*Printed in Germany*

Mit der monatlich erscheinenden Veröffentlichung *Eurostatistik - Daten zur Konjunkturanalyse* werden innerhalb kürzester Frist die neuesten statistischen Daten über die Europäische Gemeinschaft als Ganzes (EUR12), über jedes Mitgliedsland sowie über die Vereinigten Staaten und Japan bekanntgegeben.

*Eurostatistik* enthält nicht die Gesamtheit des bei Eurostat verfügbaren statistischen Materials, sondern eine Auswahl der relevantesten Reihen über die konjunkturelle Entwicklung.

Schnelligkeit und Pünktlichkeit sind die wichtigsten Vorzüge dieser Veröffentlichung.

Aus diesem Grunde wurde sie im Umfang bewußt klein gehalten und enthält keine Anmerkungen zur Methodik, die im übrigen in den spezialisierten Veröffentlichungen von Eurostat zu finden sind.

Die in Eurostatistik veröffentlichten Daten stammen aus der Datenbank New Cronos (Hinweise zur On-line -Benutzung finden sich am Ende dieser Veröffentlichung). New Cronos setzt sich zusammen aus dem alten Cronos sowie REGIO und ist nicht mehr in Form von Zeitreihen, sondern in Form von multidimensionalen Tabellen dargestellt. New Cronos ist somit eines der Produkte zur Verbreitung statistischer Daten, das direkt aus der Eurostat - Referenzdatenbank gespeist wird. Darüber hinaus sind die Daten in der Datenbank Eurocron verfügbar, die vom Host Eurobases der Kommission angeboten wird.

**Wechselkurse: Österreichischer Schilling jetzt im Wechselkursmechanismus**

Am 9. Januar 1995 wurde der Österreichische Schilling zum derzeit neunten Mitglied des Wechselkursmechanismus des Europäischen Währungssystems. Sein Leitkurs gegenüber dem Ecu wurde mit 13,7167 festgesetzt, und er hat eine Schwankungsmöglichkeit von 15 % nach beiden Seiten, ähnlich wie andere Währungen im Wechselkursmechanismus. In den letzten Jahren war der Österreichische Schilling praktisch ein Schatten der Deutschen Mark, er schwankte ihr gegenüber seit 1987 nie um mehr als 0,5 %. Von den Währungen der drei neuen Mitgliedstaaten ist der Schilling der einzige, der dem Wechselkursmechanismus beigetreten ist, wengleich die Finnische Mark und die Schwedische Krone Mitglieder im EWS geworden sind, zu dem die Währungen aller EU-Mitgliedstaaten gehören.

Die Spanische Peseta sank gegenüber der Deutschen Mark Anfang Januar auf einen neuen Tiefststand. Ihr Kurs lag am 11. Januar bei 87,85, wobei aber der untere Interventionspunkt im Wechselkursmechanismus (PTA 91,912) noch lange nicht erreicht war. In dem Versuch, ihre Währung zu stützen, intervenierte die Banco de España auf den Devisenmärkten und erhöhte am 4. Januar ihren Referenzzinssatz für kurzfristige Interbankkredite von 7,35 auf 8 %. Die Peseta reagierte nicht unmittelbar auf die Zinssatzerhöhung, doch gegen Ende Januar ließ sie ihre früheren Tiefs hinter sich und erreichte am 26. Januar einen Kurs von PTA 86,93 gegenüber der Deutschen Mark.

Die Italienische Lira geriet in den letzten Wochen auch wieder unter Druck und rutschte gegenüber der Deutschen Mark in neue Tiefen. Anfang Januar fiel sie auf LIT 1 060, doch kam es in den folgenden Wochen wieder zu einer leichten Erholung.

Der Französische Franken und die Dänische Krone zeigten in den letzten Monaten eine leichte Schwäche und bewegten sich außerhalb ihrer früheren engen Bandbreiten im Wechselkursmechanismus. Am 25. Januar hatte der Holländische Gulden weiterhin die beste Position im Raster des Wechselkursmechanismus inne, gefolgt von Deutscher Mark, Belgischem Franken, Österreichischem Schilling, Irischem Pfund, Französischem Franken, Dänischer Krone, Escudo und Peseta.

Der US-Dollar hatte gegenüber den europäischen Währungen in den letzten Wochen Kursverluste zu verzeichnen, besonders gegenüber dem Schweizer Franken und der Deutschen Mark, die im Gefolge der Turbulenzen auf den lateinamerikanischen Finanzmärkten aufgrund der Abwertung des Mexikanischen Peso am 20. Dezember als Fluchtwährungen betrachtet werden. Am 25. Januar schloß der US-Dollar in London bei DM 1,5183, verglichen mit einem Wert von etwa DM 1,57 Mitte Dezember. Gegenüber dem Kanadischen Dollar erreichte er hingegen den höchsten Stand in neun Jahren. Gegenüber dem Yen war das Ergebnis in den letzten Wochen gemischt, da der Yen nach dem Erdbeben in Kobe und dem anschließenden starken Fall der Aktienkurse in Tokio unter einigen Druck geraten war.

**Renditen von Staatsanleihen: Anstieg der Renditen in mehreren Ländern**

Nach dem leichten Nachgeben der Renditen von Staatsanleihen in den letzten Monaten kam es im Dezember in mehreren Ländern zu einer Trendwende; die Renditen stiegen in Dänemark, Deutschland, Spanien, Frankreich und Portugal. Die stärkste Steigerung hatte Dänemark zu verzeichnen, wo die Renditen im Dezember durchschnittlich 9,1 % erreichten und damit zum ersten Mal seit September 1992 über 9 % stiegen.

Das durchschnittliche Niveau der Renditen von Staatsanleihen lag 1994 in 11 der 15 EU-Mitgliedstaaten höher als 1993. Eine Prüfung der Daten läßt erkennen, daß in den EU-Mitgliedstaaten im gegenwärtigen Zyklus die niedrigsten Renditen im Februar 1994 erzielt wurden. Ab März 1994 stiegen sie in den meisten Ländern stetig an. Im Vereinigten Königreich wurde allerdings die Talsohle des Zyklus früher erreicht. Die Renditen stiegen bereits am Ende des dritten Quartals 1993 wieder an.

Ende 1994 verzeichnete Luxemburg die niedrigsten Renditen von Staatsanleihen in der EU, gefolgt von Österreich, Deutschland, den Niederlanden und Belgien. Am höchsten waren die Renditen in Spanien und Portugal, nämlich fast fünf Prozentpunkte höher als in Luxemburg. Die Renditen in Deutschland lagen am Jahresende um mehr als 0,5 % unter denen der Vereinigten Staaten, und in Japan lagen die Renditen weit niedriger als in allen anderen Ländern, in denen sie erfaßt wurden.

**Geldvolumen: Deutsches Geldmengenwachstum innerhalb des Zielkorridors der Bundesbank**

Die auf Jahresbasis umgerechnete deutsche M3-Wachstumsrate belief sich bis November 1994 auf 4,75 % und lag zum ersten Mal innerhalb des von der Bundesbank für 1994 festgesetzten Zielkorridors von 4 bis 6 %. Dies kann mit Wachstumsraten von weit über 10 % in den ersten Monaten des Jahres verglichen werden. Die Verlangsamung des Wachstums kann auf Verschiebungen von den kurzfristigen Einlagen, deren Zinssätze in der zweiten Jahreshälfte gesunken sind, hin zu längerfristigen Einlagen und seit August 1993 auch zu Geldmarkt-Investmentfonds zurückgeführt werden, die kein Bestandteil von M3 im herkömmlichen Sinne sind.

Im Oktober kehrte die ALP-Wachstumsrate in Spanien in den von der Banco de España vorgegebenen Zielkorridor 1994 von 4,5 bis 7,5 % zurück, nachdem sie mehrere Monate lang etwas höher gelegen hatte.

