(1)Bei den Swappgeschäften wird der Wert der beim EFWZ hinterlegten Reserven wie folgt festgesetzt:

-Für den Goldanteil der in Ecu umgerechnete Durchschnittswert der während der vorangegangenen 6 Monate täglich bei den beiden Londoner Fixings ermittelten Preise, welcher jedoch nicht über dem Durchschnittspreis der beiden Fixings vom vorletzten Arbeitstag der Periode liegen darf; Fixings vom vorletzten Arbeitstag der Periode liegen darf;

-Für den US-Dollar-Anteil der 2 Tage vor dem Tag der Wertstellung erzielte Marktkurs. Die von den Zentralbanken für die Erfassung ihrer Gold- und US-Dollar-Reserven in den regelmäßigen Berichten oder Statistiken oder für die Meldung dieser Reserven an internationale Organisationen verwendeten Bewertungsstandards entsprechen nicht unbedingt den oben dargestellten Grundsätzen.

(1) For the purposes of the swap operations, the value of the reserve components contributed to the EMCF are established as follows :

- for the gold portion, the average of the prices, converted into ecu, recorded daily at the two London fixings during the previous six calendar months, but not exceeding the average price of the two fixings on the penultimate working day of the period ,
- for the US dollar portion, the market rate two working days prior to the value date. The valuation standards used by the central banks to report their gold and US dollar reserves in their regular statements or statistics, or to international organisations, are not necessarily the same as those described above.

1)Pour les besoins des opérations de swap, la valeur des éléments de réserve attribués au FECOM est établie comme suit:

- pour la partie or, la moyenne des prix, convertie en écu, enregistrée quotidiennement aux deux fixings de Londres au cours des six derniers mois calendaires, mais n'excédant pas le prix moyen des deux fixings de l'avant-dernier jour de bourse de la période,
- pour la partie dollars US, le taux du marché deux jours ouvrables avant la date de valeur.

Les critères d'évaluation utilisés par les banques centrales pour comptabiliser leurs réserves en or et en dollars US dans leurs déclarations ou statistiques régulières, ou par les organisations internationales, ne sont pas nécessairement les mêmes que ceux décrits précédemment.

- For the past two years and the current year, the table displays the list of the top ten lead managers in ecu issues ranked in descending order. Ranking is determined by the total amount of bonds for which a financial institution acted as bookrunner. The table also indicates the number of issues led by each of the top ten bookrunners and the share of the total amount issued lead-managed by each institution.
NB: Italian CTEs and French OATs and BTANs are not taken into account.

- Top ten ecu issuers

- For the past two years and the current year, the table displays the list of the top ten ecu issuers. It includes all types of ecu bonds (OATs etc. are taken into account) but excludes Treasury bills, loans and other instruments. The top ten borrowers are ranked in descending order is determined by the amount borrowed. The table also displays the number of issues launched by each borrower (fungible issues are counted as many times as the market has been tapped), and the proportion of the amount borrowed by each borrower against the total amount borrowed.

- JP MORGAN total return ecu index

- The JP Morgan Ecu Bond Index measures the actual change in the market value of a portfolio of regularly traded, ecu-denominated, fixed-rate bonds on a daily basis. Indices are market-value-weighted: portfolios are assumed to be composed of bonds in proportion to their respective total market value. The formulas on which the indices are based compute what would happen to an investment, ignoring transaction costs and taxes, if the investor bought and sold the market portfolio over an arbitrary period of time. Mid prices are used for all calculations. The bonds range within a 3- to 10-year maturity band.

The graph displays the EBI total return index for both the triple-A bonds only basket and the non triple-A bonds only basket. Total return means variation in capital value plus coupons received. The index has been calculated daily back to October 1, 1989, with a value of 100 assigned to the total return series on December 29, 1989. Detailed data are available from Eurostat upon request. For more information on the EBI, please see JP Morgan's "Technical document" and "Guide for investors".

¹ Data have been provided by Cedel and Euroclear.

OPERATION RATES OF THE EMCF, ECU INTEREST RATES AND YIELDS, ECU LIBOR RATES

- Operation rates of the EMCF, interest rates and yields of ecu investments

- Operation rates of the EMCF on a monthly basis from January 1989 (the interest rate for transactions in EMCF (European Monetary Co-operation Fund) ecus, is the weighted average of the most representative rates on the domestic money market of the countries whose currencies make up the ecu basket. It is based on the weighting of the currencies in the ecu basket as derived from the ecu central rates in force. The rate thus calculated for a given month applies to EMCF transactions for the following month. In this table, this rate relates to the month upon which the calculations are based and not to the (following) month during which it is used by the EMCF)
- Interest rates for 1, 3 and 6 month and 1 year deposits, calculated on the basis of the Friday London market rates (source: Financial Times, London Money Rates, ecu Linked Deposit Bid).
- Redemption yields of ecu bonds (the bonds are classified according to three types of maturities: under 5 years, from 5 to 7 years and more than 7 years, redemption yields of ecu bonds are calculated each Wednesday from a sample of fixed interest bonds, denominated in ecus and listed on the Luxembourg Stock Exchange. These yields are weighted by the amounts in circulation. (source: Luxembourg Stock Exchange).

(The monthly and yearly averages are the arithmetic means of these weekly interest rates and bond yields)¹

- Ecu LIBOR rates (graph)

LIBOR figures on a daily basis for maturities of 1, 3 and 6 months² (Inter bank rates are quoted bid (to borrow) and offer (to lend). The London inter bank offered rate (LIBOR) is a benchmark, as interest rates on many credit agreements world-wide are set in relation to it)

- Ecu interest rate swaps (graphs)

The graph displays the average yield of ecu interest rate swaps for maturities of 3, 5, 7 and 10 years. Data are on a daily basis and only for weekdays for the last two years and the current year. The swap operations considered are fixed rate versus 6-month ecu Libor (year = 360 days). These data are communicated by inter-dealer broker Finacor.

The graph displays the same information as above but only the last two months and the current month are covered.

- Three month ecu interest rates: theoretical vs actual market rates

The graph displays three month ecu interest rates. Both market and theoretical rates are shown (right hand scale, in %). The spread between market and theoretical rates is expressed in basis points and can be read on the left hand scale.

¹ The same data are available upon request from April 1979 with regard to EMCF rates and interest rates on deposits and from January 1982 with regard to yields on bonds.

² The same data are available upon request from April 1989.
