus importante chez les hommes (+1,6 point) que chez les femmes (+0,6 point).

Le taux de chômage et le nombre de chômeurs sont estimés après correction des différences dans les méthodes nationales de recensement du chômage. L'introduction des dernières données disponibles de l'Enquête sur les forces du travail (1er trimestre 1993) en Espagne a entraîné la révision des résultats publiés les mois précédents.

Au Portugal, une révision des procédures relatives à l'inscription aux bureaux de placement est en cours; le dernier chiffre connu concerne février 1993.

Le taux de chômage est estimé en extrapolant les résultats 1991 des enquêtes sur les forces de travail pour tous les Etats membres. L'introduction des résultats de l'année 1992, dès qu'ils seront disponibles, entraînera probablement une révision des estimations.

PRODUCTION INDUSTRIELLE — La récession n'a pas encore touché le fond du gouffre

Dans le secteur industriel (NACE 1-4), la baisse de la production se poursuit et rien ne laisse présager une stabilisation. Pour la Communauté européenne (EUR12), le taux de variation de l'indice de la production industrielle corrigé du nombre de jours ouvrables est, par rapport à la valeur du même mois de l'année précédente, en février 93: -5,0 %, en mars 93: -4,0 %. Les chiffres des trois derniers mois (de décembre à février) montrent que le taux de variation de l'indice de production corrigé des variations saisonnières pour EUR12 est de -0,9 % par rapport aux trois mois précédents (d'octobre à décembre). Aux Etats-Unis, le même taux de variation s'élève à +1,3 %, ce qui préfigure une légère reprise, au Japon au contraire le taux de variation s'élève à -0,5 % (estimation).

En ce qui concerne les grandes catégories de marchandises, la situation est assez homogène (variation des trois derniers mois disponibles par rapport aux trois mois précédents):

Industrie des biens intermédiaires:	EUR12 +0,2 %, USA +1,1 %, Japon -2,8 %
Industrie des biens d'investissement:	EUR12 -1,3 %, USA +2,2 %, Japon -4,1 %
Industrie des biens de consommation:	EUR12 -0,5 %, USA +1,1 %, Japon -3,0 %

La situation dans les Etats membres se résume ainsi: la production baisse ou stagne partout. Les taux de variation correspondants ont évolué comme suit: Italie 0,9 %, Luxembourg 0,6 %, Royaume Uni 0,3 %, Portugal 0,3 %, Danemark -0,9 %, Pays-Bas -1,5 %, Belgique: -1,9 %, Irlande -2,0 %, France -2,1 %, Espagne -2,8 %, Grèce -3,8 %, Allemagne (Ouest) -4,5 %.

Dans la Communauté européenne, les taux d'augmentation des prix à la production sont toujours très variables. En général, la pression sur les prix exercée par les producteurs est faible et on assiste même à une baisse des prix à la production dans la moitié des Etats membres. Pour l'ensemble du secteur industriel, les derniers taux de variation disponibles

** Chiffres pour avril.

par rapport à la valeur de l'année dernière ont évolué comme suit: EUR12 1,6 %, Grèce 13,1 %, Royaume-Uni 3,6 %, Italie 3,4 %, Irlande 2,1 %, Espagne 1,6 %, Allemagne (Ouest) 0,1 %, France -0,4 %, Danemark -0,9 %, Belgique -1,0 %, Pays-Bas -1,1 % et Luxembourg -3,2 %

BALANCE DES PAIEMENTS — tendances mondiales — chiffres préliminaires pour le quatrième trimestre de 1992:

Amélioration de 2 mrds d'écus de la balance courante communautaire par rapport au quatrième trimestre de 1991: la balance accuse un déficit de 4,8 mrds d'écus. La balance courante américaine enregistre un déficit de 18,8 mrds d'écus correspondant à une détérioration de 11,4 mrds d'écus. La balance courante japonaise s'améliore de 6,5 mrds pour atteindre un excédent de 26 mrds d'écus.