**Amtliche Währungsreserven: Japans Reserven weiter steigend**

Im November überstiegen die amtlichen Währungsreserven Japans 100 Mio. ECU (125 Mio. US-Dollar) und erreichten damit den höchsten Stand aller Zeiten, wobei sie 1994 um etwa 16 % angewachsen waren. Die japanische Währung blieb 1994 stark, besonders gegenüber dem US-Dollar, und die Bank von Japan intervenierte in dem Bestreben, die US-Währung zu stärken.

Italien hatte im November einen weiteren Abfluß seiner Reserven zu verzeichnen, womit sich ein während des gesamten Jahres 1994 festzustellender Trend fortsetzte. Ende November betrug der Rückgang der italienischen Währungsreserven 1994 mehr als 13 %, und damit erreichten sie den niedrigsten Stand seit Mai 1993. Dieser Abfluß der Währungsreserven fiel mit einer anhaltenden Schwäche der Italienischen Lira zusammen.

**EU-INFLATIONSRATE IM DEZEMBER AUF 3,1 % GESTIEGEN**

Die jährliche Inflationsrate der EU, gemessen am Verbraucherpreisindex, ist im Dezember leicht auf 3,1 % gestiegen. Drei Monate lang hatte sie mit 3 % den niedrigsten Stand seit siebeneinhalb Jahren. Mittlerweile hat die Teuerungsrate wieder das Niveau der Monate Juli und August erreicht. Die Inflationsrate sinkt seit fünf Jahre kontinuierlich ab. Im Dezember 1993 lag sie bei 3,4 %, 1992 bei 3,6 %, 1991 bei 4,7 % und 1990 bei 5,7 %.

Nach den Zahlen, die von EUROSTAT, dem Statistischen Amt der EG in Luxemburg, bekanntgegeben wurden, hat noch immer FRANKREICH mit 1,6 % die niedrigste Rate aller EU-Länder. PORTUGAL, ITALIEN, SPANIEN und GRIECHENLAND sind die einzigen Länder, die über dem EU-Durchschnitt liegen. Das VEREINIGTE KÖNIGREICH ist nach einem Anstieg von 2,6 % im November auf 2,9 % im Dezember aber nur noch knapp darunter.

Für die Inflationsraten der Mitgliedsländer im Dezember — mit entsprechenden Vorjahreszahlen — ergibt sich folgende ansteigende Reihenfolge:

	Dez. 94 Dez. 93	Dez. 93 Dez. 92	Dez. 94 Dez. 93	Dez. 93 Dez. 92
FRANKREICH	1,6 %	2,1 %	DEUTSCHLAND **	2,7 % 3,7 %
BELGIEN	1,9 %	2,7 %	VER. KÖNIGREICH	2,9 % 1,9 %
LUXEMBURG	2,0 %	3,6 %	PORTUGAL	4,0 % 6,4 %
DÄNEMARK	2,3 %	1,5 %	ITALIEN	4,2 % p 4,3 %
IRLAND *	2,4 %	1,4 %	SPANIEN	4,3 % 5,0 %
NIEDERLANDE	2,6 %	2,6 %	GRIECHENLAND	10,8 % 12,1 %
EU	3,1 % p			

\* November 94 / November 93 und November 93 / November 92

\*\* Der Verbraucherpreisindex für die Bundesrepublik Deutschland bezieht sich weiterhin auf den Gebietsstand vor dem 3.10.90

p Vorläufig

Die Inflationsraten in einigen anderen Staaten: USA 2,7 % (2,8 %), JAPAN 0,5 % (1 %), KANADA 0,2 % (1,7 %), NORWEGEN 1,9 % (1,8 %) und SCHWEIZ 0,4 % (2,4 %).

### Die Teuerung in den neuen Mitgliedsländern

Die neuen EU-Mitgliedsländer hatten alle Inflationsraten unter dem EU-Durchschnitt: ÖSTERREICH 2,6 % (3,5 %), FINNLAND 1,6 % (1,6 %), und SCHWEDEN 2,5 % (4 %).

Die Teuerung hat sich in den neuen Mitgliedsländern in den letzten 15 Jahren ähnlich entwickelt wie bei den zwölf anderen EU-Mitgliedern. Unmittelbar nach der zweiten Ölkrise in 1979/80 erreichten die Inflationsraten dieser Länder einen Höhepunkt.

Von 1981 an sanken sie kontinuierlich ab, um dann 1986 ihr niedrigstes Niveau zu erreichen. Von 1987 bis 1990 nahm die Teuerung wieder zu und erreichte während der Golfkrise einen weiteren Höchststand, um anschließend erneut abzusinken.

Im Zeitraum vom Dezember 1990 bis Dezember 1994 stieg der Verbraucherpreisindex in FINNLAND um 12 %, in ÖSTERREICH um 15 % und in SCHWEDEN um 21 %. Der EU-Durchschnitt lag im Vergleich dazu bei 18 %.

### EU-Arbeitslosenquote im Dezember bei 10,8 %

EUROSTAT, das Statistische Amt der EG in Luxemburg, schätzt die saisonbereinigte Arbeitslosenquote der EU\* für Dezember '94 auf 10,8 %.

Damit ist die Rate gegenüber dem revidierten Wert des Vormonats von 10,9 % leicht gefallen. Nach Revisionen ergab sich auch für die Monate August, September und Oktober eine Arbeitslosenquote von 10,9 %. Die jüngsten Zahlen lassen in der Jahresmitte '94 einen Höhepunkt der Rate von 11 % erkennen, nachdem sie vier Jahre lang kontinuierlich angestiegen war.

Im Jahresdurchschnitt 1994 belief sich die Arbeitslosenquote in der Union auf 10,9 %, verglichen mit einem Wert von 10,5 % im Vorjahr.

Nach den Schätzungen von EUROSTAT waren im Dezember EU-weit etwa 17 Millionen Menschen arbeitslos. Dabei handelt es sich um eine saisonbereinigte Zahl, die sich an den Kriterien der Internationalen Arbeitsorganisation (ILO) orientiert.

Die größten Rückgänge im Vorjahresvergleich wurden im VEREINIGTEN KÖNIGREICH (von 10 % auf 8,9 %, Dez. 93/Dez. 94), in DÄNEMARK (von 10,4 % auf 9,3 %) und in IRLAND (von 18,4 % auf 17,6 %) verzeichnet. In ITALIEN stieg die Arbeitslosenquote am deutlichsten an (von 11,3 % auf 12,2 %).

### Anmerkungen

Die Arbeitslosenquote und die Zahl der Arbeitslosen werden nach den Empfehlungen der ILO geschätzt. Die unterschiedlichen nationalen Methoden zur Erfassung der Arbeitslosigkeit werden dabei weitgehend ausgeschaltet.

Die Arbeitslosenquote wird geschätzt durch Extrapolation der 1991er Ergebnisse der EU-Arbeitskräfteerhebung in allen Mitgliedstaaten. Die Einbeziehung der Ergebnisse der nachfolgenden Jahre, sobald verfügbar, wird wahrscheinlich zu Revisionen der Schätzungen führen, wird die jüngste Entwicklung aber nicht beeinflussen. Die Einbeziehung der vierteljährlichen Ergebnisse der EU-Arbeitskräfteerhebung im Vereinigten Königreich und in Spanien haben zu einer merklichen Revision der früher veröffentlichten Daten geführt.

### INDUSTRIEPRODUKTION

In den Monaten September bis November 94 ist die Industrieproduktion in den zwölf Mitgliedstaaten der EU gegenüber den vorhergehenden drei Monaten saisonbereinigt um 0,3 % gestiegen. Dies geht aus Zahlen von EUROSTAT, dem Statistischen Amt der EG in Luxemburg, hervor.

In JAPAN hatte sich der industrielle Output in diesem Zeitraum um 2,6 % und in den USA um 1 % erhöht.

