

# Quarterly national accounts – ESA

3 □ 1990      Quarterly

*First quarter of 1990: GDP +1.4%, inflation +1.2%: positive trends in the Community economy*

*The first quarter was marked by a considerable increase in GDP (+1.4%), the highest since the second quarter of 1986, and by a slowdown in inflation (+1.2%). The favourable trend in GDP would seem to confirm the expectations of operators, who are confident that the current phase of expansion will continue.*

*As regards inflation, it is worth noting that the lower rate of price rises bears out those who argued that the increase in inflation during the previous quarter was only transitory. The rate would have been even lower if there had not been a significant increase in the implicit deflator of German public consumption caused by the renewal of public-sector contracts.*

*On the uses side, the most important development in the first quarter of 1990 was the record increase in investments (+5.3%), which must be interpreted with some caution owing to the technical problems referred to below. There was continued expansion in private consumption (+1.5%) and a noticeable upturn in public consumption (+0.8%).*

*As regards the figures for the individual Member States, there was an improvement in international trade in goods and services for the Federal Republic of Germany and France, with exports (+8.2% and +3.3% respectively) increasing more than imports (+5.2% and +2.2%). In the United Kingdom, however, imports increased more than exports for the first time for several quarters (+5.5% and +1.8% respectively), while Italy was the only country to see a slight drop in exports (-0.3%), probably due to the increase in the value of the lira in the EMS. On the supply side, GDP rose by a remarkable 3.1% in Germany, while there was a slight slowdown in the United Kingdom.*

*Among the components of domestic demand, there was a considerable increase in investments in all the countries. In Germany they grew by 13.6%, but this figure is partly explained by the technical problems of seasonally adjusting housing investments.*

*Private consumption continued to rise fairly steeply, especially in Germany (+2.5%), while collective consumption revived in all the countries except the United Kingdom, where there was a slight drop (-0.1%). There was a slight slowdown in inflation in Italy and the United Kingdom (+1.7% and +1.6% respectively) and in particular slight deflation in France (-0.1%), caused essentially by the considerable drop in the deflator of non-market GDP.*

*In the United States the phase of relative stagnation continued (+0.3%), accompanied by a significant resurgence in inflation (+1.4%). Among the components of GDP, there was a marked recovery in investments (+1.8%) accompanied by a noticeable increase in private consumption (+0.6%).*

*In Japan the first quarter of 1990 saw a positive trend in GDP (+2.5%), accompanied by slight deflation (-0.3%). As regards the components of GDP, there was an overall slowdown, with investments - although remaining high (+2.4%) - being the most affected.*

## EXPLANATORY NOTES

This publication shows quarterly and, for comparison, annual growth rates for the main aggregates of national accounts, in volume and price terms, for some Member States (Federal Republic of Germany, France, Italy, United Kingdom) and major trading partners of the Community (United States and Japan).

To facilitate analysis of short-term trends, movements in the aggregates showed in the tables of this bulletin are expressed in growth rates compared with the previous period.

### Source of data

The annual data are extracted from the aggregates figures obtained by Eurostat from the National Statistical Offices of the Member States, the United States and Japan by means of a harmonized questionnaire (ESA) in November of each year. The data marked with an asterisk (\*) are forecasts published by the Commission (DG II) three times a year, in February, May and October.

The quarterly data are taken from purely national sources, and follow the general concepts, definitions and methods of seasonal adjustment used in their country of origin. Users should be aware that, owing to this lack of harmonization, the aggregates for the various countries given in this publication may not be totally comparable.

Eurostat is currently using only the expenditure measure of GDP. It should however be noted that some countries, such as the United Kingdom, estimate and publish GDPs based on more than one measure.

### Community total

The Community total for each aggregate is derived by totalling the data for the available countries converted into a common unit using purchasing power standards (PPS). For the quarterly aggregates, the Community total is the sum of the seasonally adjusted values of the four largest Member States (D, F, I, UK). These four countries accounting for only approximately 80 % of the GDP of the Community of Twelve, when referring to the Community it is not appropriate to use the definition of EUR 12 but to call it simply EUR. (It must however be said that the annual data which are in the tables, are EUR 12 data).

### Publications and storage of the data

The annual data are published each year in the volume 'National Accounts ESA - Aggregates'. They are also available, via servers, from Eurostat's Cronos data base, SEF:SEC1. The quarterly data are also stored in Cronos SEF:ICG.

For all information on annual and quarterly aggregates, contact Eurostat in Luxembourg, tel. 4301-4351.

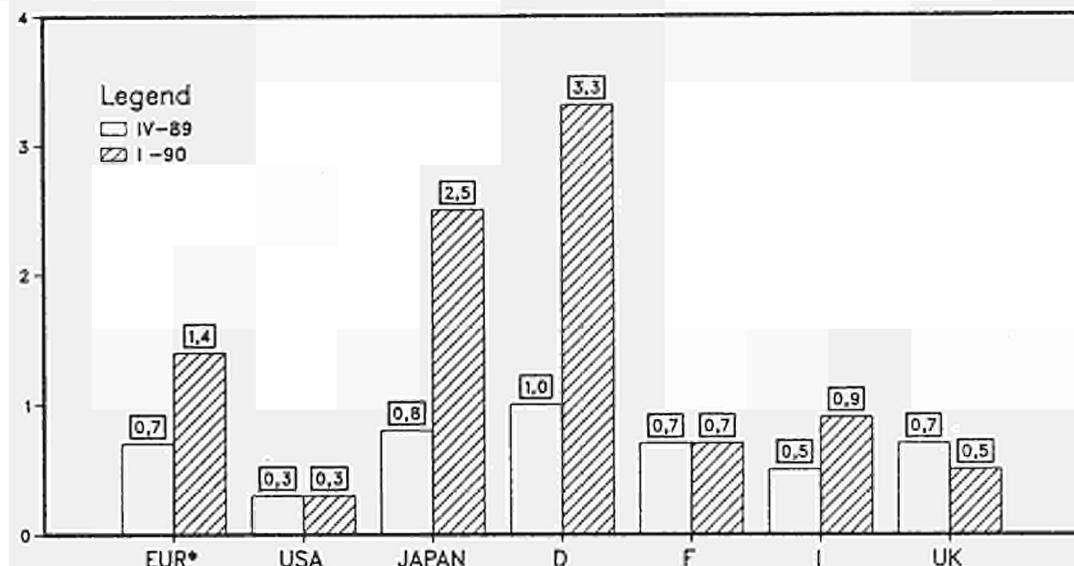

For all information on access to the Cronos data base, contact Eurostat in Luxembourg, tel. 4301-4567.

Requests for a subscription to this bulletin should be sent to the Office for Official Publications of the European Communities, L-2985 Luxembourg.