Au quatrième trimestre de 1992, selon les chiffres préliminaires, la balance courante communautaire atteindrait un déficit de 4,8 mrds d'écus soit une amélioration de 2 mrds par rapport au quatrième trimestre de 1991. Le déficit des invisibles accuserait une très légère baisse de 0,2 mrd d'écus pour atteindre -7 mrds d'écus. Le solde des marchandises serait en amélioration de 2,1 mrds d'écus et atteindrait ainsi 2,2 mrds d'écus redevenant positif après 3 trimestres de déficit. On notera l'aggravation du déficit de l'Allemagne et du Royaume-Uni de respectivement -2,5 mrds et -1,8 mrd d'écus. La France enregistre un excédent de 2,7 mrds d'écus en augmentation de 2,9 mrds. L'Espagne voit son déficit diminuer de 2 mrds pour atteindre 2 mrds d'écus. Ces variations sur le solde courant sont dues principalement aux variations sur le solde des marchandises: France +1,4 mrd, Espagne +1,7 mrd, Allemagne -1,7 mrd, Royaume-Uni -1,6 mrd. Au niveau des invisibles, seule la France enregistre une variation notable de +1,5 mrd.

Aux Etats-Unis, le solde courant atteint un déficit de 18,8 mrds d'écus au quatrième trimestre de 1992 (USD 23,9 mrds) à comparer aux 7,4 mrds d'écus au cours du même trimestre de 1991 (USD 9,3 mrds). Le déficit commercial atteint 23,1 mrds d'écus (USD 29,2 mrds) après 17,4 mrds d'écus (USD 21,8 mrds), l'excédent des invisibles accuse une baisse de 5,8 mrds d'écus pour tomber à 4,2 mrds d'écus (USD 5,4 mrds). Cette baisse est surtout imputable aux postes revenus des investissements pour 1,3 mrd d'écus et transferts unilatéraux officiels pour 4,4 mrds d'écus.

Au quatrième trimestre de 1992, selon les chiffres préliminaires, l'excédent courant japonais atteindrait 26 mrds d'écus (USD 33 mrds, YEN 4048 mrds) après 19,4 mrds d'écus (USD 24,4 mrds, YEN 3961 mrds) pour la même période de 1991. L'excédent commercial se serait amélioré de 3,1 mrds d'écus pour atteindre 28 mrds d'écus (USD 35,5 mrds, YEN 4369 mrds) après avoir stagné pendant cinq trimestres autour de 25 mrds d'écus. Le déficit des invisibles atteindrait 2,2 mrds d'écus (USD 2,8 mrds, YEN 343 mrds) en baisse de 3,4 mrds d'écus. Au cours de ce trimestre, les réserves du Japon auraient enregistré une hausse de 0,3 mrd d'écus (USD 0,5 mrd, YEN 59 mrds).

COMMERCE EXTERIEUR — Résultats de janvier 1993

Suite à la mise en place d'Intrastat, nouveau système de collecte des statistiques intra-communautaires du commerce extérieur, des retards sont survenus dans la collecte des données intra et extra-communautaires. A ce jour (30 juin 1993) nous ne disposons pas des chiffres du commerce extra de l'UEBL, de l'Allemagne, des Pays-Bas pour le mois de janvier. Sur la base d'informations fournies par ces pays membres on a estimé les flux totaux communautaires pour janvier 1993. Le changement de collecte des données paraît influencer sur le niveau des flux extra-communautaires échangés en janvier 1993: on restera donc prudent en comparant les chiffres de janvier 1993 à ceux des mois précédents.

En janvier 1993 le déficit du commerce extra-communautaire se réduirait de 3 mrds d'écus par rapport à janvier 1992, il atteindrait -5,6 mrds d'écus. Les importations extra-communautaires seraient affectées par une forte baisse (-11,2 %), plus prononcée que celle des exportations (-4,8 %). Le coût d'approvisionnement de la Communauté en pétrole brut ne participerait pas à l'allègement des importations, car il progresse de 5 % en écus par baril entre janvier 1992 et 1993.

Les échanges des Etats-Unis enregistrent un déficit de 6,5 mrds d'écus en janvier 1993, alourdi d'un milliard d'écus par rapport à janvier 1992. Les importations progressent de 12,2 % en termes d'écus, de près de 5 % en dollars. Les exportations des Etats-Unis croissent de 11,3 % en écus par rapport à janvier 1992, et de 4 % en dollars, soit un peu moins vite que les importations.