### Industrieproduktion der EU stieg 1994 um 5 Prozent

Die Jahreswachstumsraten der Industrieproduktion (1994 im Vergleich mit 1993) können nunmehr geschätzt werden. Demnach waren in allen Mitgliedstaaten die Veränderungsraten positiv, während in Vorjahr (1993 gegenüber 1992) häufig noch eine deutlich sinkende Industrieproduktion zu verzeichnen war. Die Zahlen im einzelnen (Veränderungsrate 1993 in Klammern): EU +5,2 % (-3,2 %), Dänemark +10,8 % (-2,9 %), Deutschland +3,5 % (-7,7 %), Griechenland +1,6 % (-3,0 %), Spanien +7,0 % (-4,8 %), Frankreich +3,2 % (-2,8 %), Irland +11,2 % (+5,7 %), Italien +6,1 % (-2,1 %), Luxemburg +7,5 % (-3,0 %), die Niederlande +2,2 %

(-1,1 %), Österreich +2,9 % (-2,0 %), Portugal +0,3 % (-4,4 %), Finnland +11,5 % (+5,1 %), Schweden +9,7 % (+2,6 %), das Vereinigte Königreich +5,3 % (+2,1 %), USA +5,4 % (+4,1 %), Japan +0,1 % (-4,1 %). Für Belgien kann noch keine Schätzung vorgenommen werden.

Betrachtet man die letzten verfügbaren monatlichen Daten der Industrieproduktion in der EU 1994, so stellt man fest, daß der Konjunkturaufschwung eher verhalten verläuft: Saisonbereinigt war der EU-Produktionsindex im August bei 101,1, im September bei 100,4 und in Oktober bei 100,1.

Im Dreimonatsvergleich (August bis Oktober im Vergleich zu Mai bis Juli) ergibt sich eine Wachstumsrate der EU von +1,1 %. In den Mitgliedsstaaten (soweit verfügbar) liegt Dänemark bei -3,5 %, Deutschland bei +0,4 %, Griechenland bei -0,9 %, Spanien bei +2,5 %, Frankreich bei +1,3 %, Italien bei +2,6 %, die Niederlande bei +0,7 % (geschätzt), Portugal +2,2 %, das Vereinigte Königreich bei +0,8 %.

### AUSSENHANDEL

#### EU HANDELSBILANZDEFIZIT VERRINGERT SICH

Die Zahlen, die von EUROSTAT, dem Statistischen Amt der Europäischen Gemeinschaften in Luxemburg, herausgegeben wurden, zeigen einen Rückgang des EU Handelsdefizits mit Ländern außerhalb der EU um 6,3 Mrd. ECU im ersten Halbjahr 1994 verglichen mit dem gleichen Zeitraum im vorigen Jahr.

Die Importe in die EU sind um 10,7 % und die Exporte um 13,8 % angestiegen.

Die Zahlen für den Handel innerhalb des EU Binnenmarktes bestätigen die offensichtliche Erholung: im ersten Halbjahr 1994 betrug der Anstieg nahezu 9 %.

#### EXTRA EU-HANDEL 1993/94

Die EU-Exporte in Drittländer nahmen im ersten Halbjahr 1994 um 13,8 % zu. Dieser Anstieg war besonders stark in Belgien/Luxemburg (27,1 %) und in Irland (22,4 %). Nach einer Stagnation in 1993, sind in der Zeit zwischen dem ersten Halbjahr 1993 und dem ersten Halbjahr 1994 die EU-Importe von Drittländern um 10,7 % gestiegen. Was die Exporte angeht, hatten Belgien/Luxemburg und Irland, sowie die Niederlande eine stärker ansteigende Tendenz als die anderen Mitgliedstaaten zu verzeichnen.

Das EU Handelsdefizit mit Drittländern hat sich im ersten Halbjahr 1994 auf 3 Mrd. ECU verringert, im Vergleich zu 9,3 Mrd. des gleichen Zeitraums 1993.

#### INTRA EU-HANDEL 1993/94

Im Intra EU-Handel gab es auch 1994 eine Diskrepanz zwischen den „Versendungen“ — Exporte in andere EU-Länder — und den „Eingängen“ — Importe aus anderen EU-Ländern —, die sich auf 5 % belief. Theoretisch sollten die beiden Gesamtwerte ungefähr gleich sein. EUROSTAT vertritt die Ansicht, daß die „Versendungen“ derzeit die verlässlicheren Ergebnisse aufgrund der höheren Antwortrate der Firmen, die diese Daten liefern, sind. Dennoch unterscheiden sich die Wachstumsraten der beiden Warenströme im Zeitraum zwischen dem ersten Halbjahr 1993 und dem ersten Halbjahr 1994 nur geringfügig: Versendungen 9,4 %, Eingänge 8,3 %.

Die vierteljährlichen Wachstumsraten zeigen einen beschleunigten Anstieg des Intra EU-Handels für 1994. Die Versendungen stiegen um 7,6 % im ersten Quartal und um 11,3 % im zweiten Quartal im Vergleich zu den entsprechenden Zeiträumen in 1993. Allgemein wurde dieser beträchtliche Anstieg der Intra EU-Warenströme in allen Ländern verzeichnet, mit Ausnahme von Griechenland (beide Richtungen) und Portugal (Eingänge).

### Anmerkungen

1. INTRASTAT wurde am 1. Januar 1993 infolge der Abschaffung der Zollkontrollen in der EU eingeführt. Die Handelsdaten werden nicht länger von Zollanmeldungen abgeleitet, sondern jetzt aus Angaben zusammengestellt, die direkt von den Unternehmen geliefert werden, wodurch Probleme des Antwortausfalls auftreten. Größere Verzögerungen bei der Erstellung der Statistiken des innergemeinschaftlichen Handels sind in der Vergangenheit entstanden und bestehen in einigen Mitgliedstaaten weiterhin.

2. Die Intra-EU Handelszahlen sollten wegen der Antwortausfälle mit Vorsicht gehandhabt werden. Sie unterliegen häufigen Änderungen.

\* EU 12

*Eurostatistics - data for short-term economic analysis* is a monthly publication aimed at providing, as rapidly as possible, the latest statistical data on the European Community as a whole (EUR12), each Member State, the United States and Japan.

*Eurostatistics* does not present all the statistics held by Eurostat, but a selection of the most relevant series on the economic situation.

Speed of publication and punctuality are the main features of this publication; that is why it is deliberately streamlined and does not contain any methodological notes, which are given in Eurostat's specialized publications.

The data published in *Eurostatistics* are taken from Eurostat's on-line database, New Cronos (instructions regarding on-line consultation may be found at the end of this publication). New Cronos includes old Cronos and Regio, both represented not by chronological series but through multi-dimensional tables. New Cronos is a dissemination product directly from Eurostat's Reference Environment. The data are also available via the Commission host Eurobases in the Eurocron database.

Further information on Eurostat and its products can be obtained from the following addresses:

**EXCHANGE RATES: Austrian schilling joins the ERM**

On January 9 1995 the Austrian schilling became the ninth current member of the exchange rate mechanism (ERM) of the European Monetary System. Its central rate against the ecu was fixed at 13.7167, and it is able to fluctuate by 15% either side of its central rate, similar margins to other ERM currencies. In fact, it has been virtually shadowing the Deutschemerk in recent years, not fluctuating by more than 0.5% against it since 1987. The schilling is the only one of the currencies of the three new Member States to join the ERM, although the Finnish markka and Swedish krone have joined the EMS, to which all EU Member States' currencies belong.

The Spanish peseta fell to new lows against the Deutschemerk in early January, touching PTA 87.85 on January 11. It remains well above its ERM floor however, which stands at PTA 91.912. In an attempt to lend support to its currency, the Banco de Espaa intervened in the currency markets and on January 4 raised its benchmark interest rate, that on short-term credit to banks, from 7.35 to 8%. The peseta did not initially strengthen in response to the increase in rates, but later in January rose above its earlier lows, to stand at PTA 86.93 against the mark on January 26.

The Italian lire has also come under further pressure in recent weeks, falling to more new lows against the mark. It fell to LIT 1060 in early January, but strengthened slightly in the following weeks.

The French franc and Danish krone have weakened slightly in recent months, moving outside their former ERM narrow bands. On January 25 the Dutch guilder remained at the top of the ERM grid, followed by the Deutschemerk, Belgian franc, schilling, punt, French franc, Danish krone, escudo and the peseta.

