

## Quarterly national accounts – ESA

4 □ 1990      Quarterly

*Second quarter of 1990: GDP unchanged, inflation +1.3%: period of stagnation for the Community economy.*

*For the Community economy as a whole, the second quarter of 1990 was characterized by the first pause in economic growth since 1987 (GDP +0.0%), accompanied by a slight increase in inflation (+1.3%). This period of stagnation can be explained by both the general slow-down in the world economy (especially in the United States) and the tendency of economies to consolidate following periods of strong growth, such as that recorded during the first quarter of 1990. The rise in inflation was caused mainly by unforeseen, external factors. Consequently, any talk of continued expansion will need to wait until analysts have seen how the Community economy reacts to a possible round of oil price increases, the slow-down in the world economy and the marked fall in the value of the dollar. This last factor could, at least partially, lead to a slower increase in the price of imports.*

*With regard to domestic demand, the main feature of the second quarter of 1990 was the noticeable fall-off in investments (-2.9%) together with the appreciable slow-down in private consumption (+0.7%) and public consumption (+0.8%).*

*As regards the figures for the individual Member States, in the case of international trade in goods and services there was a considerable drop in exports in the Federal Republic of Germany and France (-3.1% and -3.9% respectively) accompanied by a less pronounced decline in imports (-0.3% and -0.8% respectively). However, in the United Kingdom and particularly in Italy, the growth in exports (+0.1% and +4.0% respectively) was more marked than for imports (-1.0% and +2.1% respectively). As regards inflation, it should be noted that the rate of increase slowed down in the United Kingdom (+0.7%), but rose sharply in France (+1.3%) after having been stable during the first quarter. On the other hand, the increases were more moderate in the Federal Republic of Germany (+1.2%) and Italy (+1.8%), where it nevertheless remained rather high.*

*Among the components of domestic demand, there was a general fall in investments which was most marked in the Federal Republic of Germany and the United Kingdom (-7.2% and -3.1% respectively). This was at least partly due to the anomaly in housing investment trends observed over the last two years in the northern countries. Consumption, both private and public, slowed down in every country except the United Kingdom, where both rose again (+1.0% and +2.5% respectively).*

*In the United States, the period of stagnation continued (GDP +0.1%) and the rate of inflation remained stable (+1.2%). Among the components of GDP, there was a marked fall in investments (-1.7%) accompanied by substantial growth in public consumption (+1.5%).*

*Economic growth in Japan slowed down considerably during the second quarter of 1990, but still remained at a fairly high level (+0.9%), while inflation increased (+0.9%). Among the components of GDP, there were rises in private consumption (+1.4%) and especially in investments (+3.7%).*

## EXPLANATORY NOTES

This publication shows quarterly and, for comparison, annual growth rates for the main aggregates of national accounts, in volume and price terms, for some Member States (Federal Republic of Germany, France, Italy, United Kingdom) and major trading partners of the Community (United States and Japan).

To facilitate analysis of short-term trends, movements in the aggregates showed in the tables of this bulletin are expressed in growth rates compared with the previous period.

### Source of data

The *annual data* are extracted from the aggregates figures obtained by Eurostat from the National Statistical Offices of the Member States, the United States and Japan by means of a harmonized questionnaire (ESA) in November of each year. The data marked with an asterisk (\*) are forecasts published by the Commission (DG II) three times a year, in February, May and October.

The *quarterly data* are taken from purely national sources, and follow the general concepts, definitions and methods of seasonal adjustment used in their country of origin. Users should be aware that, owing to this lack of harmonization, the aggregates for the various countries given in this publication may not be totally comparable.

Eurostat is currently using only the expenditure measure of GDP. It should however be noted that some countries, such as the United Kingdom, estimate and publish GDPs based on more than one measure.

### Community total

The Community total for each aggregate is derived by totalling the data for the available countries converted into a common unit using purchasing power standards (PPS). For the quarterly aggregates, the Community total is the sum of the seasonally adjusted values of the four largest Member States (D, F, I, UK). These four countries accounting for only approximately 80 % of the GDP of the Community of Twelve, when referring to the Community it is not appropriate to use the definition of EUR 12 but to call it simply EUR. (It must however be said that the annual data which are in the tables, are EUR 12 data).