L'excédent commercial japonais atteint 8,1 mrds d'écus en janvier 1993, contre 6,5 mrds en janvier 1992. Les exportations du Japon augmentent de 6,1 % en écus rapportées à janvier 1992, elles observent un léger repli en dollars comme en yens. En janvier 1993 les importations japonaises exprimées en écus sont inférieures de 1,7 % à leur niveau de janvier 1992. Les flux importés au Japon marquent une baisse de près de 8 % en dollars et en yens, entre janvier 1992 et 1993.

„On line“-Abfrage

Jede Zeitreihe ist durch einen neunstelligen numerischen Kode gekennzeichnet, der seinerseits in Unterkodes gegliedert ist, welche – im Falle von „Eurostatistik“ – das Land, den Sektor, die Tabelle, die Einheit und die Periodizität bezeichnen.
Die Bedeutung der einzelnen Unterkodes ist der nachstehend aufgeführten Tabelle zu entnehmen.

Land XX	Sektor XX	Tabelle XXXX	Periodizität und Einheit X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 21 UEBL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	Variablen Tabellen XXXX vierstelliger Wert, der im Titel jeder Tabelle erscheint	0 jährlich, Angaben in Prozent 1 vierteljährlich, Angaben in Prozent 2 monatlich, Angaben in Prozent 3 jährlich, Indexangaben (1985 = 100) 4 vierteljährlich, Indexangaben (1985 = 100) 5 monatlich, Indexangaben (1985 = 100) 6 jährlich, Angaben in absoluten Werten 7 vierteljährlich, Angaben in absoluten Werten 8 monatlich, Angaben in absoluten Werten 9 Gewicht, EUR 10 = 100 bzw. EUR 12 = 100

* Territoriale Aufteilung vor dem 3. 10. 90: 02 für EUR 12, 12 für D.

Beispiele: Will man die monatliche Arbeitslosigkeit (in absoluten Zahlen) von Frankreich gemäß Tabelle 0304 dieser Veröffentlichung erfahren, so braucht man nur den Kode 14 93 0304 8 einzugeben.

'On-line' consultation

Each time series is identified by a nine-digit code broken down into subcodes, which in the case of Eurostatistics, represent the country, sector, table unit and periodicity. The significance of the different subcodes may be found in the table below.

Country XX	Sector XX	Table XXXX	Periodicity and unit X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 21 UEBL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	Table by indicator XXXX 4-digit value quoted in the title of each table	0 annual 1 quarterly 2 monthly 3 annual 4 quarterly 5 monthly 6 annual 7 quarterly 8 monthly 9 weighting In % In % In % index 1985 = 100 index 1985 = 100 index 1985 = 100 absolute value absolute value absolute value EUR 10 = 100 or EUR 12 = 100

* data for the territorial situation before 3. 10. 90: 02 for EUR 12, 12 for D.

Consultation example: to know the monthly unemployment (absolute figures) of France as is shown in Table 0304 of this publication, the code 14 93 0304 8 should be formed.

Mode de consultation «on-line»

Chaque série chronologique est identifiée par un code à neuf chiffres structuré en sous-codes représentant, dans le cas d'Eurostatistiques, le pays, le secteur, le tableau, l'unité et la périodicité. On trouvera dans le tableau ci-dessous la signification des différents sous-codes.

Pays XX	Secteur XX	Tableau XXXX	Périodicité et unité X
06 EUR 12* 03 EUR 10 11 D* 14 F 16 I 18 NL 21 UEBL 22 B 24 L 26 UK 28 IRL 30 DK 32 E 34 GR 36 P 42 USA 46 JAP	93	Tableaux par variable XXXX valeur à 4 chiffres figurant dans le titre de chaque tableau	0 annuelle 1 trimestrielle 2 mensuelle 3 annuelle 4 trimestrielle 5 mensuelle 6 annuelle 7 trimestrielle 8 mensuelle 9 pondération exprimée en pourcentage exprimée en pourcentage exprimée en pourcentage exprimée en indice 1985 = 100 exprimée en indice 1985 = 100 exprimée en indice 1985 = 100 exprimée en valeur absolue exprimée en valeur absolue exprimée en valeur absolue EUR 10 = 100 ou EUR 12 = 100

* données pour la situation territoriale avant le 3. 10. 90: 02 pour EUR 12, 12 pour D.

Exemple de consultation: pour connaître le chômage mensuel (chiffres absolus) de la France, tel qu'il figure au tableau 0304 de cette publication, il suffit d'appeler le code 14 93 0304 8;