The US dollar has weakened against European currencies in recent weeks, especially against the Swiss franc and the mark, which are considered as safe haven currencies, in the aftermath of the turbulence surrounding Latin American financial markets, which had its origins with the devaluation of the Mexican peso on December 20. On January 25 the dollar closed in London at DM 1.5183, compared to its value in mid-December of around DM 1.57. However, it has been trading at nine-year highs against the Canadian dollar. Against the yen its performance in recent weeks has been mixed, with the yen coming under some pressure after the earthquake in Kobe and the subsequent large fall in share prices in Tokyo.

**GOVERNMENT BOND YIELDS: rise in bond yields in several countries**

The slight easing in the yield on government bonds which has been seen in recent months was reversed in several countries in December, when yields rose in Denmark, Germany, Spain, France and Portugal. The largest increase occurred in Denmark, where yields averaged 9.1% in December, the first time that they have averaged over 9% since September 1992.

The average level of government bond yields in 1994 was higher than that in 1993 in 11 out of the 15 EU Member States. Examination of the data indicates that for EU members the lowest levels of yields in the present cycle were reached in February 1994; from March 1994 onwards yields rose steadily in most countries. However, in the United States the trough of the cycle was reached earlier: yields started to rise at the end of the third quarter of 1993.

At the end of 1994 Luxembourg had the lowest government bond yield in the EU, followed by Austria, Germany, Netherlands and Belgium. Yields were highest in Spain and Portugal, almost five percentage points higher than those of Luxembourg. Germany's yields ended the year over 0.5% below those of the United States, although Japan's were far lower than those of any other country surveyed.

**MONEY SUPPLY: German monetary growth within Bundesbank's target**

The annualised growth rate of German M3 was 4.75% in the year to November 1994, within the Bundesbank's 1994 target range of 4-6% for the first time. This can be compared to growth rates of well over 10% in the first months of the year. The slowdown in growth can be attributed to

shifts out of short-term time deposits, the interest rate on which was falling over the second half of the year, into longer-term savings and since August 1993 also into money market funds, which are not a component of M3 as it is traditionally measured.

In Spain, ALP growth returned to within the Banco de Espaa's 1994 target range of 4.5-7.5% growth in October, following several months when it grew at somewhat faster rates.

**FOREIGN OFFICIAL RESERVES: Japan's reserve continue to rise**

In November Japan's foreign official reserves exceeded 100 million ecu (US\$125m), their highest ever level, having risen by around 16% in 1994. Japan's currency has been strong during 1994, especially against the US dollar, and intervention has been carried out by the Bank of Japan with the intention of strengthening the US currency.

Italy experienced a further outflow of reserves in November, a continuation of a trend which has occurred throughout 1994. By the end of November its reserves had fallen by over 13% in 1994, to stand at their lowest level since May 1993. These falls in reserves have coincided with prolonged weakness of the Italian lire.

**EU ANNUAL INFLATION rises to 3.1% in december**

EU annual inflation – as measured by the Consumer Price Index (CPI) – rose slightly to 3.1% in December. This is back to the level of last July and August after three months at 3%, which was the lowest for seven-and-a-half years.

The rate has fallen steadily now for five years: in December 1993 it was 3.4%, in '92 3.6%, '91 4.7% and '90 5.7%.

FRANCE still has the lowest rate, 1.6%. Only PORTUGAL, ITALY, SPAIN, and GREECE are above the EU average. However, after a rise from 2.6% in November, the UNITED KINGDOM, at 2.9%, is now close.

The December rates in Member States, in ascending order of inflation, with corresponding figures for a year earlier, are:

	Dec. 94 Dec 93	Dec 93 Dec 92		Dec 94 Dec 93	Dec 93 Dec 92
FRANCE	1.6%	2.1%	GERMANY **	2.7%	3.7%
BELGIUM	1.9%	2.7%	UNITED KINGDOM	2.9%	1.9%
LUXEMBOURG	2.0%	3.6%	PORTUGAL	4.0%	6.4%
DENMARK	2.3%	1.5%	ITALY	4.2% p	4.3%
IRELAND *	2.4%	1.4%	SPAIN	4.3%	5.0%
NETHERLANDS	2.6%	2.6%	GREECE	10.8%	12.1%
EU	3.1% p				

\* November 94 / November 93 and November 93 / November 92

\*\* The CPI for Germany continues to reflect the geographical borders prior to 3 October 1990

p Provisional

Corresponding rates in some other non-EU countries were: UNITED STATES 2.7% (2.8%), JAPAN 0.5% (1%), CANADA 0.2% (1.7%), NORWAY 1.9% (1.8%) and SWITZERLAND 0.4% (2.4%).

**Inflation in new Member States**

Corresponding rates in the new Member States (all below the EU average) were: AUSTRIA 2.6% (3.5%), FINLAND 1.6% (1.6%) and SWEDEN 2.5% (4%).

Over the last 15 years the inflation trend in the new Member States has been similar to that of the Twelve. They peaked just after the second oil crisis in 1979/80. From 1981 they declined, reaching their lowest in 1986. From 1987 to 1990 they rose again to peak during the Gulf crisis, falling thereafter.

Between December 1990 and December 1994 consumer prices increased by 12% in FINLAND, 15% in AUSTRIA and 21% in SWEDEN while the EUR-12 average rise was 18%.

## EU UNEMPLOYMENT: 10.8% in December

Figures from EUROSTAT – the EC statistical office in Luxembourg – estimate EU\* seasonally-adjusted unemployment last December at 10.8%.

Following a series of revisions this is down on November's 10.9%. Revisions also now indicate a rate of 10.9% in August, September and October. The latest figures show a peak of 11% in mid-'94 after four years' continuous increase.

Average annual EU\* unemployment in 1994 is estimated at 10.9%. This compares with 10.5% in 1993.

EUROSTAT estimates that around 17 million people were unemployed in the EU in December – a seasonally-adjusted figure in line with International Labour Organisation (ILO) criteria.

Biggest falls over the last year have been in the UNITED KINGDOM (10% to 8.9% Dec 93/Dec 94), DENMARK (10.4% to 9.3%) and IRELAND (18.4% to 17.6%). Biggest rise was in ITALY (11.3% to 12.2%).

### Notes

The unemployment rate and numbers of unemployed are estimated according to ILO recommendations after taking account of the differences between national methods of recording unemployment.

The unemployment rate is estimated by extrapolating the 1991 results of the labour force surveys for all Member States. Introduction of subsequent results, when available, will probably lead to a revision of the estimates, but this will not affect recent trends. The results of the quarterly labour force surveys are now being used for the United Kingdom and for Spain which has caused a significant revision of the results previously published.

## INDUSTRIAL PRODUCTION

EU 12 industrial production, seasonally adjusted, rose by 0.3% in September to November last year compared to the three previous months.

In comparison output in JAPAN was up 2.6% and in the USA 1%.

### EU industrial output up 5% in 1994

The annual growth rates for industrial output (1994 over 1993) can now be estimated. Trends were positive in all Member States, in contrast to the previous year (1993 over 1992), when the overall trend in industrial output was still clearly negative. Detailed figures (1993 figures in brackets) are as follows: EU +5.2% (-3.2%), Denmark +10.8% (-2.9%), Germany +3.5% (-7.7%), Greece +1.6% (-3.0%), Spain +7.0% (-4.8%), France +3.2% (-2.8%), Ireland +11.2% (+5.7%), Italy +6.1% (-2.1%), Luxembourg +7.5% (-3.0%), the Netherlands +2.2% (-1.1%), Austria +2.9% (-2.0%), Portugal +0.3% (-4.4%), Finland +11.5% (+5.1%), Sweden +9.7% (+2.6%), the United Kingdom +5.3% (+2.1%), USA +5.4% (+4.1%), Japan +0.1% (-4.1%). An estimate cannot yet be given for Belgium.

The latest available monthly data for industrial output for 1994 in the EU point to a modest economic recovery. The EU's seasonally adjusted production index was 101.1 in August, 100.4 in September and 100.1 in October.