### Publications and storage of the data

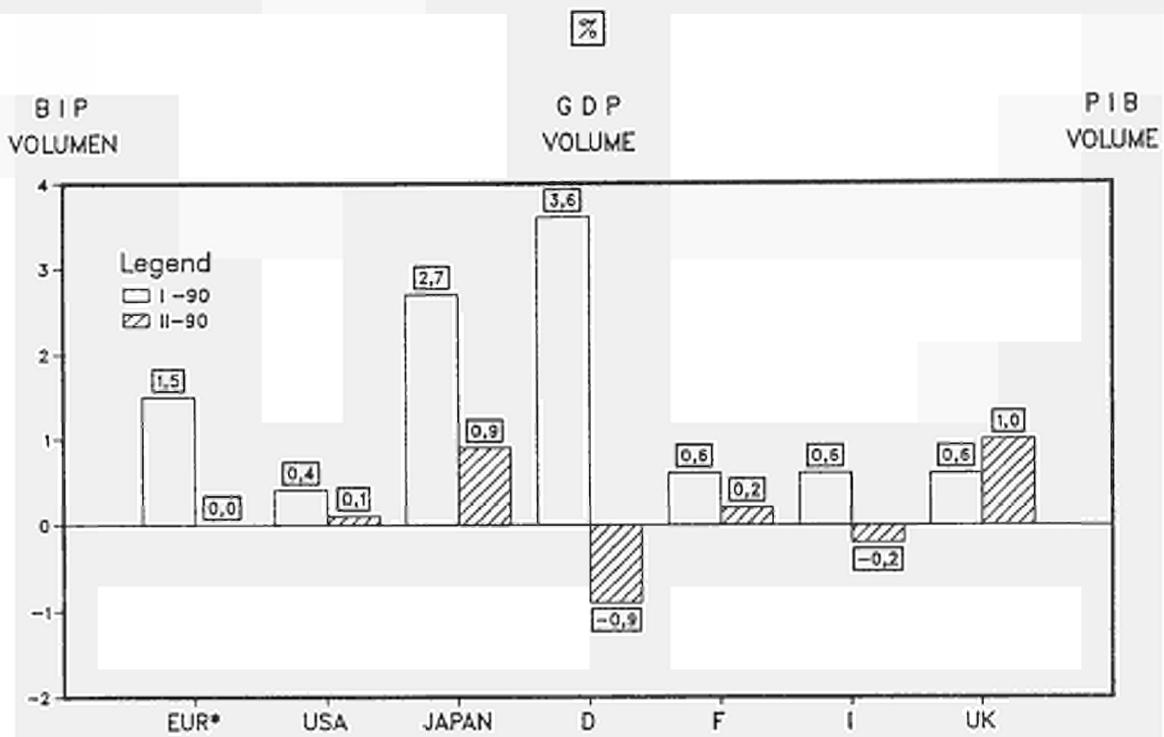

The annual data are published each year in the volume '**National Accounts ESA - Aggregates**'. They are also available, via servers, from Eurostat's **Cronos** data base, SEF:SEC1. The quarterly data are also stored in **Cronos** SEF:ICG.

For all information on annual and quarterly aggregates, contact Eurostat in Luxembourg, tel. 4301-4351.

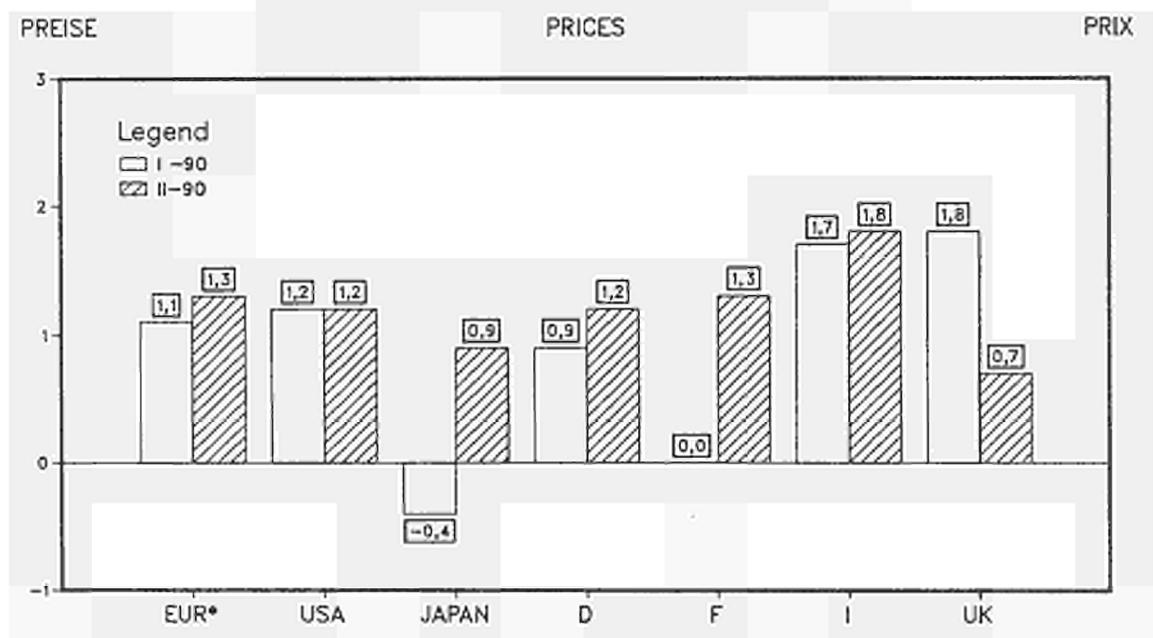

For all information on access to the Cronos data base, contact Eurostat in Luxembourg, tel. 4301-4567.

Requests for a subscription to this bulletin should be sent to the **Office for Official Publications of the European Communities, L-2985 Luxembourg**.