A comparison of the three-month period August to October and May to July shows an EU growth rate of +1.1%. Figures for individual Member States (where available) are as follows: Denmark -3.5%, Germany +0.4%, Greece -0.9%, Spain +2.5%, France +1.3%, Italy +2.6%, the Netherlands +0.7% (estimate), Portugal +2.2% and the United Kingdom +0.8%.

## EXTERNAL TRADE

### EU TRADE GAP NARROWS

Figures from EUROSTAT – the EC statistical office in Luxembourg – show a 6.3 billion ECU fall in the EU trade deficit with the rest of the world in the first six months of 1994 compared to the same period the year before.

There was a 10.7% rise in imports to the EU and a 13.8% surge in exports.

Figures on trade within the EU single market confirm the impression of recovery: for the first half of 1994, the growth is near 9%.

### EXTRA-EU TRADE 1993/94

EU exports to the rest of the world rose by 13.8% during the first half of 1994. This increase was particularly strong in Belgium/Luxembourg (27.1%) and Ireland (22.4%). After stagnating in 1993, EU imports from the rest of the world increased by 10.7% between the first six months of 93 and 94. As in exports, Belgium/Luxembourg and Ireland, as well as the Netherlands, had an upward trend for imports more pronounced than in other Member States.

The EU's trade deficit with the rest of the world narrowed to 3 billion ECU in the first half of 1994 from 9.3 billion in the corresponding period of 1993.

### INTRA-EU TRADE 1993/94

In intra-EU trade, a discrepancy between 'dispatches' – exports to other EU countries – and 'arrivals' – imports from other EU countries – still existed in 1994 and amounted to 5%. In theory, the totals of both should be around the same level. Indeed, EUROSTAT believes dispatches are now the more reliable measure because of the higher response level from companies in providing data. Nevertheless, the growth rates of both flows between first half 1993 and first half 1994 differ only slightly: dispatches 9.4%, arrivals 8.3%.

Quarterly rates of growth show some acceleration of intra-EU trade during 1994. Dispatches were up 7.6% for the first quarter and 11.3% for the second quarter compared to the corresponding periods of 1993. In general this marked increase of intra-EU flows was recorded in all countries, except for Greece (both flows) and Portugal (arrivals).

### Background notes

1. INTRASTAT began on 1 January 1993 following the abolition of customs controls in the EU. Instead of deriving from customs declarations, trade figures are now compiled from data provided directly by companies, with some problems of non-response. Increased delays in establishing intra-EU trade statistics occurred and still exist in some Member States.

2. Because of non-response, intra-EU trade figures should be treated with particular caution. They are subject to frequent revisions.

\* EU 12

*Eurostatistiques - Données pour l'analyse de la conjoncture* est une publication mensuelle qui a pour but de fournir dans les meilleurs délais les données statistiques les plus récentes pour la Communauté européenne en tant qu'ensemble (EUR12), pour les pays membres ainsi que pour leurs principaux partenaires extra-communautaires (États-Unis d'Amérique et Japon).

*Eurostatistiques* ne publie pas d'une manière exhaustive toutes les statistiques disponibles auprès d'Eurostat, mais les plus importantes parmi celles-ci.

Cette publication se veut rapide et facilement maniable. Pour cette raison, elle ne comporte pas de notes méthodologiques, qui sont par ailleurs disponibles dans les publications spécialisées d'Eurostat.

Les données publiées dans *Eurostatistiques* proviennent de la base de données New Cronos (les instructions pour le mode de consultation on-line se trouvent à la fin de cette publication). New Cronos se compose de l'ancien Cronos et de Regio, représentés non plus sous forme de séries chronologiques mais de tableaux multidimensionnels. New Cronos constitue en fait un des produits de diffusion émanant directement de l'environnement de Référence. Ces données sont aussi disponibles dans la base de données Eurocron, accessible par l'intermédiaire du serveur Eurobases de la Commission.

**TAUX DE CHANGE: Le shilling autrichien entre dans le MTC**

Le 9 janvier 1995, le shilling autrichien est effectivement devenu la neuvième monnaie du mécanisme de taux de change (MTC) du Système monétaire européen. Son taux central contre l'écu a été fixé à 13,7167 avec une marge de fluctuation de 15 % dans les deux sens, comme pour les autres monnaies du MTC. En fait, le shilling autrichien a pratiquement suivi le deutsche mark à la trace ces dernières années, l'écart de fluctuation contre ce dernier n'excédant pas 0,5 % depuis 1987. Le shilling est la seule monnaie parmi celles des nouveaux États membres à entrer dans le MTC, bien que le markka finlandais et la couronne suédoise soient entrés dans le Système monétaire européen auquel appartiennent toutes les monnaies des États membres de l'UE.

La peseta espagnole est tombée à de nouveaux bas contre le deutsche mark au début janvier, touchant le point PTA 87,85 le 11 janvier. Cependant, elle reste très nettement au-dessus de son cours plancher MTC qui s'établit à PTA 91,912. Pour tenter de soutenir sa monnaie, la banque d'Espagne est intervenue sur les marchés des devises et a relevé son taux de référence le 4 janvier – celui des crédits à court terme aux banques – de 7,35 à 8 %. La peseta ne s'est pas tout de suite raffermie en réponse à la hausse des taux, mais a remonté courant janvier au-dessus de ses bas précédents, pour s'établir à PTA 86,93 contre le mark le 26 janvier.

La lire italienne a aussi été l'objet de nouvelles pressions au cours des dernières semaines, atteignant de nouveaux bas contre le mark. Elle est tombée à LIT 1060 début janvier, mais s'est légèrement raffermie au cours des semaines suivantes.

Le franc français et la couronne danoise ont légèrement faibli au cours des derniers mois, en débordant des étroits couloirs qu'ils suivaient précédemment dans le MTC. Le 25 janvier, le florin néerlandais est resté au sommet de la grille du MTC suivi par le deutsche mark, le franc belge, le shilling, la livre irlandaise, le franc français, la couronne danoise, l'escudo et la peseta.

Le dollar US s'est affaibli contre les monnaies européennes au cours des dernières semaines, notamment contre le franc suisse et contre le mark qui sont considérés comme des monnaies refuges à la suite des turbulences provoquées sur les marchés financiers latino-américains par la dévaluation du peso mexicain le 20 décembre. Le 25 janvier, le dollar a clôturé à Londres à DM 1,5183 alors que l'on cotait environ 1,57 à la mi-décembre. Cependant, contre le dollar canadien, il s'est traité à des sommets jamais atteints depuis neuf ans. Contre le yen, ses performances ont été mitigées ces dernières semaines du fait des pressions exercées sur la monnaie japonaise à la suite du tremblement de terre de Kobe et de la forte chute subséquente sur les prix des actions à Tokyo.

**RENDEMENTS DES OBLIGATIONS D'ÉTAT: hausse dans plusieurs pays**

La tendance à une légère détente sur le rendement des obligations d'État que l'on avait observée au cours des derniers mois, s'est inversée dans plusieurs pays en décembre lorsque les taux sont repartis à la hausse au Danemark, Allemagne, Espagne, France et Portugal. La plus forte de ces hausses s'est produite au Danemark où les rendements ont atteint en moyenne 9,1 % en décembre, dépassant les 9 % pour la première fois depuis septembre 1992.

Le niveau moyen des rendements des obligations d'État en 1994 était supérieur à celui de 1993 dans 11 des 15 États membres de l'UE. L'examen des données montre que pour les membres de l'UE, les niveaux les plus bas des rendements dans le cycle actuel ont été atteints en février 1994; à partir de mars 1994, les taux se sont raffermis dans la plupart des pays. Cependant, aux États-Unis, le creux de la vague a été atteint plus tôt: les rendements ont commencé à remonter à la fin du troisième trimestre de 1993.

À la fin de 1994, le Luxembourg avait le rendement d'obligations d'État le plus bas de l'UE, suivi par l'Autriche, l'Allemagne, les Pays-Bas et la Belgique. Les rendements étaient les plus élevés en Espagne et au Portugal, près de 5 points de pourcentage supérieurs à ceux du Luxembourg. Les rendements de l'Allemagne ont terminé l'année à plus de 0,5 % au-dessous de ceux des États-Unis, le record revenant au Japon avec des chiffres nettement inférieurs à ceux de n'importe quel autre pays sous revue.

**MASSE MONÉTAIRE: la croissance monétaire de l'Allemagne à l'intérieur de l'objectif de la Bundesbank**

Le taux de croissance annualisé du M3 allemand était de 4,75 % pour les douze mois se terminant en novembre 1994, pour la première fois à l'intérieur de la fourchette de 4-6 % fixée pour 1994 par la Bundesbank. Ce résultat est à comparer avec les taux de croissance nettement supérieurs à 10 % des premiers mois de l'année. Cette décade peut être attribuée à des déplacements de dépôts à court terme dont le taux d'intérêt a baissé au cours de la deuxième moitié de l'année, vers l'épargne à long terme et aussi, depuis août 1993, vers les fonds du marché monétaire qui n'entrent pas dans M3 tel qu'on le mesure traditionnellement.

En Espagne, le taux de croissance d'ALP est revenu en octobre à l'intérieur de la fourchette de 4,5-7,5 % fixée pour 1994 par la banque d'Espagne, après avoir été nettement plus rapide pendant plusieurs mois.

**RÉSERVES OFFICIELLES SUR L'ÉTRANGER: les réserves du Japon continuent de s'accroître**

En novembre, les réserves officielles sur l'étranger du Japon dépassaient de 100 millions d'écus (US \$ 125 m) leur plus haut niveau jamais atteint, ce qui correspond à une hausse d'environ 16 % en 1994. La devise japonaise s'est montrée forte en 1994, en particulier contre le dollar US, et la banque du Japon est intervenue pour soutenir la monnaie US.

L'Italie a connu un nouvel exode de ses réserves en novembre, une tendance qui ne s'est pas démentie tout au long de 1994. À la fin de novembre, ses réserves marquaient une baisse de plus de 13 % pour 1994 pour s'établir à leur plus bas niveau depuis mai 1993. Ces baisses des réserves ont coïncidé avec la faiblesse prolongée de la lire italienne.

**L'INFLATION ANNUELLE DANS L'UE EN HAUSSE: 3,1 % en décembre**

L'inflation annuelle dans l'UE, mesurée par l'Indice des Prix à la Consommation (IPC), a augmenté légèrement pour atteindre 3,1 % en décembre. Ainsi, après s'être maintenue à 3 % pendant trois mois, taux le plus bas depuis sept ans et demi, l'inflation se retrouve au niveau de juillet et août 1994.

Le taux a régressé de façon constante depuis cinq ans maintenant: En décembre, il s'élevait à 3,4 % en 1993, 3,6 % en 1992, 4,7 % en 1991 et 5,7 % en 1990.

La FRANCE enregistre encore le taux le plus bas avec 1,6 %. Le PORTUGAL, l'ITALIE, l'ESPAGNE et la GRECE sont les seuls pays se situant au-dessus de la moyenne de l'UE. Toutefois, le ROYAUME-UNI, qui a vu son taux passer de 2,6 % en novembre à 2,9 % en décembre, se trouve maintenant proche de cette moyenne.

Voici les taux enregistrés en décembre, classés par ordre croissant, pour chaque Etat membre ainsi que les chiffres correspondants pour l'année précédente:

	déc. 94 déc. 93	déc. 93 déc. 92		déc. 94 déc. 93	déc. 93 déc. 92
FRANCE	1,6 %	2,1 %	ALLEMAGNE **	2,7 %	3,7 %
BELGIQUE	1,9 %	2,7 %	ROYAUME-UNI	2,9 %	1,9 %
LUXEMBOURG	2,0 %	3,6 %	PORTUGAL	4,0 %	6,4 %
DANEMARK	2,3 %	1,5 %	ITALIE	4,2 % p	4,3 %
IRLANDE *	2,4 %	1,4 %	ESPAGNE	4,3 %	5,0 %
PAYS-BAS	2,6 %	2,6 %	GRECE	10,8 %	12,1 %
UE	3,1 % p				

\* novembre 94 / novembre 93 et novembre 93 / novembre 92  
 \*\* L'IPC pour l'Allemagne continue de refléter les frontières d'avant le 3 octobre 1990  
 p Provisoire

Voici les taux correspondants pour quelques autres pays non membres de l'UE: ETATS-UNIS 2,7 % (2,8 %), JAPON 0,5 % (1 %), CANADA 0,2 % (1,7 %), NORVEGE 1,9 % (1,8 %) et SUISSE 0,4 % (2,4 %).

**L'inflation dans les nouveaux Etats membres**

Les taux correspondants pour les nouveaux Etats membres sont les suivants: AUTRICHE 2,6 % (3,5 %), FINLANDE 1,6 % (1,6 %) et SUEDE 2,5 % (4 %). Ils se situent donc tous en-dessous de la moyenne de l'UE.

Au cours de ces quinze dernières années, la tendance suivie par l'inflation dans les nouveaux Etats membres a été similaire à celle des Douze. Leurs taux ont culminé juste après la seconde crise pétrolière en 1979/80. Ils ont régressé à partir de 1981 et ont atteint leur niveau le plus bas en 1986. Ils ont augmenté de nouveau entre 1987 et 1990 pendant la crise du Golfe pour ensuite diminuer à nouveau. Entre décembre 1990 et décembre 1994, les prix à la consommation ont augmenté de 12 % en FINLANDE, 15 % en AUTRICHE et 21 % en SUEDE alors que l'augmentation moyenne dans l'EUR12 était de 18 %.

#### LE CHÔMAGE DANS L'UE: 10,8 % en décembre

Le chômage dans l'UE\*, corrigé des variations saisonnières, est estimé à 10,8 % en décembre 1994.

Suite à une série de révisions, le taux est en baisse par rapport aux 10,9 % enregistrés en novembre. Les révisions indiquent également maintenant un taux de 10,9 % pour les mois d'août, septembre et octobre. Les derniers chiffres montrent que le chômage a culminé à 11 % mi-94 après quatre années de croissance continue.

Le chômage annuel moyen de l'UE\* est estimé à 10,9 % en 1994 contre 10,5 % en 1993.

EUROSTAT estime qu'environ 17 millions de personnes étaient au chômage dans l'UE au mois de décembre. Ce chiffre, corrigé des variations saisonnières, est établi selon les critères du Bureau International du Travail (BIT).

En 1994, les baisses les plus importantes se sont produites au ROYAUME-UNI (10 % en décembre 93 contre 8,9 % en décembre 94), au DANEMARK (10,4 % contre 9,3 %) et en IRLANDE (18,4 % contre 17,6 %). L'ITALIE enregistre la hausse la plus importante (11,3 % contre 12,2 %).

#### Remarques

Le taux de chômage et le nombre de chômeurs sont estimés selon les recommandations du BIT après correction des différences entre les méthodes nationales de recensement du chômage.

Le taux de chômage est estimé en extrapolant, pour tous les Etats membres, les résultats 1991 de l'enquête communautaire sur les forces de travail. L'introduction des résultats des années suivantes, dès qu'ils seront disponibles, entraînera probablement une révision des estimations mais ne modifiera pas les évolutions récentes. La prise en compte des résultats des enquêtes trimestrielles sur les forces de travail au Royaume-Uni et en Espagne a provoqué une révision significative des résultats publiés précédemment.

#### PRODUCTION INDUSTRIELLE

La production industrielle de l'UE des 12, corrigée des variations saisonnières, a augmenté de 0,3 % de septembre à novembre 1994 par rapport aux trois mois précédents.

En comparaison, la variation est de 2,6 % au JAPON. Aux ETATS-UNIS, elle est de 1 %.

#### Augmentation de 5 % de la production industrielle de l'UE en 1994

Les taux de variation annuels de la production industrielle (1994 par rapport à 1993) peuvent à présent être estimés. Tous les Etats membres ont enregistré des taux de variation positifs, alors que l'année précédente (1993 par rapport à 1992), la production industrielle était nettement orientée à la baisse. Les divers chiffres se présentent comme suit (taux de variation de 1993 indiqué entre parenthèses): UE +5,2 % (-3,2 %), Danemark +10,8 % (-2,9 %), Allemagne +3,5 % (-7,7 %), Grèce +1,6 % (-3,0 %), Espagne +7,0 % (-4,8 %), France +3,2 % (-2,8 %), Irlande +11,2 % (+5,7 %), Italie +6,1 % (-2,1 %), Luxembourg +7,5 % (-3,0 %), Pays-Bas +2,2 % (-1,1 %), Autriche +2,9 % (-2,0 %), Portugal +0,3 % (-4,4 %), Finlande +11,5 % (+5,1 %), Suède +9,7 % (+2,6 %), Royaume-Uni +5,3 % (+2,1 %), États-Unis +5,4 % (+4,1 %), Japon +0,1 % (-4,1 %). Pour la Belgique, aucune estimation ne peut encore être faite.

En consultant les dernières données mensuelles disponibles de la production industrielle de l'UE pour l'année 1994, on constate que la reprise économique est plutôt modérée. L'indice de production de l'UE, corrigé des variations saisonnières, s'est élevé à 101,1 en août, 100,4 en septembre et 100,1 en octobre.

La comparaison trimestrielle (août-octobre par rapport à mai-juillet) donne un taux de variation de l'UE de +1,1 %. Les Etats membres (dans la mesure où les données sont disponibles) ont enregistré les résultats suivants: Danemark -3,5 %, Allemagne +0,4 %, Grèce -0,9 %, Espagne +2,5 %, France +1,3 %, Italie +2,6 %, Pays-Bas +0,7 % (estimation), Portugal 2,2 %, Royaume-Uni +0,8 %.

#### COMMERCE EXTERIEUR

##### LE DÉFICIT COMMERCIAL DE L'UE SE RÉDUIT

Les chiffres publiés aujourd'hui par EUROSTAT, l'Office statistique des Communautés européennes à Luxembourg, indiquent une réduction de 6,3 milliards d'ECU du déficit commercial de l'UE avec le reste du monde durant les six premiers mois de 1994 comparés au premier semestre 1993.

Alors que les importations vers l'UE ont progressé de 10,7 %, la croissance observée pour les exportations atteint 13,8 %.

Les chiffres concernant le commerce entre Etats membres de l'UE confirment l'impression de reprise: au cours du premier semestre 1994, la croissance est proche de 9 %.

##### LES ECHANGES EXTRA-UE 1993/1994

Les exportations de l'UE vers le reste du monde ont augmenté de 13,8 % au cours du premier semestre 1994. Cette progression a été particulièrement soutenue pour l'UEBL (Belgique/Luxembourg) (27,1 %) et l'Irlande (22,4 %). Après avoir stagné en 1993, les importations en provenance du reste du monde ont progressé de 10,7 % entre le premier semestre 1993 et 1994. Comme pour les exportations, l'UEBL (Belgique/Luxembourg) et l'Irlande, ainsi que les Pays-Bas, ont connu une tendance à la hausse plus marquée que les autres Etats membres.

Le déficit commercial de l'UE avec le reste du monde s'est restreint à 3 milliards d'ECU au premier semestre de 1994 contre 9,3 milliards au cours de la même période de 1993.

##### LES ECHANGES INTRA-UE 1993/1994

Dans les échanges intra-UE, une différence entre les «expéditions» – les exportations vers les autres pays de l'UE – et les «arrivées» – les importations en provenance d'autres pays de l'UE – a encore été constatée en 1994. Celle-ci s'élevait à 5 %. En théorie, les deux totaux devraient à peu près s'équilibrer. EUROSTAT pense que les «expéditions» représentent désormais la mesure la plus fiable en raison du nombre plus élevé de réponses de la part des entreprises qui fournissent les données. Néanmoins, les taux de croissance des deux flux entre les premiers semestres 1993 et 1994 ne diffèrent que faiblement: 9,4 % pour les expéditions, 8,3 % pour les arrivées.

Les taux de croissance trimestriels montrent une certaine accélération du commerce intra-UE durant l'année 1994. Les expéditions ont ainsi progressé de 7,6 % au premier trimestre et de 11,3 % au second trimestre par rapport aux mêmes périodes de 1993. En général, cette croissance sensible des échanges intra-UE a été observée dans tous les pays, à l'exception de la Grèce (pour les deux flux) et du Portugal (arrivées).

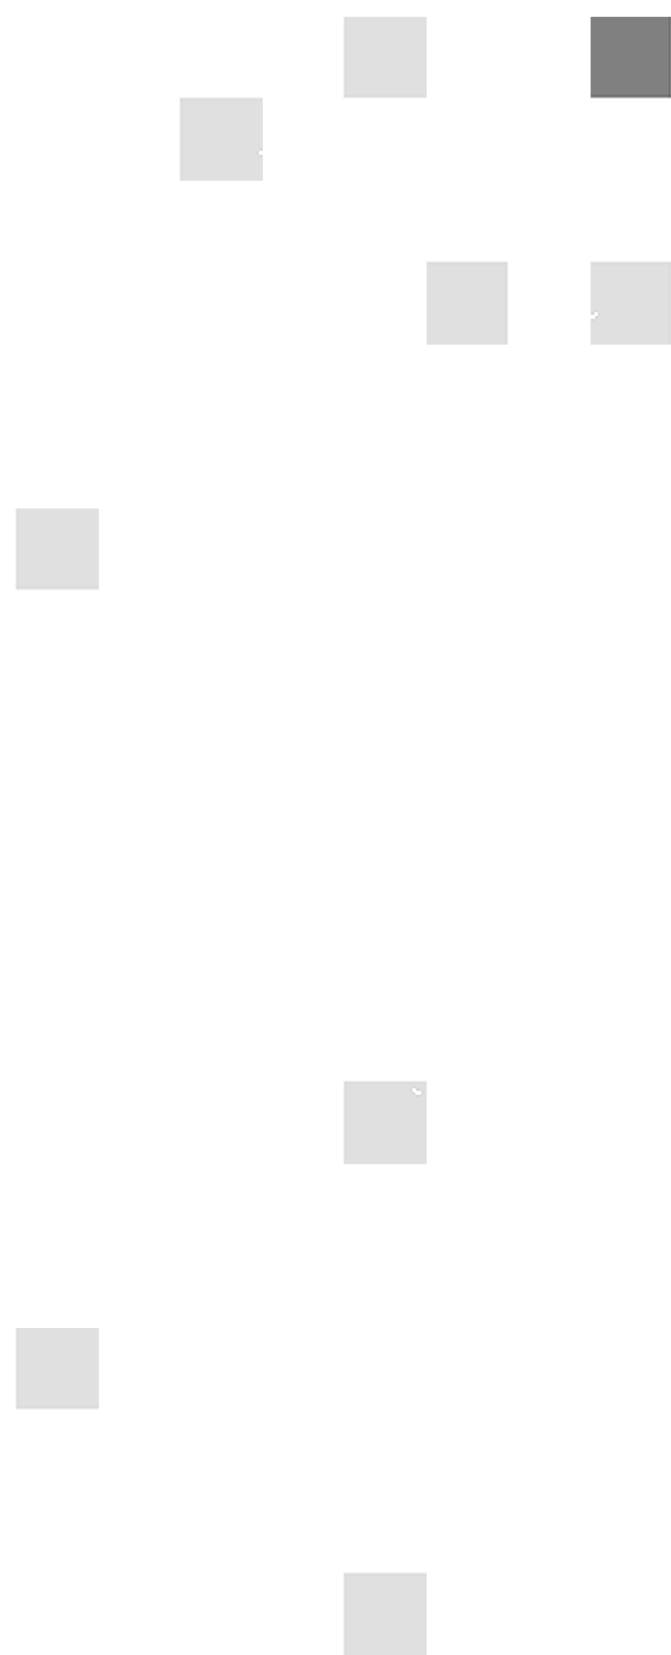

#### Notes de base

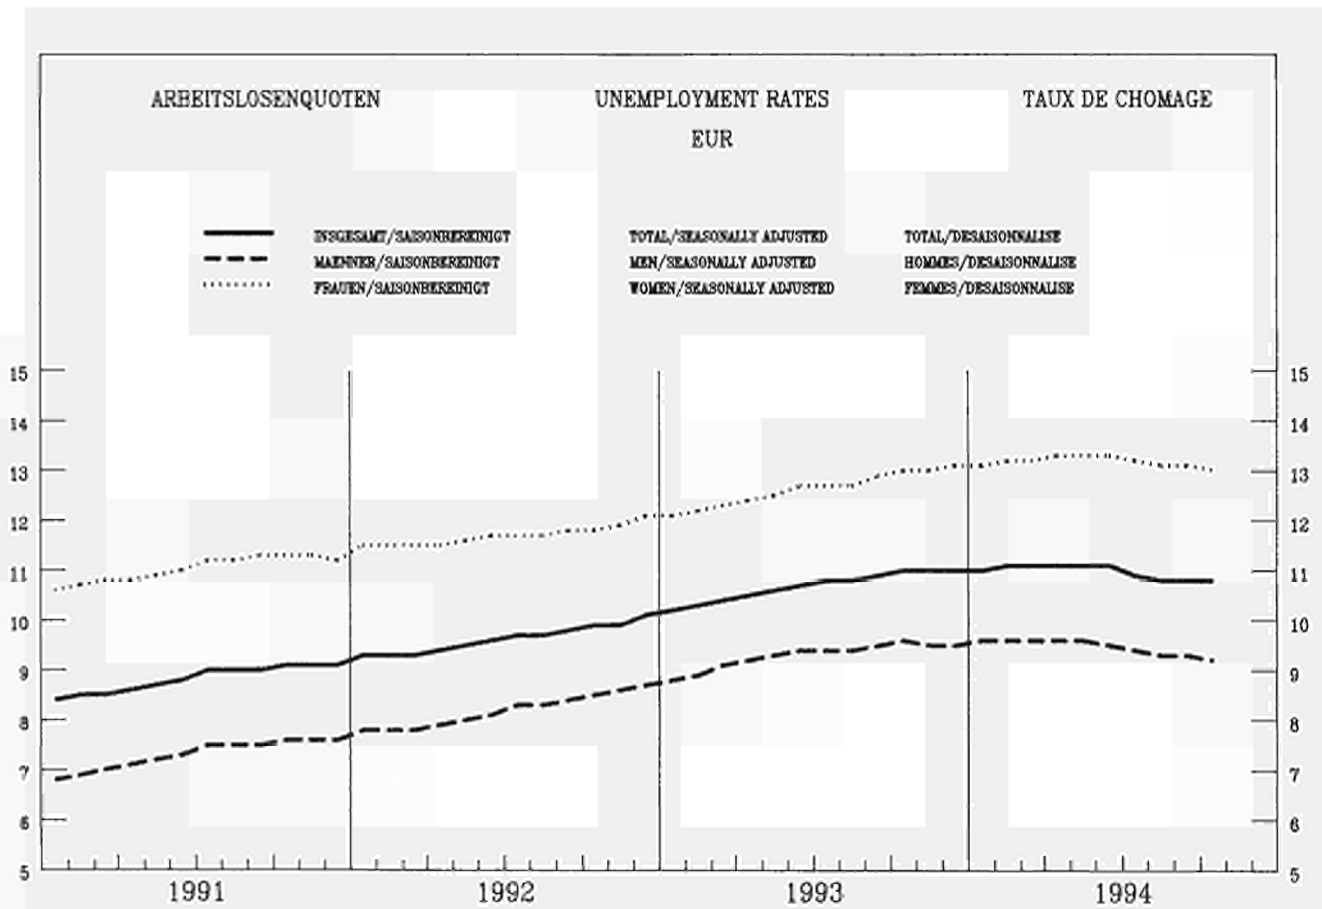

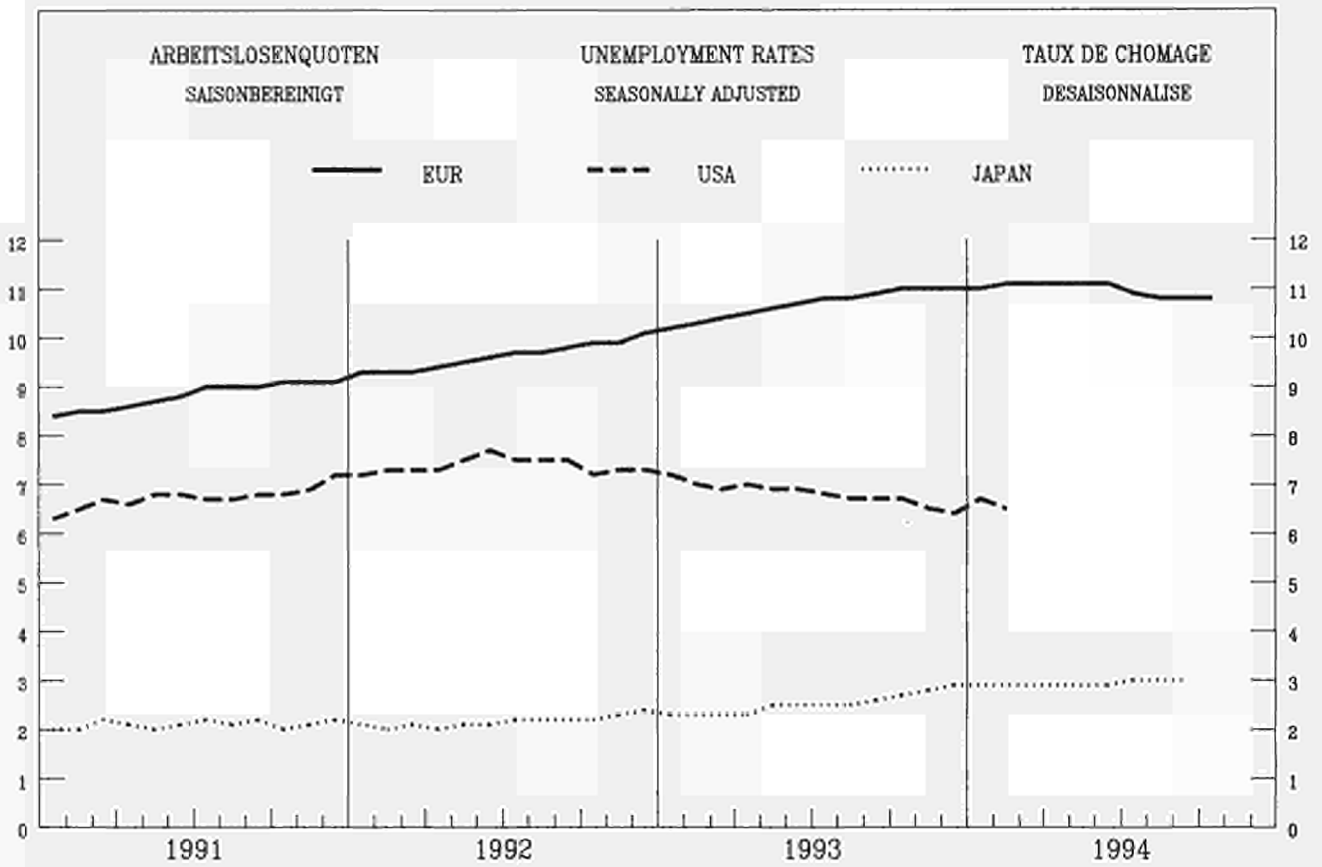

1. INTRASTAT est entré en vigueur le 1<sup>er</sup> janvier 1993, suite à l'abandon des formalités douanières dans l'UE. Au lieu d'être extraits des déclarations en douane, les chiffres sur les échanges sont désormais directement obtenus des entreprises, avec quelques problèmes de non-réponse. En outre, des délais plus importants dans l'établissement des statistiques des échanges intra-UE sont apparus et continuent d'exister dans certains Etats membres.

2. Du fait de la non-réponse, les chiffres pour les échanges intra-UE doivent tout particulièrement être interprétés avec prudence. Ils sont soumis à de fréquentes révisions.
